Safety Precautions

To prevent damage to your personal and property safety and ensure safe and correct use of the product, please read the Operations Manual carefully and follow the steps in the Operations Manual.

Safety Precautions

- ★ Before operating the machine, users must read the Operations Manual carefully and strictly follow the operating instructions.
- ★ Laser machining may be risky, and users should carefully consider whether the object to be machined is suitable for laser operation.
- ★ The objects to be machined and emissions shall comply with local laws and regulations.
- * Four types of lasers are used by the machine (intense laser radiation), which may cause the following consequences:
 - ① Setting fire to combustible materials around it;
 - ② The different objects to be machined may generate other radiating and toxic and hazardous gases during laser machining;
 - ③ Direct laser radiation may cause personal injury. Firefighting equipment must be equipped at the site. Do not pile inflammable and explosive objects around the workbench and equipment, and ensure good ventilation.
- * The equipment should be placed in an environment which is dry and free from pollution, vibration, strong electricity and strong magnetism.

Working environment temperature: -10-45°C; working environment humidity: 5-95% (no condensate).

- ★ Working voltage of equipment: AC100-240V.

The engraving machine and other related equipment must be safely grounded before the start of operation

- ★ When the equipment is on, it should be attended at all times. All the power must be cut off before personnel leave to prevent unusual conditions.
If any, please cut off the power immediately.

Do not place any irrelevant total reflection or diffuse reflection object on the equipment to prevent the laser from reflecting onto human body or flammable objects.

- * The equipment should be kept away from electrical equipment sensitive to electromagnetic interference, in case of possible electromagnetic interference.
- * Non-specialized personnel are prohibited from disassembling the laser equipment for high voltage hazard or other potential hazards.

Assembly steps

1. Place the lifting column here

2. Fix the lifting column with four screws

3. Place the laser on the column bracket

4. Four screws to fix the laser

5. Insert the connecting line behind the laser

It can be obtained by visiting the official website "<http://www.mr-carve.com/download/>" and the installation procedure is the same as method 1.

