About us

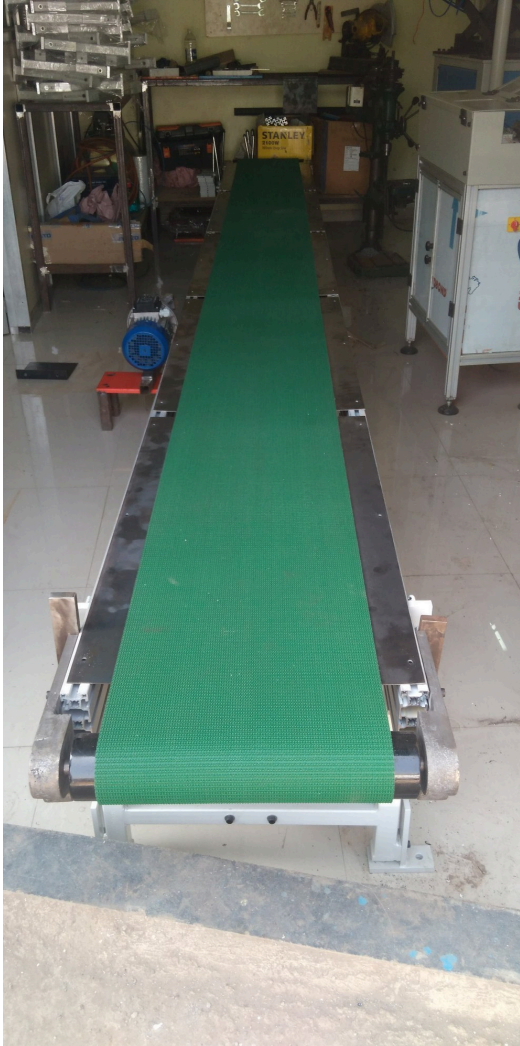

Ikon Industries is a leading force in industrial manufacturing, backed by over 40 years of expertise and a reputation for excellence. We specialize in delivering high-performance, precision-engineered solutions including Conveyor Belt Systems, Axial Air Systems, CNC Machined Components, Micro Precision Components, Idler and Conveyor Rollers, Die Sets, Rubber Moulded Products, Springs, Industrial Fabricated Products, and Customised Metal Parts.

Our commitment to innovation and quality has allowed us to successfully cater to a wide range of industries such as pipe manufacturing, apparel and footwear production, machinery and equipment manufacturing, furniture, food processing, and pharmaceuticals, among many others.

At Ikon Industries, we understand the critical role our components play in your operations, which is why we prioritize quality assurance at every stage and ensure timely delivery without compromise. With decades of trust behind our name, we continue to provide our clients with reliable, tailor-made solutions that drive efficiency and growth in their businesses.

Our Products

Conveyor Belt Systems

We manufacture high-performance Conveyor Belt Systems using premium materials for durability and smooth operation. Built to support industries like manufacturing, food processing, pharmaceuticals, footwear, apparel, furniture, and packaging, our systems are designed for efficiency and reliability. We offer a range of solutions including roller, belt, chain, flat-top, incline, and modular plastic conveyors, all customizable to your specific needs for optimized workflow and productivity.

Axial Air Systems

We offer robust and energy-efficient Axial Air Systems designed for high-volume airflow and consistent performance. Built with top-grade components, our systems are ideal for HVAC, manufacturing, food processing, pharmaceuticals, textiles, chemical plants, and ventilation-intensive industries. We manufacture various types including tube axial fans, vane axial fans, bifurcated fans, and customized duct-mounted axial fans, tailored to meet specific industrial requirements. Our axial systems ensure superior air movement, low noise, and long-lasting reliability.

