Abdominal Ultrasound Preparation Instructions

In preparation for your pet's upcoming abdominal ultrasound appointment, please follow these steps to ensure we have the best shot at clear images.

1. No food after 10pm the night before the procedure. Water is OK.
2. Give prescribed medications as directed. If you need to give it in a pill pocket, please only give it with the smallest amount of food item possible. *If your pet is diabetic, please follow instructions of your primary veterinarian and disregard these.*
3. If your pet is prescribed pre-medications for their procedure, please make sure to give those on time as directed to help minimize other medications we may need to give in the clinic to help them relax.

Echocardiogram Preparation Instructions

1. You do not need to withhold food or water from your pet.
2. Please give all medications as prescribed.
