

WHAT AM I LOOKING FOR IN A RESEARCH PAPER?

JOURNAL NAME AND DETAILS The name of the journal, issue number, and page number are essential for identifying, accessing, citing, and referencing the scientific research paper, and providing information on the source and scope of the article.

RESEARCH TYPE It serves to distinguish the type of article from such as original articles, review articles, or case studies and helps readers identify the purpose and scope of the paper.

TITLE The Title should be concise, specific, with appropriate terminology, informative, creative & must accurately reflect the content of the Research & engage readers.

AUTHOR NAME AND DESIGNATION The names of the authors in a scientific research paper provide credit and recognition for their contributions to the study. The order and number of authors can also indicate the relative importance and level of contribution of each author to the research.

CORRESPONDENCE It provides a platform for scientific discussion, feedback, and debate among readers and authors, enhancing the quality and credibility of the research.

ABSTRACT It provides a brief summary of the paper's main arguments, methods, results, and conclusions. It serves as a hook to capture readers' attention, provides a concise summary of the paper's key points, helps readers determine the paper's relevance to their work, and serves as a useful reference for researchers conducting literature reviews.

KEYWORDS AND KEY PHRASES They are included in scientific abstracts to provide a concise and accurate summary of the main topics and themes covered in the research paper, aiding in identifying the paper's relevance and indexing by search engines.

BODY

1. Introduction: This section provides background information on the research problem, describes the research objectives or questions, and outlines the scope and significance of the study.
2. Literature Review: This section critically analyzes previous research on the topic and identifies gaps or limitations in the existing literature.
3. Methods: This section describes the research design, including the study population, sampling methods, data collection procedures, and statistical analyses.

4. Results: This section presents the findings of the study, including data tables, figures, and statistical analyses.
5. Discussion: This section interprets the results in light of the research objectives, compares the findings with previous research, and identifies the implications for theory, policy, and practice.
6. Conclusion: This section summarizes the study's main findings, restates the research objectives, and discusses the contributions and limitations of the research.
7. References: This section lists the sources cited in the article, following a specific citation style, such as APA or AMA.

DATE AND MONTH OF PUBLICATION Helps to assess the currency and recency of the research presented in the article.
