

Single Head Goli Bottle Filler – Manual MGI Goli Bottle

Filler is a simple easy to use machine. This is a single head filler. It is connected to a Carbonator with the help of a hose provided. One Goli bottle is kept between the filling head and bottle table by pressing the long lever. It is held there by a spring. The filling head is turned up side down and the filling lever is pressed, Once the bottle is filled, the bottle is taken off by pressing the long lever again. The machine requires very little maintenance restricted to change of head washer and O rings inside the filling head. This can be done by user. About 6-8 bottles can be filled per minute depending on the speed of the operator. A shift valve is provided to release excess pressure to reduce bottle breakage. A half round cover is provided to avoid injury to operator due bottle breakage during filling. The stand of the machine is of MS (powder coated) and all the contact parts of the machine are SS 304.
