

MENSURATION

SYNOPSIS

AREA:

1. The area of a simple closed figure is the measure of the region enclosed by the boundary of the figure.
2. The area is measured in square units. A square meter is the area of a square whose side is one meter. A square centimeter is the area of a square whose side is one centimeter

Definition: A closed plane figure bounded by three line segments is called triangle.

- a. Area of triangle of base 'b' units and height 'h' units is

$$A = \frac{1}{2} \times \text{base} \times \text{height sq. units}$$

- b. Area of a triangle whose sides are 'a' units, 'b' units and 'c' units as per Heron's formula.

$$A = \sqrt{s(s-a)(s-b)(s-c)}$$

$$\text{Where } s = \frac{\text{semi perimeter}}{2} = \frac{a+b+c}{2}$$

- c. **Area of right angled triangle:** In a right angled triangle, the sides making right angle are 'a' and 'b' units, then the

$$\text{Area} = \frac{1}{2} \times a \times b = \frac{1}{2} ab \text{ sq. units} = \frac{1}{2} \text{ product of the sides}$$

$$\text{Area of Isosceles right angled triangle} = \frac{1}{2} a^2 \text{ sq. units}$$

Area of isosceles right angled triangle in terms of hypotenuse is

$$A = \frac{h^2}{4} \text{ sq. units}$$

$$\text{Area of an equilateral triangle} = \frac{\sqrt{3}}{4} a^2 \text{ sq. units}$$

Area of an equilateral triangle with height 'h' units is given as

$$A = \frac{h^2}{\sqrt{3}} \text{ sq. units}$$

Height of an equilateral triangle is $h = \frac{\sqrt{3}}{2} a$ units.

Perimeter of an equilateral triangle is $P = 3 \times \text{side units}$.

Perimeter and area of a rectangle:

$$\begin{aligned}\text{Perimeter} &= AB + BC + CD + DA \\ &= l + b + l + b = 2(l + b) \text{ units.}\end{aligned}$$

$$P = 2(l + b)$$

$$\text{Area} = l \times b \text{ sq. units} \quad l = \frac{\text{Area}}{\text{Breadth}}, \quad b = \frac{\text{Area}}{\text{length}}$$

Perimeter and area of a square:

A square whose each side is equal to 'a' units, then

$$\text{Perimeter} = 4 \times a \text{ units}$$

$$\text{Area} = \text{side} \times \text{side} = a^2 \text{ sq. units}$$

$$\text{Side of a square} = \sqrt{\text{Area}} \text{ units}$$

Relation between various units of area:

Length Units	Area Units
1cm = 10mm	$1\text{cm}^2 = (10 \times 10)\text{mm}^2 = 100\text{mm}^2$
1m = 100cm	$1\text{m}^2 = (100 \times 100)\text{cm}^2 = 10000\text{cm}^2$
1dam = 10m	$1\text{dam}^2 = (10 \times 10)\text{m}^2 = 100\text{m}^2 = 1 \text{ Are}$
1hm = 100m	$1\text{hm}^2 = (100 \times 100)\text{m}^2 = 10000\text{m}^2$ $= 1 \text{ hectare}$

Area of four walls of a room:

- Area of four walls of a room when the floor is in the shape of a rectangle.
 - If l , b and h are the length, breadth and height of a room and A be the total area of the four walls then

$$A = 2h(1 + b) \text{ sq.units}$$

b) If the perimeter of a floor is 'p', its height is 'h' and the total area is 'A', then

$$A = ph \text{ sq.units}$$

2. Area of four walls of a room when the floor is in the shape of a square if 'l' and 'h' are the length and height of a room and 'A' is the total area of four walls then

$$A = 4l h \text{ sq.units} \quad \text{or} \quad A = ph \text{ sq.units}$$

When 'p' is the perimeter of the room.