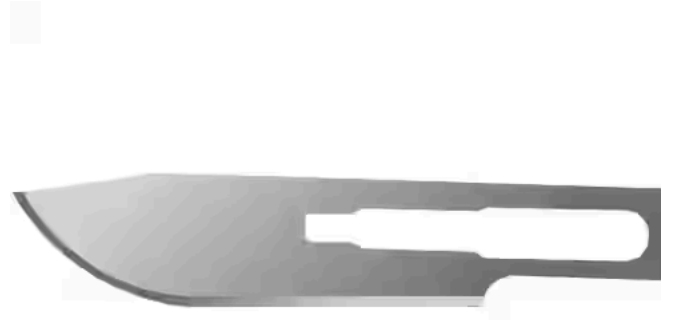

CNC Machined Components

We deliver high-precision CNC Machined Components crafted with advanced machining technology and strict quality control. Designed for accuracy, strength, and consistency, our components serve industries like automotive, machinery, aerospace, electronics, medical devices, and industrial equipment.

We manufacture a wide range of CNC parts including turned components, milled parts, threaded inserts, housings, shafts, and complex custom parts, all tailored to meet exact specifications. Our commitment to precision ensures optimal performance in every application.

Micro Precision Components

We specialize in manufacturing ultra-precise Micro Precision Components that meet the most demanding tolerances and intricate design requirements. Built for reliability at micro scales, our components are widely used in electronics, medical devices, instrumentation, aerospace, telecommunications, and precision engineering industries. We produce a variety of parts including Sewing Machinery parts, micro screws, pins, spacers, bushings, connectors, and custom miniature parts, all crafted with cutting-edge CNC and precision tools. When size matters and accuracy is critical, Ikon delivers uncompromised quality.

Hydraulic Cylinders

We manufacture durable and high-performance Hydraulic Cylinders designed to handle heavy-duty applications with precision and strength. Engineered using high-grade materials, our cylinders are trusted across industries such as construction, agriculture, automotive, machinery, material handling, and industrial automation. We offer a wide range including tie-rod cylinders, welded cylinders, telescopic cylinders, and custom-built hydraulic solutions to match diverse operational needs. Built for power, reliability, and long service life, Ikon's hydraulic cylinders keep your systems moving smoothly.

Idler Rollers and Conveyor Rollers

We offer a robust range of Idler and Conveyor Rollers engineered for smooth, efficient, and reliable material handling. Manufactured using high-quality materials and precision techniques, our rollers are ideal for industries like mining, cement, steel, logistics, packaging, and manufacturing. We produce various types including carry rollers, impact rollers, return rollers, guide rollers, and customized assemblies, all built to reduce friction, enhance belt life, and ensure continuous flow. Depend on Ikon for performance-driven conveyor solutions.

Die Sets

We manufacture high-precision Die Sets built for accuracy, strength, and durability in heavy-duty stamping and molding applications. Serving industries like automotive, sheet metal, plastics, electronics, Food Processing and tool & die manufacturing, our die sets are available in pillar, guided, ball-bearing, and custom configurations, tailored to match your tooling requirements. Rigid in design and crafted for repeatability, Ikon's die sets ensure consistent performance under pressure.

Rubber Moulded Products

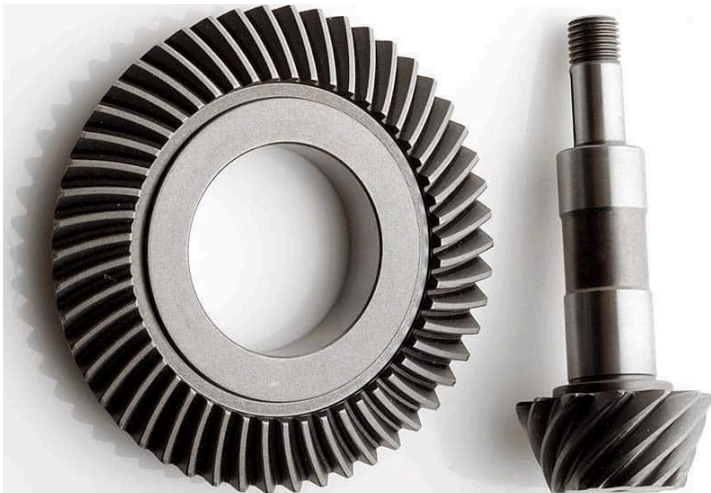

We offer a specialized range of Rubber Moulded Products developed to withstand heat, wear, vibration, and pressure. Widely used in automotive, machinery, electrical, pharmaceutical, and consumer goods sectors, our offerings include Rubber rollers, seals, gaskets, buffers, bellows, vibration pads, and custom-moulded rubber parts. Using premium elastomers and advanced molding technology, we ensure tight tolerances and excellent durability in every product.

