

Ultra Violet Water Filter

Ultra Violet Water Filter System is ideal for filtration of Bore well and Well water. It is a 3-in-1 filter system.

It has a 10 micron filter cartridge which removes all visible dust particles. The water then flows through an activated Carbon Cartridge which removes chemicals and odour. Then the water flows through the UV chamber where two UV lamps are provided. They help to eliminate bacteria , germs, pathogens etc.

The filter can process about 500 litres of water per hour. It can be connected to an overhead tank and the water will flow through it by gravity. There is no need for pumps.

It is wall mountable and easy to assemble. It requires very little maintenance and is user serviceable.

It is an ideal unit for Soda / Soft drink makers, juice processing factories, hostels, hotels, etc. and wherever bulk drinking water is required
