ABOUT GOLDEN MINERALS AND CHEMICALS

Rooted in Materials. Built for Protection.

Golden Minerals and Chemicals (GMC) is headquartered in Vadodara, Gujarat. We started as a premier manufacturer of graded silica sand and river sand for India's construction and chemical industries — and have now brought that same materials mastery to the engineering of underground bunkers and shelters.

Our in-house sand processing plant in Gujarat produces premium fine aggregates that go directly into our high-performance concrete mixes. When you choose GMC, you choose a team that controls quality from raw material to finished structure — an advantage no other bunker builder in India can offer.

We apply the same rigorous quality discipline from our raw material manufacturing directly to every underground shelter we engineer and build.

UNDERGROUND BUNKER — CROSS SECTION VIEW

Pan-India Delivery

THE GMC ADVANTAGE — WHY WE STAND APART

In-House Raw Materials

We manufacture & grade our own silica sand & aggregates — quality from quarry to bunker wall.

Advanced Air Filtration

High-performance air filtration system in every shelter for biological & chemical threats.

End-to-End Delivery

Design, excavation, construction, systems & handover — all managed in-house from Vadodara.

High-Grade Concrete

Superior grade concrete with heavy-gauge steel bars — blast and seismic resistant.

Complete Privacy & NDA

Strict NDA on every project. Location records never retained. All staff background-verified.

Epoxy & Waterproofing

Our own epoxy coatings & waterproofing compounds protect every underground structure.

*"At GMC, the quality of our materials is the foundation of every shelter we build. Your safety starts with our sand, our concrete, and our craftsmanship."
— Golden Minerals and Chemicals, Vadodara, Gujarat*

OUR SHELTER SOLUTIONS

Underground Shelters for Every Threat Level.

Every GMC bunker is custom-designed to match your site, threat assessment, and occupancy requirements.

FURNISHED LIVING AREA

BLAST-PROOF CORRIDOR

01 — UNDERGROUND HOME BUNKERS

Discreet, blast-resistant underground shelters built beneath residential properties across India. Whether you need a compact single-room survival unit or a fully furnished multi-room family shelter, GMC engineers a solution that fits seamlessly into your existing property with minimal surface disruption.

TECHNICAL SPECIFICATIONS

Concrete Strength	High-Grade Reinforced
Blast Resistance	Up to 45 psi
Capacity	2 – 50 Persons
Air System	Advanced Filtration
Duration Rated	30 – 90 Days
Steel Bars	Heavy-Gauge Reinforced

02 — CIVILIAN BLAST SHELTERS

Full-spectrum shelters engineered to protect against multiple threats. Built with high-density reinforced concrete walls, blast doors, and pressurised air filtration systems — providing complete protection for extended periods underground.

TECHNICAL SPECIFICATIONS

Concrete	High-Density Reinforced
Wall Thickness	300 – 600 mm
Steel Reinforcement	Heavy-Gauge Bars
Radiation Shield	Full Fallout
EMP Shielding	Available
Duration Rated	90+ Days

PRODUCT 3 OF 3 — CORPORATE & NGO CONTINUITY BUNKERS

Corporate & NGO Continuity Bunkers.

UNDERGROUND OPERATIONS & DINING HALL

Large-scale underground facilities designed for Indian businesses, industries, and disaster relief organizations. GMC builds hardened continuity-of-operations centers with secure communications infrastructure, medical bays, command rooms, off-grid power and water systems — keeping your people and operations protected and functional during any crisis.