Quadrilaterals: A simple closed figure bounded by four line segments is called a quadrilateral.

$$\text{Area of quadrilateral} = \frac{1}{2} d (h_1 + h_2) \text{ sq.units}$$

Where $AC = d$, $BP = h_1$, $DQ = h_2$

$$\text{Area of quadrilateral ABCD} = (\text{Area of triangle ABC}) + (\text{Area of triangle ADC})$$

Parallelogram: A quadrilateral in which both pairs of opposite sides are parallel is called a "parallelogram".

- i. The opposite sides are equal
- ii. The opposite angles are equal
- iii. Diagonals bisect each other
- iv. Diagonals are not equal

$$\text{Area of Parallelogram} = \text{base} \times \text{height}$$

Results on areas: Parallelograms on the same base and between the same parallel line are equal in area.

i.

$\therefore$ Area of Parallelogram ABCD = Area of Parallelogram ABEF

Perimeter of a Parallelogram ABCD = AB + BC + CD + DA

ii.

If a triangle and a parallelogram are on the same base and between the same parallel lines then

Area of triangle = $\frac{1}{2}$ (Area of parallelogram)

$\therefore$ Area of $\triangle ABC = \frac{1}{2}$ (Area of Parallelogram ABDE)

Area of a rectangle = length $\times$ breadth sq.units

Perimeter of a rectangle = $2(l + b)$ units

Diagonal of a rectangle = $\sqrt{l^2 + b^2}$.

Area of a square = Side $\times$ Side = S^2 sq.units.

Perimeter of a square = $4 \times$ side units

Area of a square = $\frac{(\text{diagonal})^2}{2}$.

WORK SHEET

SINGLE ANSWER TYPE

1. If the side of a square is 'x' then its area is
 1) x 2) x^2 3) 4x 4) 2x
2. If the side of a square is 'x' then its perimeter is
 1) x 2) x^2 3) 4x 4) 2x
3. Perimeter of rectangle whose length 'l' is and breadth is 'b' is
 1) lb 2) $2(l + b)$ 3) 2l 4) 2
4. Area of rectangle whose length 'x' is and breadth is 'y'
 1) xy 2) $x + y$ 3) $x - y$ 4) $2(x + y)$
5. Area of triangle with base 'b' and height 'h' is
 1) $\frac{1}{2}bh$ 2) bh 3) $(b + h)$ 4) All
6. 50° , 80° are two angles of triangle, then triangle is
 1) equilateral 2) isosceles 3) scalene 4) can't say
7. 45° , 90° are two angles of a triangle, then triangle is
 1) acute triangle 2) obtuse triangle
 3) isosceles 4) scalene
8. 3cm, 4cm, 5cm are the side of _____ triangle
 1) equilateral 2) acute 3) obtuse 4) right
9. Each angle in a square is
 1) 30° 2) 60° 3) 90° 4) 120°
10. Sum of any two sides of a triangle is _____ the third side.
 1) equal to 2) less than 3) greater than 4) all
11. The diagonals of a square divide the square into 4 _____ triangles
 1) right angled 2) isosceles 3) right isosceles 4) all
12. If the side of a square is 60cm then its perimeter is _____
 1) 240cm 2) 240cm^2 3) 150cm 4) 3600cm
13. In a triangle angles ratio is 1 : 1 : 1 then sides ratio is
 1) 1 : 1 : $\sqrt{2}$ 2) $1:\sqrt{2}:1$ 3) $\sqrt{2}:1:1$ 4) None
14. Height of an angles ratio is 1 : 1 : 1 then sides ratio is
 1) $\sqrt{3}a$ 2) $\frac{\sqrt{3}a}{4}$ 3) $\frac{\sqrt{3}a}{2}$ 4) $\frac{\sqrt{3}a^2}{4}$
15. In a triangle angles are in the ratio 1 : 1 : 2 then corresponding sides ratio is
 1) $1:1:\sqrt{2}$ 2) $1:\sqrt{2}:1$ 3) 1 : 1 : 1 4) $1:\sqrt{3}:2$
16. In a triangle angles are in the ratio 1 : 2 : 3 then sides ratio is
 1) $1:\sqrt{3}:2$ 2) $1:3:\sqrt{2}$ 3) $1:\sqrt{3}:\sqrt{2}$ 4) $1:\sqrt{3}:\sqrt{2}$
17. Area of isosceles right angle triangle is 32cm^2 then length of its hypotenuse
 1) 8 2) $8\sqrt{2}$ 3) 4 4) $2\sqrt{8}$
18. Area of an equilateral triangle is $64\sqrt{3}$ then its perimeter is
 1) 4 2) 8 3) 48 4) 84

