- 13 Figure 1 shows two identical large semicircles and two identical small semicircles overlapping within a square tile. The length of the square tile is 40 cm. The diameter of the small semicircle is 20 cm.

$$\begin{aligned}
 \text{BIG} \\
 D &= 40 \quad R = 20 \\
 \pi \times R \times R \\
 &= 3.14 \times 20 \times 20 \\

$$\begin{aligned}
 \text{Small } D &= 20 \quad R = 10 \\
 3.14 \times 10 \times 10 &= 314

$$\begin{aligned}

 \text{Shaded} &= 1256 - 314 \\

 \end{aligned}$$

- (a) What is the area of the shaded parts within each tile?
 (b) Figure 2 shows part of a path completely covered with such tiles. The path is 48 m long and 40 cm wide. Find the area of the unshaded path.

Take $\pi = 3.14$.

$$\begin{aligned}
 \text{shaded} &= 942 \text{ cm}^2 \div 2 = 471 \text{ cm}^2 \\
 \text{Rect} &= 20 \times 40 = 800 \\
 \text{Unshaded} &= 800 - 471 = 329
 \end{aligned}$$

$$\begin{aligned}
 20 \text{ cm} &= 1 \text{ Rect} \\
 4800 \text{ cm} &= 4800 \div 20 \\
 &= 240 (\text{Rect})
 \end{aligned}$$

$$\begin{aligned}

At a paint shop, there were some identical pails. 60% of the pails were completely filled with paint. 32% of the pails were $\frac{1}{3}$ filled with paint. The remaining 20 pails were empty. The total amount of paint in the pails was 1590 l.

- 16 Roger took part in a shooting game. He had to collect points by shooting gold and silver stars. He scored 8 points for each gold star shot and 3 points for each silver star shot. At the end of the game, he scored 730 points less from shooting silver stars than gold stars. Roger shot 35 fewer silver stars than gold stars. How many stars did Roger shoot altogether?

- 17 Ken had 2 boxes of beads. Box A had 60 more beads than Box B at first. Ken then moved $\frac{1}{4}$ of the beads from Box A to Box B.

Next, he moved $\frac{2}{5}$ of the beads from Box B back into Box A.

Ken then added another 87 beads to Box A. In the end, the number of beads in Box A was twice the number it contained at first.

(a) How many beads from Box B were moved back into Box A?

(b) How many beads were there in Box A in the end?
