Principles of Operation

The ALTA Wireless Air Quality Sensor measures the particulate matter (PM) based on a user-configurable time interval or Heartbeat. The sensor works by turning on a small fan at the beginning of a measurement cycle to bring in a volume of ambient air and measure the PM content of that sample. The sensor measures PM content using a laser that scatters based on the number and size of particles suspended in the air. This measurement is then sent to the gateway, making the data available in iMonnit, or another approved data service.

It is important to keep the air ports of the sensor clear to ensure proper readings. Remember to:

- ▶ Install the meter with the air ports pointing down to prevent accumulation of dust and moisture.
- ▶ Ensure that the air ports are open to the ambient air without any obstructions within 25 mm (1 inch).

Example Applications

- ▶ Building/Room Air Quality
- ▶ Pollution Sensing
- ▶ Mines and Quarries
- ▶ Cement Factories
- ▶ Construction/Demolition Sites
- ▶ Petrochemicals
- ▶ Agricultural/Waste

1. Response time may vary with stability threshold setting and PM concentration. Increasing the stability threshold will improve response time but reduce stability and accuracy of readings. With higher PM concentrations the sensor will acquire stable readings more quickly.
2. Hardware cannot withstand negative voltage. Please take care when connecting a power device.
3. Operating and storage altitude without DC power supply is -30.48 to 9144 m (-100 to 30000 ft).

This sensor reports the following three values:

- PM1 measurement on Heartbeat
- PM2.5 measurement on Heartbeat
- PM10 measurement on Heartbeat

Commercial-Grade Sensors

Monnit commercial-grade sensors are designed for applications in ordinary environments (normal room temperature, humidity, and atmospheric pressure). Do not use these sensors under the following conditions as these factors can deteriorate the product characteristics and cause failures and burnout.

- Corrosive gas or deoxidizing gas: chlorine gas, hydrogen sulfide gas, ammonia gas, sulfuric acid gas, nitric oxide gas, etc.
- Volatile or flammable gas
- Dusty conditions
- Low-pressure or high-pressure environments
- Wet or excessively humid locations
- Places with salt water, oils, chemical liquids, or organic solvents
- Where there are excessively strong vibrations
- Other places where similar hazardous conditions exist

Use these products within the specified temperature range. Higher temperatures may cause deterioration of the characteristics or the material quality.
