PINAKASHIELD TECH

Role	UI/UX & Brand Designer	Team	Global Operation
Contract Type	Freelance (12-Month Contract)	**Engagement/ Location**	Part-Time / Fully-Remote

JOB SUMMARY

PinakashieldTech is seeking a multi-talented **UI/UX & Brand Designer** who can bridge the gap between compelling public storytelling and complex data visualization. You will wear two highly impactful hats: First, you will finalize our corporate brand identity and completely redesign our public website. Second, you will design the user interfaces for our core product-translating highly complex, dense network data into clean, intuitive visual insights for our Security Operations Center (SoC) and SIEM dashboards.

JOB RESPONSIBILITIES

Key area	Tasks
Brand Identity Finalization	Define and solidify the PinakashieldTech brand guidelines (color palettes, typography, iconography, and visual tone). You will ensure our brand communicates the trust, cutting-edge innovation, and security inherent in our AI and Post-Quantum tech.
Corporate Website Redesign	Lead the end-to-end redesign of our public-facing website. You will create a seamless user journey that clearly and powerfully explains our complex cybersecurity value propositions to enterprises and investors.
Dashboard Design (UI/UX)	Design intuitive, high-performance, dark-mode-optimized dashboards tailored for our SoC/SIEM systems and critical infrastructure monitoring tools.
Data Visualization	Conceptualize the best ways to visually represent complex network topologies, threat vectors, and compliance metrics, translating raw backend data into actionable operational insights.
Unified Design System	Build and maintain a cohesive design system that scales seamlessly from our marketing website all the way into our deep-tech product interfaces.

QUALIFICATIONS

Educational and Experience

- Bachelor or Master in Computer Science, HCI or a related field.
- Proven portfolio showcasing both corporate website designs and complex, data-heavy web applications (Dashboards, admin panels, SaaS products).
- Strong experience in creating and documenting brand identities and design systems from the ground up.
- While you don't need to code the backend, you must understand how to design for modern JavaScript frameworks (React, Vue) and data visualization libraries (D3.js, Chart.js).
- Mastery of Figma (including components, auto-layout, and prototyping), Adobe Creative Suite, or similar industry-standard tools.

Skills & Competencies:

- Excellent verbal and written English communication skills, with the ability to present complex technical data clearly over virtual conferencing platforms to international stakeholders.
- Experience with WordPress and other related tools.
- Ability to work in a team environment and collaborate with other associates.

You are not just making things look modern; you are architecting the entire visual soul of **PinakashieldTech**. From the website that wins us EU consortium bids to the exact lens through which operators will identify cyber threats, your design will be the face of the company.

Job Number and Application Details

Job Number: pst#20260103

If you are interested in applying for this position, please prepare your **resume, certificates**, **portfolio-link**, and a **motivational letter**. Send your application materials to the contact details provided below:
