#### General description

Di-Cumyl Peroxide is a high-purity organic peroxide widely used as a polymerization initiator and crosslinking agent in the production of polyethylene, polypropylene, elastomers, and thermoset resins. It appears as white crystalline solid with excellent thermal stability.

#### Properties

Property	Value
Name	Di-Cumyl Peroxide
Appearance	White Crystals
Assay (Purity)	≥ 99%
Molecular Weight	270.4 g/mol

## Storage and handling:

- Store in a cool, dry, well-ventilated place, away from sources of heat or ignition
- Handle with appropriate PPE and follow all safety guidelines for organic peroxides
- Shelf life dependent on storage conditions; generally recommended to use within 6-12 months
