

House Of Validators Whitepaper

\$HOV — Community, Infrastructure, and Validator Operations on Metal Blockchain

1. Executive Summary

House Of Validators, also known as HOV, is a validator operations community built on the Metal Blockchain ecosystem. HOV was created to support active node operators, educate validators, coordinate network upgrades, and provide infrastructure services for individuals, communities, and future institutional clients.

The \$HOV token represents the community layer of House Of Validators. It is connected to a growing ecosystem that includes validator setup services, operator education, a private Telegram community, NFT collections, node support, and long-term infrastructure expansion.

House Of Validators was not created as a token-first project. It was created from a real operational need: keeping validator operators informed, connected, and prepared during a major Metal Blockchain network upgrade.

2. Origin Story

The founder of House Of Validators had their first Metal Blockchain node coded by Junior, the owner and creator of Chaininfra, on October 23, 2025.

After learning the process, the founder coded their second node on March 19, 2026, and their third node on April 8, 2026. From there, the mission expanded. What began as personal validator operation grew into a larger community effort.

By June 2026, the founder had coded 35 nodes for the Metal Blockchain community, including the 3 validators they personally own.

House Of Validators was born during the recent Metal Blockchain network software upgrade to version 1.13.5, with a deadline of May 25, 2026. During that upgrade, the founder recognized a major problem:

“What if this happens after price appreciation and I have to chase my operators all around the world to upgrade their nodes?”

That question became the foundation of House Of Validators.

3. Mission

The mission of House Of Validators is to create a safe, organized, and educated community for active Metal Blockchain node operators.

HOV exists to help operators:

- Stay updated on network upgrades
- Understand validator responsibilities
- Receive node support
- Learn about the Metallicus ecosystem
- Coordinate during important network events
- Grow as infrastructure operators
- Prepare for future opportunities in blockchain validation

House Of Validators is designed to become a trusted home for validators coded “in house.”

4. The Problem

Validator operators often face several challenges:

- They may not understand required network upgrades
- They may miss important deadlines
- They may not know how to troubleshoot node issues
- They may operate alone without community support
- They may lack education around the larger ecosystem
- They may need help managing VPS, node credentials, staking, and relaunches

As blockchain adoption grows, these problems become more serious. If a network upgrade happens after major price appreciation, node operators may become harder to reach, and missed upgrades could affect validator performance.

House Of Validators was created to solve this coordination problem before it becomes a larger issue.

5. The Solution

House Of Validators provides an organized validator operations community for Metal Blockchain node operators.

The HOV ecosystem includes:

- Private Telegram community
- Node setup services

- Validator support
- Network upgrade coordination
- Operator education
- \$HOV community token
- HOV NFT collection
- Team-based infrastructure support
- Future institutional validator onboarding

Instead of operators working alone, HOV gives them a central place to stay informed and supported.

6. Validator Setup Services

House Of Validators offers node setup services for the Metal Blockchain ecosystem.

The founder has personally coded 35 nodes, including 2 out of the 3 personal validators. The team has also expanded to include additional members who have coded their own nodes and can assist with future client demand.

This gives HOV the ability to support larger validator setup requests as the ecosystem grows.

Future institutional clients may need multiple nodes set up at the same time. House Of Validators is positioning itself to serve those clients with a trained internal team, community support, and guidance from experienced infrastructure operators such as Junior of Chaininfra.

7. The \$HOV Token

The \$HOV token is the community token of House Of Validators.

\$HOV is designed to represent participation, support, and alignment within the HOV ecosystem. It is connected to the broader mission of building a validator-focused community around the Metal Blockchain.

Potential \$HOV utility includes:

- Community participation
- Access to HOV updates
- Validator education
- Ecosystem rewards
- NFT-related benefits
- Holder recognition
- Future staking or reward programs
- Possible future integration into HOV services

\$HOV is not just a meme token. It is a utility meme token connected to a real validator operations community.

8. HOV NFT Collection

The HOV NFT collection adds identity, culture, and community ownership to the House Of Validators ecosystem.

The NFT collection can be used to represent:

- Community membership
- Validator identity
- HOV lore and branding
- Access tiers
- Future rewards
- Operator recognition
- Digital collectibles tied to the HOV story

The NFT collection helps turn House Of Validators into more than a technical service. It gives the community a culture, a visual identity, and a stronger brand.