19. d_1, d_2 are length of diagonals of rhombus then its area is
 1) $d_1 d_2$ 2) $d_1 \left(\frac{d_2}{4} \right)$ 3) $\left(\frac{d_1}{2} \right) d_2$ 4) $\frac{1}{2} d_1 (h_1 + h_2)$
20. a, b are lengths of parallel sides and 'h' is the distance between parallel sides of a trapezium then its area is
 1) $\frac{1}{2} ah$ 2) $a \frac{h}{2} + \frac{1}{2} bh$ 3) $h(a + b)$ 4) abh
21. The diagonal of a quadrilateral is 'd' heights of the vertices opposite to the diagonal are h_1 and h_2 then its area is
 1) $dh_1 h_2$ 2) $\frac{1}{2} dh_1 h_2$ 3) $\frac{1}{2} dh_1 + h_2$ 4) $d \left(\frac{h_1}{2} + \frac{h_2}{2} \right)$
22. In which of the following diagonals need not to bisect each other
 1) Rhombus 2) square 3) parallelogram 4) trapezium
23. The ratio of angles in a quadrilateral is $1 : 2 : 3 : 4$ then its smallest angle is
 1) 36° 2) 63° 3) 72° 4) 144°
24. The angle in a quadrilateral are $x, x + 10, x + 20, 2x - 30$ then its greatest angle is
 1) 141° 2) 114° 3) 72° 4) 92°
25. Area of trapezium is $\frac{1}{2}(a^2 - b^2) \text{ cm}^2$ where a, b are parallel sides in it, then distance between a & b is _____
 1) $a + b$ 2) $b + a$ 3) $b - a$ 4) $a - b$
26. Base and height of a parallelogram are 12cm, and 7cm then its area is
 1) 84 cm^2 2) 84 cm 3) 96 cm^2 4) 42 cm^2
27. In a $\triangle ABC$, $BC = 8 \text{ cm}$, altitude from A to BC is 6cm then its area is
 1) 48 cm^2 2) 24 cm^2 3) 42 cm^2 4) None
28. In a quadrilateral ABCD, $AC = 10 \text{ cm}$, lengths of perpendiculars from B to D to AC are 5cm, 7cm, respectively then its area is
 1) 60 cm^2 2) 50 cm^2 3) 100 cm^2 4) 120 cm^2
29. In a quadrilateral, diagonals intersect at right angle and have length equal to 6cm and 7cm then its area is
 1) $\frac{21}{2} \text{ cm}^2$ 2) 21 cm^2 3) $\frac{42}{2} \text{ cm}^2$ 4) both 2 & 3
30. The area of parallelogram ABCD is 102 cm^2 , distance between AB and CD is 8.5cm then length of AB is
 1) 10cm 2) 11cm 3) 6cm 4) 12cm
31. If d is the length of the diagonal of square then its area is
 1) d^2 2) $\frac{d}{2}$ 3) $\frac{1}{2} d \cdot d$ 4) $\sqrt{d}$
32. In a parallelogram ABCD, $DP \perp AC$ and $AC = 10 \text{ cm}$, $DP = 4 \text{ cm}$, $AB = 8 \text{ cm}$ then distance between AB and CD is
 1) 10cm 2) 8cm 3) 6cm 4) None