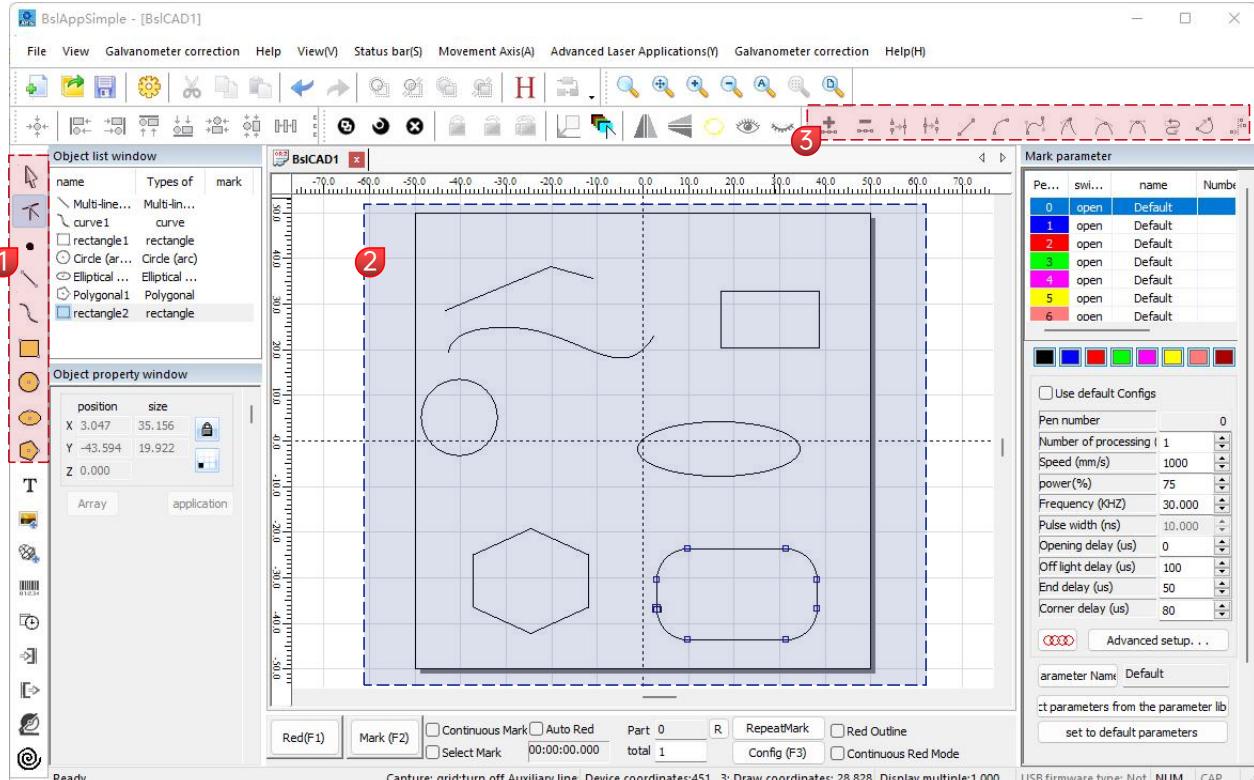

Software interface introduction

Hovering over a function icon will display the corresponding usage instructions for that icon

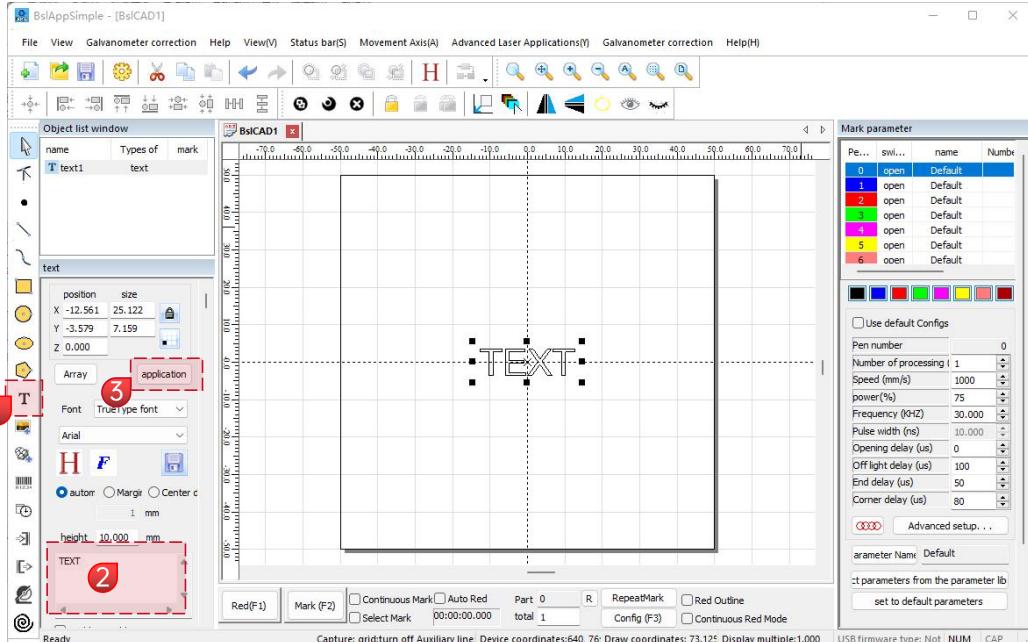

Shape Drawing

- ① Drawing bar: draw line, curve, rectangle, circle, polygon
- ② Content display box
- ③ Node editing bar: node editing for the drawn figure

