Under BWF Envirotec's Filter Bag making standards, supported by precision of German made machineries, we are able to produce custom made filter bags and deliver in short time.

As after sales service, PT. Multi Metalindo Murni will also hold technical discussions assisted by the BWF Envirotec technical team

- Aiming to achieve an optimal solution.

Leakage Test: FLUORESCENT POWDER

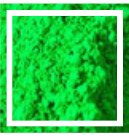

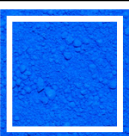

How does it work?

Fluorescent powder is injected into the raw gas stream of the dust collector, with UV-lamp it is then used to inspect and find the weak spots.

Fluorescent Powder is used to detect tears, holes and leakages in dust collector (filter bags, cartridges, cell plate). It is also used to ensure proper installation of new filter bags or filter cage.

PT. Multi Metalindo Murni has ready stock of fluorescent powder with different colours:

Colour		Suitable for	Not suitable for
	Pink	All applications	-
	Green	Power Plants, Aluminium Industry, Cement Industry, Lime Industry,	-
	Yellow	All applications	Cement, Lime, Asphalt and Aluminium Industry, Power Plants
	Orange	All applications	
	Blue	-	Combustion processes without absorption