33. ABCD is a parallelogram whose area is 60cm^2 and $DP \perp AC$, $AC = 12\text{cm}$ then the length of $DP =$ _____
 1) 10cm 2) 6cm 3) 5cm 4) 9cm
34. The parallel sides of a trapezium are $6\frac{1}{2}\text{cm}$ and $5\frac{1}{2}\text{cm}$ and distance between them is $2\frac{2}{3}\text{cm}$, then side of a square which has the same area as trapezium
 1) 16cm 2) 4cm 3) 8cm 4) 2cm
35. The area of rhombus is 25cm^2 one of the diagonal is 10cm long then the length of other diagonal is
 1) 20cm 2) 15cm 3) 10cm 4) 5cm
36. The diagonal of a square is 18cm, and then side of the square is
 1) 9cm 2) $2\sqrt{9}\text{cm}$ 3) $9\sqrt{2}\text{cm}$ 4) $\sqrt{2}\text{cm}$

MULTI ANSWER TYPE

37. If one of whose diagonals of a parallelogram is 88cm and offset of one of the vertices to this diagonal is 40cm, then its area is
 1) 3520 cm^2 2) 0.352 m^2 3) $35.20 \times 10^2\text{ cm}^2$ 4) $3.520 \times 10^3\text{ cm}^2$
38. The base of a triangular field is three times its height. If the cost of cultivating the field is Rs. 36.72 per hectare is Rs. 495.72. Then
 1) the base of the triangular field is 900m
 2) the base of the triangular field is 1200m
 3) the height of the triangular field is 300m
 4) the height of the triangular field is 400m
39. If the altitude of an equilateral triangle is $2\sqrt{3}$, then its
 1) area is $4\sqrt{3}\text{ cm}^2$ 2) side is 4cm 3) area is $\frac{8}{\sqrt{3}}\text{ cm}^2$ 4) side is 6cm

REASONING ANSWER TYPE

40. *Statement-I:* Sides of a right angled triangle are 9cm, 12cm, 15cm, then its area is 108 sq.cm.
Statement-II: Area of a right triangle is $\frac{1}{2} \times b \times h$.
 1) Both Statements are true, Statement II is the correct explanation of Statement I.
 2) Both Statements are true, Statement II is not correct explanation of Statement I.
 3) Statement I is true, Statement II is false.
 4) Statement I is false, Statement II is true.
41. *Statement-I:* Area of rhombus is 480cm^2 .
Statement-II: If the diagonals of a rhombus are 48 cm and 20 cm are stated in statement 1.
 1) Both Statements are true, Statement II is the correct explanation of Statement I.

- 2) Both Statements are true, Statement II is not correct explanation of Statement I.
 3) Statement I is true, Statement II is false.
 4) Statement I is false, Statement II is true.

COMPREHENSION TYPE

Writeup:1

In the figure ABCD is a parallelogram and DP is perpendicular to AC

42. If the area of a parallelogram is 70sq.cm and $AC = 14\text{cm}$, then the length of DP is
 1) 5 cm 2) 840 cm 3) 980 cm 4) 3 cm
43. If $AC = 16\text{cm}$, $DP = 5\text{ cm}$, $AB = 10\text{cm}$, then the distance between AB and CD is
 1) 80 cm^2 2) 50 cm^2 3) 8 cm 4) 16 cm
44. If $AD = 6\text{cm}$, $AC = 9\text{cm}$, $DP = 4\text{cm}$, then the distance between AD and BC is
 1) 6 cm 2) 54 cm 3) 24 cm 4) 3 cm

Writeup:2

In the given figure ABCD is a square, $AC = BD = 4\sqrt{2}\text{cm}$, $AE = DE = 2.5\text{ cm}$.