Text Drawing

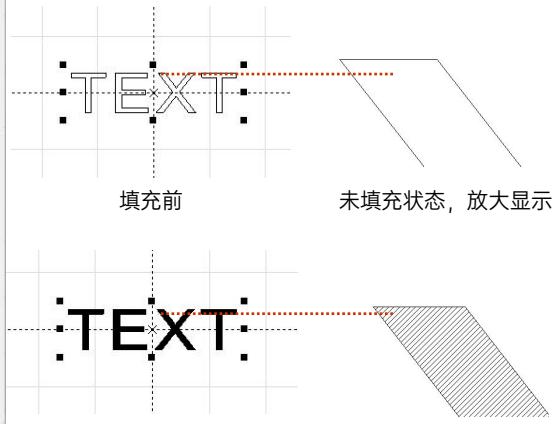

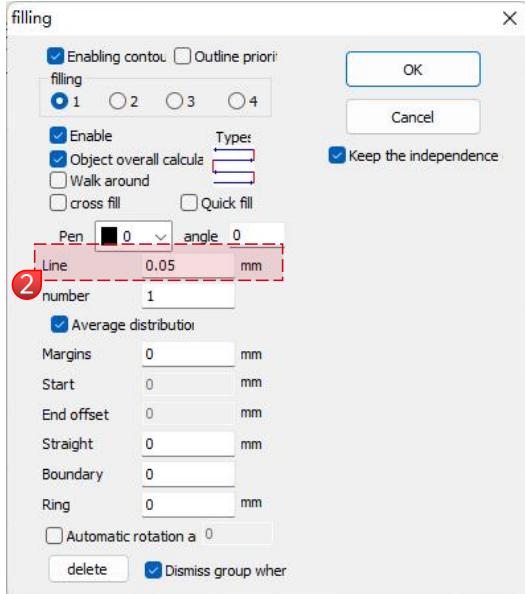

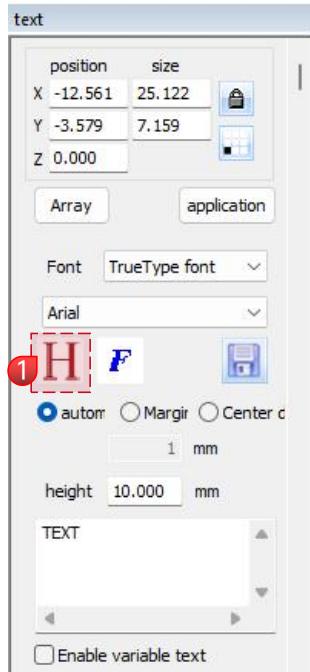

1. Click **T** and the "TEXT" appears by default. Enter the words in the text field and click **application** to complete text entry.

H Text filling must be filled to work on the object to be carved.

F A text tool to set alignment, character spacing, arc text, angle and other parameters.

