WORKS

LIGHT

Light application footwear is engineered for dry environments. Wearers of this type of footwear typically work indoors, on relatively even floors. Examples of light application industries are logistics, assembly or even catering.

MEDIUM

Medium application footwear is engineered for both wet and dry environments with more robust requirements. People wearing this type of footwear usually have to carry out tougher jobs or kneeling activities. These shoes and boots can be used both indoors and outdoors and are therefore more all-round, but less fit for extreme circumstances. Examples of medium application industries are light construction, oils and gas industry or utility.

HEAVY

Heavy application footwear is engineered for dirty, muddy and rocky environments. People wearing this type of footwear mostly work outdoors and have to walk on uneven surfaces that demand high stability and protection of their feet. Examples of heavy application industries are road construction, building construction, or even mining.

THE NEW STANDARD FOR SAFETY FOOTWEAR EXPLAINED - EN ISO 20345:2022

Standards for PPE products are regularly reviewed and adapted when necessary. This is also the case for EN ISO 20345. Until June 2022, the 2011 version of the standard was in place. From then on, the updated 2022 standard came into effect. Certificates do not expire when a standard is updated. This means the certificates of all shoes certified to EN ISO 20345:2011 remain valid until their expiration date (which is 5 years from the date of issue).