Concrete	High-Grade Reinforced
Capacity	50 – 500+ Persons
Power	Solar + Diesel Generator
Water	Integrated Storage
Communications	Hardened Suite
Steel	Heavy-Gauge Reinforced

WHO WE PROTECT — BUNKERS BUILT FOR EVERY INDIAN NEED

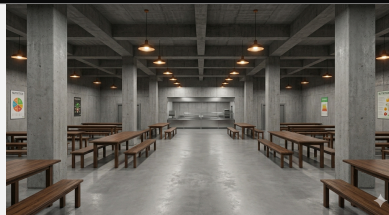

PRIVATE HOMEOWNERS

Protect your family from floods, earthquakes, and civil emergencies with a discreetly installed underground home shelter. GMC builds beneath or adjacent to your existing property with minimal surface disruption.

- › Under your existing home or garden
- › 50 sq ft to 500+ sq ft layouts
- › Standard or luxury fit-out
- › 30-90 day self-sufficient system

CORPORATIONS & INDUSTRIES

Keep your business running and your people safe with a large-scale underground continuity-of-operations bunker. Includes hardened communications, EMP-shielded data infrastructure and long-stay accommodations.

- › Command and control rooms
- › Medical bays and rest areas
- › Modular multi-level layouts

NGOS & DISASTER MANAGEMENT

Permanent and semi-permanent shelter solutions for Indian NGOs, state disaster management authorities, and international relief organizations delivering off-grid scalable underground facilities.

- › Rapid-deployment configurations
- › Medical and triage bay options
- › Off-grid solar and water storage
- › 50 to 500+ persons scalable

HOW IT WORKS — FROM CONSULTATION TO HANDOVER

Your GMC Bunker in 5 Simple Steps.

Every phase managed in-house from Vadodara — delivered pan-India. Fully confidential from day one.

01

PAID CONSULTATION

Confidential threat profile assessment, site survey, and capacity planning with our senior structural engineers. Consultation fee applicable.

↓

02

CUSTOM DESIGN

Structural engineering drawings and a bespoke floor plan prepared specifically for your site conditions and protection requirements.

↓

03

EXCAVATION & SITE PREP

Precision excavation and site preparation by our certified crews, with minimal disruption to your existing property or surroundings.

↓

04

CONSTRUCTION & FIT-OUT

High-grade concrete pour, steel reinforcement installation, blast door fitting, air system, waterproofing, and full interior fit-out.

↓

05

COMMISSIONING & HANDOVER

Full commissioning, systems testing, and hands-on operational training for you, your family, or your team.

THE MATERIALS EDGE — OUR SAND. OUR CONCRETE. YOUR SAFETY.

<p>Graded Silica Sand</p> <p>In-house processed for consistent particle size & purity — critical for high-strength blast-resistant concrete.</p>	<p>Quality River Sand</p> <p>Processed at our Gujarat plant to the highest grade standards — ideal fine aggregate for bunker structures.</p>	<p>Construction Chemicals</p> <p>Our own waterproofing compounds, superplasticizers & bonding agents ensure blast-resistant waterproof walls.</p>	<p>Epoxy Coatings</p> <p>Interior & exterior corrosion-resistant coatings protecting reinforced steel and extending structure life.</p>

FREQUENTLY ASKED QUESTIONS

What type of concrete does GMC use?

GMC uses high-grade reinforced concrete engineered for blast and seismic resistance — far exceeding the strength of ordinary RCC

Can you install a bunker under my existing home?

Yes. GMC specialises in retrofitting underground shelters beneath existing Indian properties using precision excavation with minimal

How long does a bunker take to build?

A standard residential bunker takes 36-48 weeks from design to handover. Larger advanced shelters may take 12-36 months

What threats does a GMC bunker protect against?

GMC shelters are engineered to protect against earthquakes, cyclones, severe flooding, and extended civil emergencies across

Why choose GMC over other builders in India?

GMC manufactures its own silica sand, river sand, and construction chemicals in-house. We control quality from the

Is my project kept confidential?

Absolutely. Every project is protected by a strict NDA. Location records are never retained after completion. All staff are

Do you build bunkers outside Gujarat?

Yes. While our base is in Vadodara, Gujarat, GMC delivers projects pan-India with full site management and logistics support across all major states.
