

### **AUTOMATIC CARBONATOR EKTA SUPER MODEL (Approx. 2000 LPH)**

The Automatic Carbonator is used to mix water, syrup, and CO<sub>2</sub> to produce soda water, sparkling water, and flavored soft drinks. It is ideal for the beverage industry and available in various specifications as per client requirements.

The machine is manufactured using high-quality SS 304 stainless steel with an insulated carbonator tank to maintain internal temperature and a special SS outer cover for safety. All contact parts are made of food-grade stainless steel, fully polished, and compliant with international beverage machinery standards. Special pressure gauges are provided to monitor CO<sub>2</sub> pressure in the tank and regulator.

It features an auto level control panel with manual and automatic modes, along with a dual mixing system suitable for PET and glass bottles. Equipped with a 1.5/2 HP motor and agro spiral pump, it ensures smooth pumping and stable operation. The machine is easy to operate, adjustable for production capacity and mixing ratio, and delivers uniform, high-quality soda. Its closed hygienic structure makes it safe, durable, and easy to clean.
