

Innovation Water System

High-end Italian engineering for the most precious element. Water is origin, balance, memory. It deserves technology that matches its inherent nature.

A Structural Vision of Excellence

Innovation Water System represents a centralized plant solution of absolute excellence, designed to ennoble water at the source of the system and protect every path it takes within the building.

It is not a point-of-use device. It is a structural choice that defines the quality of every moment water comes into contact with living. A decision that transforms the invisible into permanent value.

Every drop that flows through the building carries the imprint of a technology that intervenes not to subtract, but to enhance. An approach that reconciles innovation with respect for the primary nature of the element.

SUBSTANCE

26 kilograms of material, stability, and silence

Authentic Weight

In a market dominated by lightweight casings and synthetic materials, Innovation Water System asserts an elementary truth: authentic quality possesses weight, physical presence, and temporal permanence.

Artisanal Assembly

A 26 kg structure, entirely hand-assembled, ensures absolute continuity of treatment and mechanical integration that precludes any failure over time.

Operational Silence

The total absence of micro-vibrations and structural stability guarantee operation that never disturbs the acoustic balance of even the most refined environments.

Timeless Materials

Copper. Brass. Stainless Steel.

Copper

Selected for its intrinsic antibacterial properties and its ability to interact harmoniously with water without releasing impurities. A noble metal that endures through centuries while maintaining its protective function intact.

Brass

The mechanical resilience of brass guarantees impeccable sealing over time. A material favored by high-precision engineering for its dimensional stability and resistance to wear.

Stainless Steel

The stainless steel structure ensures stability and safety. Water comes into contact exclusively with copper and brass, materials chosen for their natural affinity with water.

No plastic. No resin, no chemical products. Only metals that do not degrade, do not release micro-particles, and do not alter the integrity of water over time.

Do Not Subtract. Enhance.

Innovation Water System does not strip water of its vital elements. It respects the original composition, fully preserves essential mineral salts, and optimizes their bioavailability for the body.

The result is water that maintains balance, harmony, and vitality. A difference immediately perceptible to the palate and touch, reminiscent of the purity of a high-altitude natural spring rather than the standardized anonymity of an industrial process.

It is a superior philosophy: not to intervene to impoverish, but to enhance what nature has already perfectly calibrated.

Architectural Integration and System Protection

1

Strategic Placement

Installed immediately downstream of the main meter, the system operates upstream of the entire domestic water system, serving as the primary protective barrier.

2

Infrastructure Preservation

It protects pipes, boilers, appliances, and high-end faucets from limescale deposits, corrosion, and premature deterioration.

3

Real Estate Value

A silent investment that maintains the technical efficiency, aesthetic appeal of the systems, and the patrimonial value of the property in the long term.

Excellence Without Environmental Compromise

Zero Energy Consumption

The system operates by natural flow, requiring no electrical power. A principle of absolute efficiency that eliminates all waste.

No Water Waste

Unlike reverse osmosis systems, it produces no wastewater. Every liter entering becomes a usable resource.

Essential Maintenance

Replaceable filters are readily available on the market and can be changed independently, without the need for specialized technical interventions.

Plastic Elimination

The choice of metallic materials completely eliminates the use of PET bottles and drastically reduces the overall environmental footprint.

Lifetime Warranty

A Commitment That Endures Forever

Innovation Water System is not merely a product; it is a legacy. Backed by a Lifetime Warranty, it is engineered to transcend time, a generational companion that instills serenity and trust.

This perpetual guarantee is our signature.

It is the sole declaration that honors its essence: a flawless fusion of structural integrity, the sublime quality of its materials, and unwavering confidence in our avant-garde engineering.
