Conference Overview

Digital transformation is reshaping economies, labour markets and public institutions worldwide. On one hand, digital technologies create new opportunities for economic growth, innovation and improved public services, on the other hand, they also generate new forms of inequality between countries, regions, organisations and individuals.

Therefore, understanding of the drivers of digital divides and identifying effective strategies to promote inclusive digital development has become a key challenge for researchers, policymakers and practitioners.

This international conference aims to bring together scholars and practitioners to discuss new research and policy insights on digital transformation, digital inclusion, skills development and the broader socio-economic impacts of digitalisation and innovation.

The conference will provide a multidisciplinary platform for presenting empirical research, theoretical contributions and policy-oriented studies to addressing the challenges of current development.

Selected contributions will be published in **peer-reviewed conference proceedings with ISBN**.

**Co-funded by
the European Union**
