

Regulation of Health and Social Care Services

Self-assessment Tool

Preparedness planning and Infection prevention and control assurance framework for registered providers

September 2020

Introduction

This self-assessment tool has been developed by the Chief Inspector of Social Services within the Regulation Directorate of the Health Information and Quality Authority (HIQA). Its purpose is to aid registered providers of designated centres for older people and for people with disabilities to critically assess their preparedness, contingency and outbreak management plans to assure themselves that the infection prevention and control practices in their centres are safe.

It is organised according to the themes and standards contained in the *National Standards for infection prevention and control in community services* (2018).

When completing this self-assessment, providers must consult our *COVID 19, An* assurance framework for registered providers - preparedness planning and Infection prevention and control measures Guidance; the Health Act 2007 (as amended) and associated regulations, and relevant national standards for residential centres for older people and for people with disabilities.

The *National Standards for infection prevention and control in community services* are organised into two overarching sections which we term 'dimensions'. These are the dimensions of:

- 1. Capacity and capability.
- 2. Quality and safety.

In each of these dimensions are what we call 'themes', or aspects of care. In this self-assessment, you will see a series of statements relevant to each of the eight themes in the *National Standards for infection prevention and control in community services*.

Under each theme, please tick 'Yes' or 'No' to these statements and provide additional information, if required, in the space provided. When complete, you will be asked to make a judgment about your performance against the national standards under that particular theme.

Judgment descriptors

The following Table 1 shows the levels of compliance — which we term 'judgment descriptors' — which are used to assess performance against each of the eight themes under the standards. During this self-assessment you will be asked to select the descriptor which most accurately describes how you are meeting the standards under each of the themes.

Table 1. Judgment descriptors to assess performance against each of the eight themes under the standards

improvement commitment to quality	eeting the standard	opportunities for improvement
national standards. Good practice in infection prevention and control is promoted. As a result, there is clear evidence of positive outcomes for residents. In the event of an outbreak, the provider has systems in place to detect, respond and manage an outbreak.	Thile the service is making forts to meet the national andards, there is still arther improvement equired. There are gaps in fection prevention and ontrol measures. In the vent of an outbreak, the rovider could not be extain that the systems in ace would ensure timely exection, response and anagement of an utbreak.	The service has not made any substantive effort to meet the national standards. Infection prevention and control practices and measures do not promote a safe environment. In the event of an outbreak, the provider could not quickly and effectively detect, respond and manage it, thus resulting in significant risk to residents.

Mirroring the standards, the self-assessment is divided into two overarching sections which we term 'dimensions'. These are:

- 1. Capacity and capability
- 2. Quality and safety.

The statements for assessment by providers are set out on the following pages against each of these two areas.

While you are required to complete the self-assessment, you are not required to submit the completed self-assessment to the Chief Inspector unless specially requested to do so. Inspectors may, however, ask to review the completed self-basement while on inspection.

You are required to update this self-assessment every **12 weeks**.

Dimension: Capacity and capability

Theme 5: Leadership, Governance and Management		
Standard 5.1	The service has clear governance arrangements in place the sustainable delivery of safe and effective infection prand control and antimicrobial stewardship.	
Standard 5.2	There are clear management arrangements in place to educe delivery of safe and effective infection prevention and coantimicrobial stewardship within the service.	
Standard 5.3	There are formalised support arrangements in place to educe delivery of safe and effective infection prevention and contimicrobial stewardship.	
Standard 5.4	Staff are empowered to exercise their professional and presponsibility for safe and effective infection prevention practices and antimicrobial stewardship practices.	
Standard 5.5	Service providers ensure that externally contracted agento safe and effective infection prevention and control pra	
_	ce structures in place ensure regular, timely review of ess and quality of infection prevention and control	Yes No

A person with	overall responsibility for the management of infection	Yes
prevention an	d control within the centre is identifiable.	No
There is an in	ternal and external communications strategy.	Yes
		No

The roles and responsibilities of staff are clearly defined and staff understand their individual and collective responsibilities. Staff know the provider contingency arrangements in the event that key management positions are vacant due to unexpected leave. Staff know how to escalate infection prevention and control-related risks. The provider is assured through staff supervision, monitoring and review that managers and members of staff understand their infection prevention and control responsibilities. There is a system in place to monitor and report on infection prevention and control activities, including the identification of opportunities to improve the safety and quality of the care and support provided. There are clear and effective risk management arrangements in place to: identify manage review, and address and learn from Infection prevention and control risks and outbreaks in the centre. There are policies, procedures and guidance in line with HSE, HPSC, rish and European legislation to guide staff in the effective implementation of good infection prevention and control practices. There is a clear escalation strategy in place and staff know how to access to: HSE crisis management teams Specialist staff with expertise in infection prevention and control Healthcare advice; for example, in relation to general practice, end-of-life care and psychiatry Screening services. The contractual or service level agreements with external services adhere to the centre's infection prevention and control measures. No All notifiable diseases are notified to the relevant authorities.

Theme 6: Workforce		
Standard 6.1	Service providers plan, organise and manage their workforce to meet the services' infection prevention and control needs.	
Standard 6.2	Service providers ensure their workforce has the contraining and support to enable safe and effective in prevention and control and antimicrobial stewards	nfection
There are deputising arrangements in place for the ongoing management of the centre and in the event that the person in charge and other key managers are unable to work. Yes No		
Staffing levels are maintained at levels that can safely meet the service's ongoing infection prevention and control needs and activities, including out-of-hours and deputising arrangements, that ensures the continuity of care for residents.		Yes No

In determining the skill-mix of staff, the provider has specifically	Yes
considered the COVID-19 infection prevention and control needs of the service.	No
There are on-call arrangements for staff, and these have been	Yes
tested and are effective.	No
Staff have access to education and suitable training in infection	Yes
prevention and control appropriate to their role and in line with national, HSE and HPSC COVID-19 guidance.	No
The provider has identified and developed the skill set of staff	Yes
with an interest in infection prevention and control.	No
The provider has good arrangements in place to assess the	Yes
impact and effectiveness of the staff training provided.	No
The health surveillance measures in place for the early detection	Yes
of infections in staff are supervised and audited.	No
There are signposting arrangements in place for staff to seek	Yes
advice on all aspects of infection prevention and control.	No
There are effective documented arrangements in place to meet	Yes
staff occupational health requirements, including for staff to avail of vaccinations.	No
Staff understand the infection prevention and control restrictions	Yes
and staff allocation and zoning measures to be put in place during an outbreak (suspected and confirmed).	No