9. Community Role

The private HOV Telegram group is the operational center of the community.

Inside the group, members can:

- Ask questions
- Receive network updates
- Discuss validator operations
- Learn about Metal Blockchain
- Stay informed during upgrades
- Share node-related experiences
- Discuss the larger Metallicus ecosystem
- Prepare for staking, lending, borrowing, farming, and other financial tools

The goal is to keep node operators educated and connected.

10. Team Growth

House Of Validators began with one founder learning from a mentor. It has now grown into a small infrastructure team.

The founder has attracted additional members who have coded their own nodes and can assist with future validator setup work. This creates the foundation for scaling HOV beyond individual node setup and into a larger infrastructure service provider.

The long-term goal is to have internal help ready when larger contracts arrive, including clients who may need multiple nodes deployed at once.

11. Relationship With Chaininfra

Junior, the owner and creator of Chaininfra, coded the founder's first node and currently operates as a block producer. Junior has coded over 100 nodes for the Metallicus Metal Blockchain ecosystem.

House Of Validators recognizes this mentorship as part of its foundation. The goal is not to compete with experienced builders, but to grow from that foundation and expand validator education, onboarding, and support within the ecosystem.

12. Strategic Development Partnership

House Of Validators was founded on the principles of education, infrastructure, and community. As the organization continues to grow, strategic partnerships will play an important role in expanding the HOV ecosystem.

One of the most important relationships in the foundation of House Of Validators is with Junior, the owner and creator of Chaininfra.

Junior coded the founder's first Metal Blockchain validator on October 23, 2025, providing the initial guidance that helped launch the founder's journey into blockchain infrastructure. Since that time, the relationship has evolved significantly.

What began as mentorship has developed into a strategic partnership focused on the future growth of House Of Validators.

Junior currently operates as a block producer and has successfully coded more than 100 validators within the Metallicus ecosystem. In addition to validator infrastructure, he has demonstrated software development capabilities through the creation of Chaininfra Arcade, a blockchain-based gaming platform.

As of June 5, 2026, House Of Validators and Junior have reached a verbal agreement to work together on future HOV development initiatives. While active development has not yet begun, this partnership represents an important milestone in the evolution of House Of Validators from a validator community into a broader infrastructure and technology organization.

13. HOV Treasury

House Of Validators maintains a dedicated HOV treasury through a WebAuth wallet.

The purpose of the treasury is to support the long-term growth and sustainability of the HOV ecosystem.

Treasury resources may be allocated toward:

- Community development
- Infrastructure expansion
- Website development
- NFT ecosystem growth
- Marketing and branding initiatives
- Validator education programs
- Future software development
- Strategic ecosystem partnerships
- Merchandise development
- Operational expenses related to HOV services

As House Of Validators continues to grow, the treasury will serve as a foundation for funding future opportunities that strengthen the ecosystem and create value for the community.

14. Planned HOV Digital Infrastructure

The next stage of House Of Validators focuses on building a professional digital presence that reflects the growth of the community and the services offered.

The initial development roadmap includes:

HOV NFT Portal

A dedicated landing page for the House Of Validators NFT Collection that will:

- Showcase the HOV Dragon Collection
- Explain NFT utility and community benefits
- Highlight project lore and branding
- Connect users to future NFT releases
- Serve as a central destination for NFT holders

HOV Token Integration

The platform will include direct access to the \$HOV token and provide community members with a simple way to learn about and access the token ecosystem.

This includes integration with the existing \$HOV token listing and future ecosystem resources.

HOV Services Website

A professional services website designed to support current and future clients seeking:

- Validator setup services
- Node deployment assistance
- VPS guidance
- Validator education
- Technical support
- Infrastructure consulting

The website will provide a professional entry point for individuals, businesses, and institutions seeking validator-related services.

HOV Merchandise Store

Future plans include a merchandise section featuring House Of Validators branded products, community apparel, collectibles, and ecosystem-themed merchandise.

Community Hub

The long-term goal is to create a single destination where visitors can access:

- House Of Validators information
- Validator services
- Community resources
- Educational content
- NFT collection information
- \$HOV token resources
- Project updates
- Future ecosystem tools

By creating a unified digital presence, House Of Validators will be positioned to support both existing community members and future growth across the Metallicus ecosystem.
