

Item No	Type	Image	Description
1	Press-Fit Bushing (Type P)		Standard bushing pressed directly into a jig plate for precise tool guidance.
2	Head Press-Fit Bushing (Type H)		Similar to Type P but with a head to prevent the bushing from being pushed through the jig.
3	Renewable Bushing		Designed for easy replacement without removing the entire jig; ideal for high-volume production.
4	Liner Bushing		Permanently installed in a jig to accept renewable bushings, preventing wear on the jig plate.
5	Shoulder Bushing		Features a shoulder to rest on the jig surface, providing added stability, especially in thin jigs.
6	Threaded Bushing		Equipped with external threads for screwing into fixtures; allows quick installation and removal.
7	Slip-Fit Bushing		Allows axial movement of the drill, suitable for countersinking or counterboring operations.
8	Custom Bushing		Tailored to specific drilling or machining requirements, including special shapes, materials, or coatings.