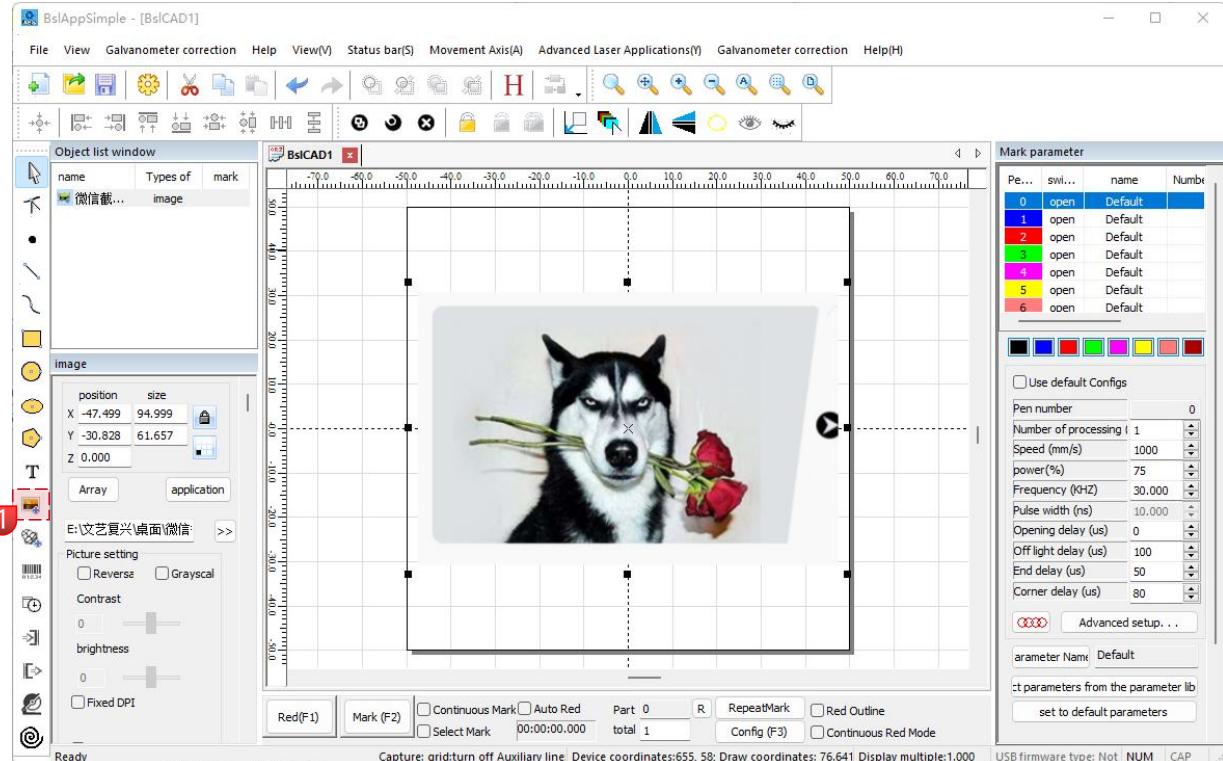

Text Filling

- 1.Click **H** to open the Filling Settings window.
- 2.There is no need to set other parameters for text carving. Only "line" needs to be changed. The default value is 0.05.

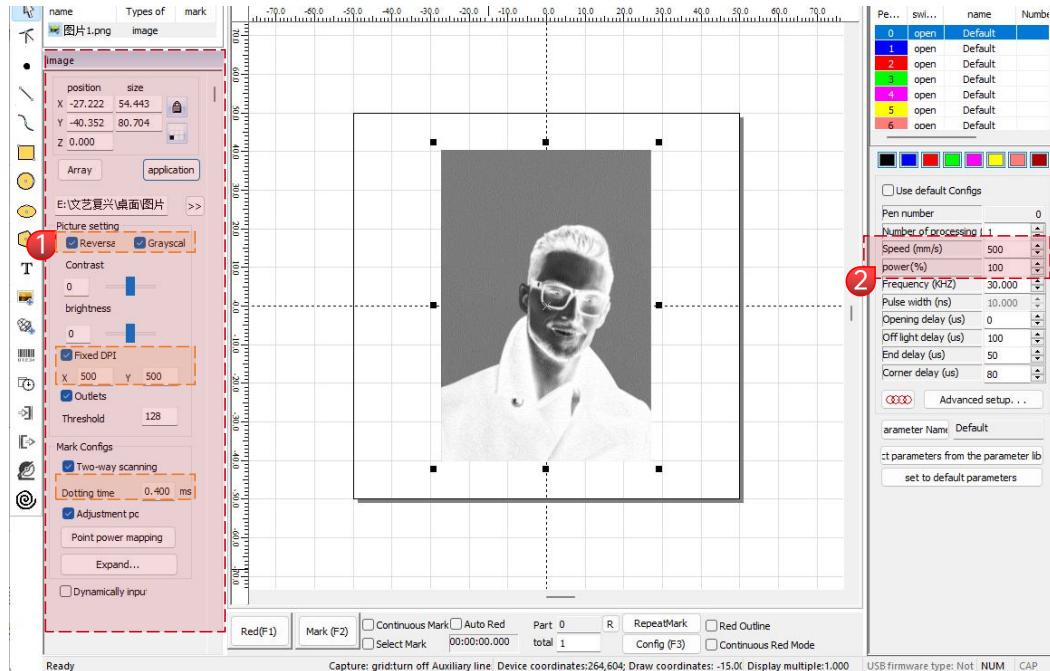

Notes: "Line" is the text filling density. The greater the value, the higher the carving speed, the lighter the carving color; the smaller the value, the lower the carving speed, the deeper the carving color;
Carving on primary color metal, paint and baking paint, oxidized paint surface,
electroplating metal, plastic, leather and other paint materials provide the best effects.

