InterGenic Project

## Piloting our methodology with seniors and youth across the EU

During the last few months, we have been finalizing the implementation of the second workshop with the seniors and youth while starting the piloting sessions aimed at promoting the exchange of knowledge between generations. These sessions focus on developing digital and green skills through mentorship and hands-on activities, such as navigating on social platforms, sharing recipes and learning how to craft.

- **Spain:** Older adults explored mobile apps for daily life activities and learned about ChatGPT, while young people created traditional “giants” from recycled material.
- **Austria:** Youth helped seniors with smartphone skills, preparing for AI and photography workshops to enhance intergenerational learning.
- **Cyprus:** Youth mentored seniors in digital skills while seniors shared sustainable traditions, fostering mutual empowerment.
- **Romania:** Seniors explored the digital tools as youth got insights into traditional recipes and crafts.

## Consortium

The consortium of the InterGenic project is comprised by 8 different institutions from 7 EU countries: Spain, Belgium, Greece, Cyprus, Austria, Ireland and Romania

## Time for intergenerational actions!

After initiating the pilot testing phase in January, we are now concluding this phase in February and March, preparing to transition to the next stage, which will focus on **Youth and Seniors Intergenerational Action**.

The InterGenic project introduces the **Facilitators' Handbook** for Collaborative Action, a comprehensive guide designed to support intergenerational learning. It provides practical tools and strategies to help facilitators bridge digital innovation and traditional sustainable practices, fostering meaningful collaboration between youth and seniors.

InterGenic EU Project

[www.intergenic.eu](http://www.intergenic.eu)

In each country, we will deliver 12 structured sessions to establish intergenerational collaboration. At this stage, seniors and young people will work together to develop ideas for tools or initiatives for green and digital transformation, transferable to all the participating countries, and beyond. Focusing on key themes such as **digital literacy**, **green sustainable practices**, **storytelling**, and **problem-solving**, these sessions will provide step-by-step guidance, reflection prompts, and adaptable exercises. This approach encourages mutual learning, empowering participants to exchange knowledge, develop essential skills, and co-create impactful solutions for their communities.