- Read the above passage and answers the questions below.
45. $EF =$
 1) 1.5 cm 2) 2.5 cm 3) 3 cm 4) 4cm
46. Area of ABCD =
 1) 16cm^2 2) 14cm^2 3) 17cm^2 4) 12cm^2
47. Area of ABCDE =
 1) 22cm^2 2) 19cm^2 3) 17cm^2 4) 20 cm^2

MATRIX MATCHING TYPE

48. Column - I

Column - II

a) In an equilateral triangle angles are in the ratio
1 : 1 : 1, then side are in the ratio

1) $1:1:\sqrt{2}$

b) The area of isosceles right triangle of side 'a' units

2) $\frac{1}{2}a^2$ sq.units

c) Area of an equilateral triangle whose height
is 'h' units

3) $1:\sqrt{3}:2$

in a triangle are in the ratio 1 : 1 : 2,

d) If the angles

4) $\frac{h^2}{\sqrt{3}}$ sq.units

5) 1 : 1 : 1

INTEGER ANSWER TYPE

49. If the base of an isosceles triangle is 8cm and each of its equal sides is 5cm, then its area is _____ sq.cm.

KEY & HINTS

WORK SHEET (KEY)				
1) 2	2) 3	3) 2	4) 1	5) 1
6) 2	7) 3	8) 4	9) 3	10) 3
11) 4	12) 1	13) 4	14) 3	15) 1
16) 1	17) 2	18) 3	19) 3	20) 2
21) 4	22) 4	23) 1	24) 2	25) 4
26) 1	27) 2	28) 1	29) 4	30) 4
31) 3	32) 4	33) 3	34) 1	35) 4
36) 3	37) 1,2,3,4	38) 1,3	39) 1,2	40) 4
41) 1	42) 1	43) 3	44) 1	45) 1
46) 1	47) 2	48) 5,2,4,1	49) 12	

37. $bh = 88 \times 40 = 3520 \text{ sq.cm}$

38. Area of field = $\frac{495.72}{36.72} = 13.5 \text{ hectare} = 135000 \text{ m}^2$

Now, if $h = x$, $b = 3x$

$$\therefore \frac{1}{2} \times b \times h = 135000$$

39. Height of an equilateral triangle = $\frac{\sqrt{3}}{2} \times \text{side}$

$$\therefore 2\sqrt{3} = \frac{\sqrt{3}}{2} \times \text{side} \Rightarrow \text{side} = 4\text{cm}$$

$$\therefore \text{Area of an equilateral triangle} = \frac{\sqrt{3}}{4} \times (\text{side})^2 = \frac{\sqrt{3}}{4} \times 4 \times 4 = 4\sqrt{3} \text{ cm}^2$$

40. Conceptual

41. $bh = 70$; Area of triangle = $\frac{1}{2} \times AC \times DP = \frac{1}{2} \times 14 \times DP = 35 \Rightarrow DP = 5\text{cm}$

42. Area of parallelogram = $2\left(\frac{1}{2} \times 16 \times 5\right) = 2(8 \times 5)$

$$A = 2 \times 40 = 80\text{cm}^2$$

The distance between AB and CD is h

$$AB \times \text{distance between AB and CD} = 80\text{cm}^2$$

$$10 \times h = 80 \Rightarrow h = 8 \text{ cm}$$

43. $9 \times 4 = 6 \times x$; $x = 6\text{cm}$

44. Conceptual

45 – 47 Paragraph

$$AB = BC = CD = AD = 4 \text{ cm} \left(Q \text{ Side} = \frac{\text{Digonal}}{\sqrt{2}} \right)$$

$$\text{and } EF = 1.5 \text{ cm} \quad (\text{By Pythagorus theorem})$$

$$\therefore \text{Area of ABCDE} = \text{Area of ABCD} + \text{Area of AED} = (4)^2 + \frac{1}{2} \times 4 \times 1.5 = 19\text{cm}^2$$

48. Conceptual

49. $s = \frac{a+b+c}{2} = \frac{8+5+5}{2} = \frac{18}{2} = 9$

$$A = \sqrt{9(9-8)(9-5)(9-5)} = \sqrt{9 \times 4 \times 4} = 3 \times 4 = 12 \text{ cm}^2$$