Picture Import

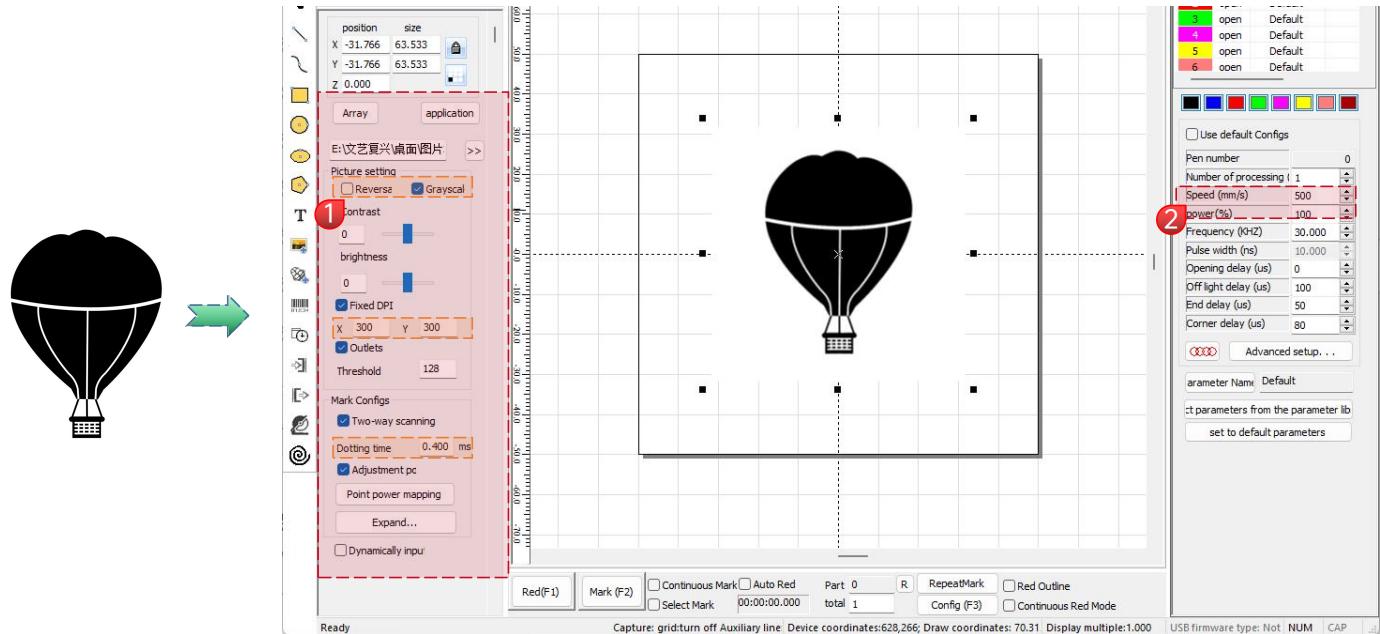

1. Click to bring up the "Image Properties" Window, select the image you need, and click **application** to import the image.

Picture Processing (People Photos / Color Photos)

1. Adjust the picture to a proper size;
 2. Check "Reversal", "Grayscale" and "Fixed DPI" (enter parameter 500 for X and Y) and "Outlets" in the Picture Settings window;
 3. Check "Two-way scanning" in the "Mark Configs" window and enter 0.4 in "Dotting time"; Click application to enter parameters
 4. Carving parameter setting. Set "speed(mm/s)" as 500 and "power(%)" as 100.
- *Notes: Carving of portrait/colored photo on paint and baking paint metal/oxidized paint electroplating metal can produce the best effects. The higher the DPI value, the clearer the engraving effect; the larger the dotting time, the deeper the engraving effect.

