

Kitchen

ABOUT US

In our production we can work with a vast amount of different materials and finishes. MDF, HDF, Melamine faced chipboard, pre-veneered boards, veneered items, varnished goods, lacquer, oil, stained – Just to name a few.

What makes our company unique, is our continued focus on being a trusted supplier that can cater to widely different customers, materials and needs. Our flexibility allows us to produce several hundred kitchens for big projects, while at the same time producing a one-off high-end custom kitchen for a carpenter or private client. We greatly benefit from our diversified client groups and project, as experiences from either end of the spectrum is beneficial in different areas of our business. From the large project we have learned a great deal about effective production methods which in turn helps us being able to optimize production of our one-off interior projects. On the other hand, our high-end one-off projects, has taught us to be extremely detail oriented, which results in our attention to detail being the same, whether we are doing one very high-end kitchen or five hundred kitchens in melamine.

We try our best to create as little friction for our clients as possible. We will gladly be of assistance if you need help with designing the interior and making the appropriate drawings needed for items to be produced.

In the catalogue:

Kitchen	p. 3-5
Materials	p. 6-7
Realizations and references	p. 8-10

The catalog is fully familiar with the solutions and materials we use in the production of Kitchens, wardrobes or bathroom.

This type of projects respond to specific customer expectations, so it is not possible to present ready projects with price offers here.

The various options presented on the following pages are intended to show the solutions most commonly found in the furniture we manufacture. On the next two pages you can find a list of materials divided by their purpose in finished furniture. We put links to the producer's website of individual materials.

The way we work with projects:

We start each project by learning about client's expectations regarding the room, style and materials. This is done either based on the customer's design or the information gathered from client. Then we have to agreed the details of the project.

Working with you, we detail the project to get the client's acceptance of the entire project and its solutions.

The project which is accepted by the customer is the basis for preparing the commercial offer. After accepting the offer, we prepare the contract and start production on its basis.

Kitchen 1 – natural oak

Modern cuisine in natural oak

Quality in every detail

The quality is visible in every element used in the kitchen. Cabinet bodies are often veneered with natural oak veneer. Painting is made on the both sides of the front. We use only solid material like Staron, stone, sintered quartz to make worktop. Plinths are made of the same material as the fronts. Solid oak drawers. There is no compromise with the quality.

Drawers are made of solid wood. The walls of the drawers are simple and thin, they do not take unnecessary space inside. You can also use Legraboxdrawers from BLUM. Internal divisions which organize the space are made strictly to the drawer size so there is no unused space. You can plan them freely, changing their dimensions and position to suit your habits.

Kitchen 2—varnished

P. 4

Varnished cuisine

In great-looking, quality kitchen varnish is also often used. We will not find gloss here because, like all surfaces in this style, the painting is also matte. Two sides of the front are always varnished. Minimalism is important for this style and because of this edges are only slightly rounded. The frame fronts and the shelves on steel brackets gives the kitchen traditional character. Also milled wreaths in hanging cabinets, illuminated vitrines or frame panels on the sides of the cabinets make is traditional.

When we look inside, we find oak drawers, veneered cabinet bodies, except for those places where the glass is in the front makes the center of the cabinet visible. The whole center, shelves, back wall are varnished. The whiteness of the cabinets is emphasized by a black, brushed stone top and black leather handles. The great care for aesthetics is as important as functionality and comfort.

Kitchen 3 – solid materials

Natural materials

The high quality kitchen is made of natural and precious materials: wood, veneer, stone, stainless steel. Oak wood should be in the highest class without flaws and knots. The surface of wood or veneer is oiled. The more matt the better in that kind of kitchen. The same with varnish and stone on the countertops, and brushed stainless steel. Mostly wooden floor made of boards or parquet are chosen.

Quality also means a natural oil surface. The oily, matt front with clear cathedral grain gives the entire kitchen a timeless elegance. This is how veneered cabinet fronts, bodies, drawers and elements of internal organization are finished.

Equipment for drawers, hinges and flaps:
