Ice Gola Machine

The Ice Gola Machine is a handy table top machine for shredding ice for making Ice Gola. The machine is hand operated and easy to use. It can be installed on a table in a road side shop or on a cart. A chunk of ice is held between the top and bottom plates and held tightly by turning the top wheel. Now when the wheel on the left hand side is manually rotated, the ice rubs against a blade fitted on the bottom plate and shavings of ice fall below. These are collected and made into Gola. The machine is made entirely of Cast iron and is very sturdy.