Image processing (general bitmap)

Adjust the picture to a proper size;

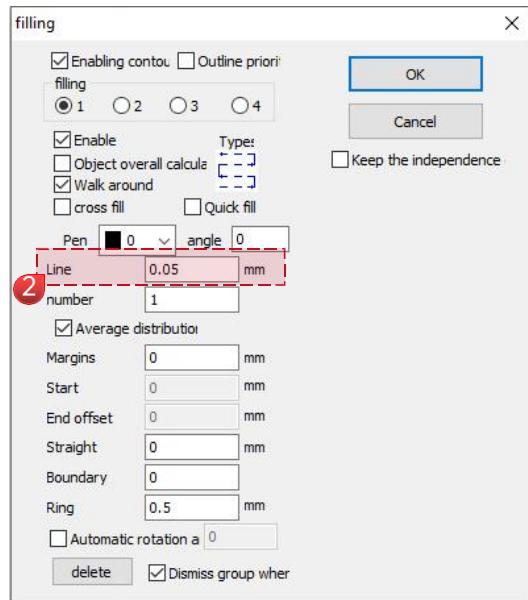

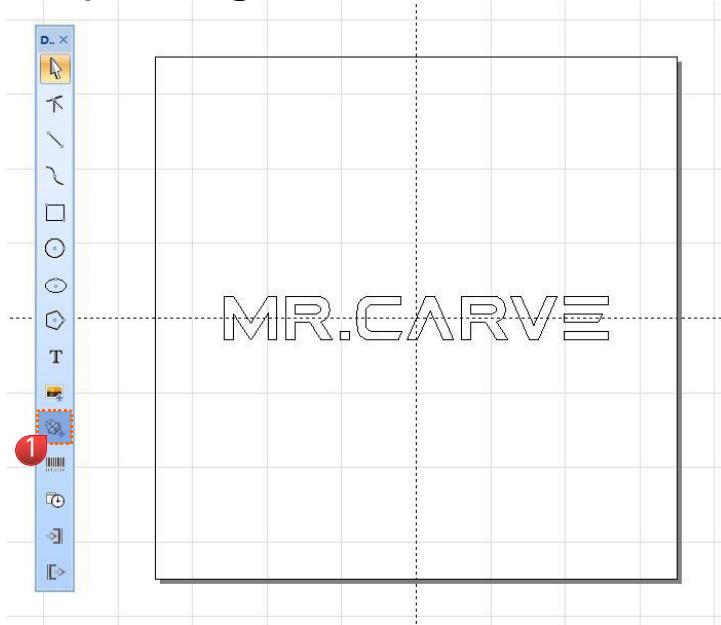

Check "Grayscale" and "Fixed DPI" (enter parameter 300 for X and Y) and "Outlets" in the Picture Settings window;

Check "Two-way scanning" in the "Mark Configs" window and enter 0.4 in "Dotting time"; Click application to enter parameters

Carving parameter setting. Set "speed(mm/s)" as 500 and "power(%)" as 100.

*Notes: Carving on primary color metal, paint and baking paint, oxidized paint surface, electroplating metal, plastic, leather and other paint materials provide the best effects.