Springs

We produce a wide variety of industrial springs designed for resilience, load-bearing strength, and reliable performance. Our springs cater to industries such as automotive, machinery, electrical, agriculture, etc. and include types like compression springs, tension springs, torsion springs, and custom wire forms. Manufactured with high-tensile materials and precise forming techniques, our springs are built to last—even in the most demanding environments.

Gear Sets

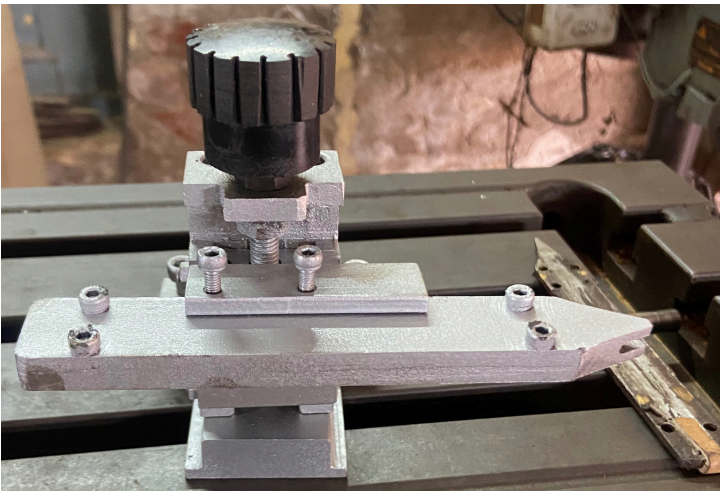

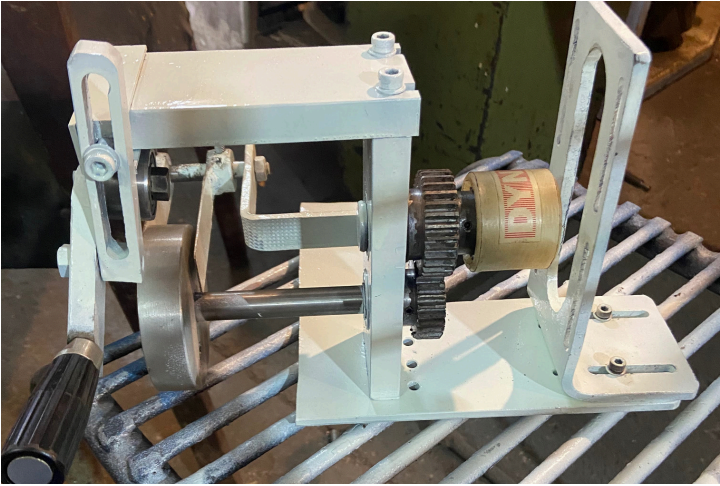

We manufacture a comprehensive range of precision gear sets engineered for durability, torque transmission, and smooth mechanical performance. Our gear solutions serve industries like automotive, machinery, aerospace, and industrial automation, offering types such as spur gears, helical gears, bevel gears, worm gears, and custom gear assemblies. Crafted from high-grade alloys and produced with exacting tolerances, our gear sets deliver reliable operation—even under the most rigorous conditions.

Industrial Fabricated Products

We specialize in durable and precision-built Industrial Fabricated Equipment tailored for heavy-duty use and structural efficiency. Serving industries such as manufacturing, logistics, warehousing, food processing, and construction, we design and produce a wide range of fabricated products including industrial stands, trolleys, racks, and custom-built structures. Crafted with high-grade metals and expert fabrication techniques, our solutions ensure strength, stability, and long-lasting performance in demanding environments.

Customised Metal Parts

We are your trusted partner for Customised Metal Parts tailored to your unique designs, specifications, and applications. Serving sectors like automotive, apparel, electronics, machinery, infrastructure, etc. We offer custom fabrication of Handles, brackets, fasteners, mounts, enclosures, spacers, and precision components. With expert craftsmanship, CNC machining, and full quality control, we bring your concepts to life with reliability and precision.
