

POINT PIKKER

IT & SOFTware

POINT PIKKER provides comprehensive IT software solutions designed to meet the diverse needs of businesses, from nascent startups to established multinational corporations. Our services are tailored to help companies optimize their operations, enhance productivity, and achieve digital transformation. We offer a full spectrum of IT solutions that are scalable, efficient, and cost-effective.

For Small and Medium-sized Enterprises (MSMEs) & Startups

We empower MSMEs and startups to build a strong technological foundation without a large upfront investment. Our solutions are designed for ease of use, affordability, and rapid deployment, allowing these businesses to focus on growth.

- **Cloud-Based ERP & CRM:** We provide cloud-based Enterprise Resource Planning (ERP) and Customer Relationship Management (CRM) software that streamlines critical business functions like accounting, inventory management, sales, and customer service. This helps MSMEs to manage their operations efficiently from a single platform.
 - **Website & Mobile App Development:** We offer end-to-end services for building professional websites and user-friendly mobile applications. This helps startups establish their digital presence, reach a wider audience, and engage with customers effectively.
 - **IT Infrastructure Setup & Support:** We assist with setting up and managing a company's IT infrastructure, including network configuration, cybersecurity, and data backup solutions. Our support ensures that their systems run smoothly and securely.
-

For Individual Companies & Corporate

POINT PIKKER offers advanced software solutions and consulting services to help established businesses optimize their processes, improve decision-making, and gain a competitive edge.

- **Custom Software Development:** We develop bespoke software applications that are uniquely tailored to a company's specific needs. This includes applications for automation, data analytics, and workflow management, which can significantly improve efficiency and productivity.

- **Data Analytics & Business Intelligence:** We help businesses harness the power of their data. Our solutions provide real-time dashboards and reports, enabling corporate leaders to make data-driven decisions and identify new opportunities for growth.
- **Legacy System Modernization:** We assist companies in migrating from outdated legacy systems to modern, cloud-native platforms. This process improves performance, enhances security, and ensures the business stays relevant in the digital age.

For Multinational Corporations (MNCs)

Our solutions for MNCs are built to handle large-scale operations, complex international business processes, and stringent security requirements. We provide robust, scalable, and globally integrated software.

- **Enterprise-wide Software Integration:** We specialize in integrating various software systems across different departments and global locations. This creates a unified and seamless flow of information, improving collaboration and operational visibility.
- **Cloud Migration & Management:** We provide expert services for migrating entire IT landscapes to the cloud, including multi-cloud and hybrid cloud environments. Our ongoing management services ensure optimal performance, security, and cost control.
- **Advanced Cybersecurity Solutions:** We offer enterprise-grade cybersecurity services, including threat detection, risk management, and compliance with international standards. This protects the company's valuable assets and intellectual property from evolving cyber threats.