Importing vector files

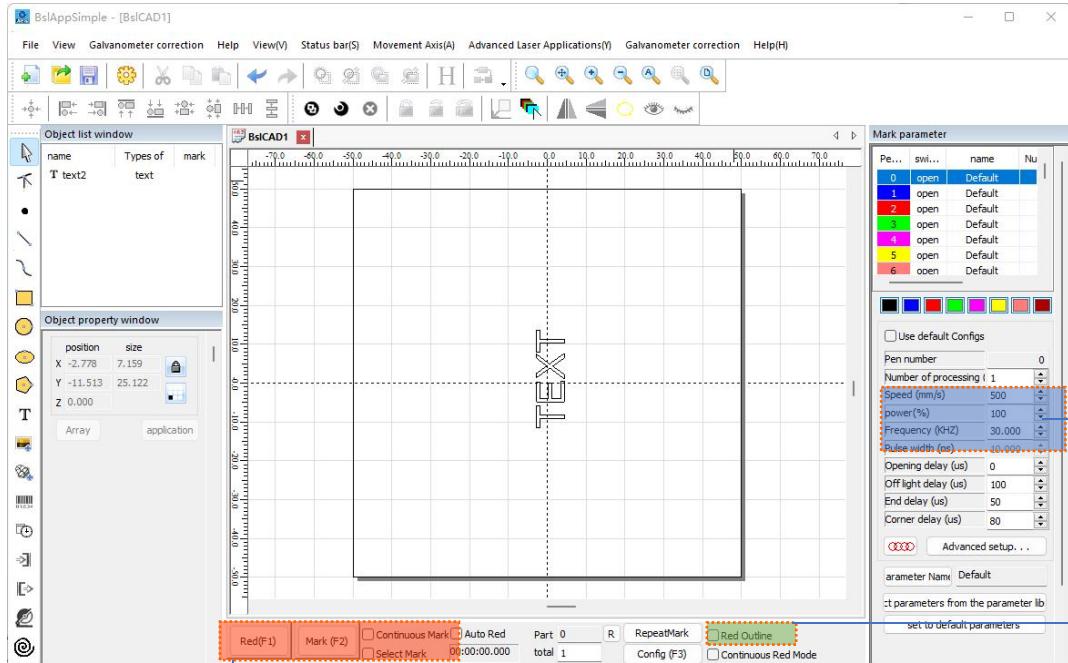

1. Click  to import vector files; support PLT, DWG, AI and other formats;
2. The imported vector file needs to be filled in order to complete the marking.

3. For vector file filling, no other parameters need to be set. You only need to modify the "line spacing", and the default parameter is 0.05;

Note: Line spacing is the filling density. The larger the value, the faster the marking speed and the lighter the engraving color; on the contrary, the smaller the value, the slower the marking speed and the darker the engraving color; it is best to mark on original color metal, spray paint, oxidized paint, electroplated metal, plastic, leather and other painted materials.

Material	Line	power	speed
Metal	0.05/ 0.01/ 0.005	100	500~1000
Painted Metal	0.05 / 0.01	100	1000
plastic	0.05	100~70	1000 ~ 1500
leather	0.05	100~70	1000 ~ 1500
Stone	0.005/0.001	100	200
Painted glass	0.05	100~80	1000
Paint material	0.05	100~80	1000

- Parameter explanation:
1. The larger the fill line spacing value, the sparser the fill density, which affects the engraving speed. If it is faster, the engraving color will become lighter.
 2. The smaller the fill line spacing value, the denser the fill density, which slows down the engraving speed. If it slows down, the engraving color will become darker.
 3. Power is used to control the intensity of the laser output. A parameter of 0 means 100% laser output; a parameter of 50 means 50% laser output
 4. Speed refers to the marking speed. The larger the parameter, the faster the engraving speed, and the smaller the parameter, the slower the speed.

Engraving text/vector

Parameter explanation:

1. Fill line spacing: The larger the value, the sparser the filling density, which will increase the engraving speed and make the engraving color lighter.
2. Fill line spacing: The smaller the value, the denser the filling density, which will slow down the engraving speed and make the color darker.
3. Power is used to control the intensity of the laser output. A parameter of 0 means 100% laser output. A parameter of 50 means 50% laser output.
4. Speed refers to the marking speed. The larger the parameter, the faster the engraving speed, and the smaller the parameter, the slower the speed.

