

Rinser with 24 Cups – for Glass Bottles

This unit is meant for rinsing 24 glass bottles at a time. It can be fitted on top of a cement/plastic or SS Tank. It has 24 nozzles fitted on SS pipes and connected to a central pipe with ball valve which is connected to a water source like overhead tank or pump. All contact parts are SS 304.

24 Bottles are kept upside down in the rubber cups. When the ball valve is opened, water jets into the bottles and rinses them. The rinse water falls back into the tank below and can be drained or recycled as required. About 48 bottles can be washed in a minute depending on the speed of the operators.

The unit requires very little maintenance. Generally the rinser is meant for 200 ml/ 250 ml /300 ml soda / soft drink bottles. But it can be altered to clean bottles of other shapes and sizes.
