Mahindra 3-point lift lever extension

This lift handle extension should only be used with the latest OEM lift handle design.

My tractor was purchased in 2020 and had the old design. Adding an extension caused it to flex and bend.

The new lever part# is 16705062205GB

Mahindra 3-point lift lever extension

**If you change the lift handle,
the seat and seat platform
must be removed.
FYI... The seat is heavy.**

**I would not recommend
removing both as one piece.**

Mahindra 3-point lift lever extension

The handle extension fits over the existing lever.

The rubber handle is removed from the old lever and installed on the extension using the same Phillips screw.

Do this before installing on the tractor.

Bolt left loose for demonstration purposes

Mahindra 3-point lift lever extension

Slide extension over the existing lever.

There is a bolt and nut that pass through the original lever handle screw hole to keep the extension in place.

Use additional bolt to locate original screw hole. Install nut on this bolt finger tight.

The old lever is “sandwiched” in place with 4 bolts and nuts on the extension.

Tighten all 5 nuts and bolts
