Three Bottle Goli Soda(CODD) Bottle Machine Manual / Motorised

The Three Bottle Goli Soda Machine can Carbonate three bottles at a time. It is a very robust table top manually operated machine. The machine is made out of Cast Iron to last many years. The machine is supplied with a pressure guage, CO2 Regulator, CO2 control valve and a copper pipe to connect it with a CO2 gas cylinder. The unique design and method of use ensures a very strong soda. The front door of the machine is opened and three filled bottles are placed on the three bottle tables provided. The bottle tables are locked from beneath. The door is closed. The CO2 valve is opened and the handle on the right side is turned several times. As the chamber rotates, CO2 mixes with the drink. The more it is rotated, the more the CO2 mixes with the liquid and stronger the soda. The door is then re-opened and the bottles are taken off. The machine can also be supplied with a 1/2 HP 1 ph motor and suitable gear box to rotate it automatically. A control panel with a timer is provided for setting the rotation time. About 3-6 bottles can be carbonated per minute depending on the speed of the operator. Soda and soft drinks can both be made.