Engraving bitmap/character image

Parameter explanation:

1. Fixed DPI; X Y value parameter refers to adjusting the picture pixel. The larger the parameter, the higher the pixel, and the slower the engraving speed. Because the pixel is dense, it will engrave every point, which will cause the engraving speed to slow down. Generally, when engraving color photos or portrait photos, it is recommended to adjust the fixed DPI parameter value to X: 500; Y: 500 or X: 800; Y: 800.
2. Engraving white background bitmap, the picture composed of lines is called bitmap. Generally speaking, the pixel does not need to be too high. The recommended reference value is X:200;Y:200 or X:300;Y:300
3. Dotting time controls the engraving speed. The smaller the parameter, the faster the engraving speed, and the larger the parameter, the slower the engraving speed.

FAQ

I. The machine does not respond when powered on.

1. Power connection failure: check the socket, switch and socket on the machine body to ensure that they have been properly plugged and connected to power; check the Power button on the panel to make sure it is pressed and the button light is on.

II. Unable to connect to the computer

1. Not connected to the USB cable: check the computer and machine interface of the USB cable to ensure that it is properly connected.

The USB interface on the front panel of some desktop computers is invalid, so it needs to be connected to the socket at the rear of the host.

2. The driver is not installed properly: install the driver according to the instructions. If the computer identifies the device as a serial port after installation, the hardware connection is OK.

3. Other special cases: disconnect the USB cable and power supply. After the equipment is completely powered off for 5 seconds, connect it to the power again.

III. Light carving or no carving

1. Inaccurate focusing: read the focusing section of the Operations Manual for accurate focusing.

2. Carving speed: a result of too high speed or too short burning time. Read the carving parameters section of the Operations Manual to readjust the parameters.

3. Shallow picture: the imported picture needs to be clear. If the lines are too fine and the color is too light, the carving effect will be affected directly.

4. Placement of object: as the laser focal distance is fixed, the object to be carved needs to be flat, parallel to the machine body. If the object to be carved is tilted, the focal distance is inaccurate, resulting in abnormal carving effect.

雕刻文字/矢量图

参数讲解：

- 1、填充线间距:数值越大,填充的密度也就越稀疏, 影响雕刻速度变快, 雕刻颜色就会变浅
- 2、填充线间距:数值越小,填充的密度也就越密集, 影响雕刻速度变慢, 颜色就会变深

- 4、速度是打标速度, 参数越大雕刻速度越快, 越小速度越慢

雕刻位图/人物图

参数讲解：

- 1、固定DPI; X Y 值参数 , 指的是调节图片像素点, 参数越大, 像素越高, 雕刻速度也会变慢, 因为像素点比较密集, 它会每个点每个点都要雕刻, 就会导致雕刻速度变慢。一般雕刻彩色照片或者人物照片,推荐固定DPI 参数值调节X: 500; Y: 500 或者X: 800; Y: 800
- 2、雕刻白底位图, 由线条组成的图片就叫位图,一般来说像素不需要太高, 建议参考值为X:200;Y:200或X:300;Y:300
- 3、打点时间是控制雕刻速度的, 参数越小雕刻速度越快, 越大雕刻速度越慢。

常见问题

I、机器通电无反应

1. 未通电：检查插座、开关、机身电源插座等，确保已插接到位且正常通电；检查面板上面的“紧急制动开关”是否开启，

II、无法连接电脑

1. USB线未连接：检查USB数据线电脑端和机器接口，确保插接到位，部分台式电脑前面板USB接口无效，需连接机身后方的插口。
2. 驱动未正常安装：按照操作指引完成驱动安装，安装完成后电脑将设备识别成串口则说明硬件连接OK。
3. 其他特殊情况：拔出USB数据线和电源，设备完全断电5S后，重新进行连接操作。

III、雕刻效果很浅或没有痕迹

1. 对焦不准：阅读使用手册对焦部分进行准确对焦。
2. 雕刻速度：过快，灼烧时间过短所致，阅读使用手册雕刻参数部分重新调整参数。
3. 图片过浅：导入的图片要清晰，线条过细，颜色过浅会直接影响雕刻效果。
4. 雕刻物摆放：被雕物体倾斜放置，激光的焦距是固定的，所以被雕物体要放平，与机身平行，反之则焦距不准，导致雕刻效果异常。
