

ALTA® Wireless Accelerometer - Tilt Detection Sensor

General Description

[ALTA® Wireless Accelerometer - Tilt Detection Sensor](#) is a micro-electromechanical systems (MEMS) sensor that continuously measures changes in tilt on a single axis of rotation.

Key Features

- ▶ Two modes of operation
 - ▶ Up/Down detection mode: Up, down, stuck
 - ▶ Delta detection mode: Report on change
- ▶ Axis of rotation is user-selectable
- ▶ Measurement:
 - ▶ Range: -179.9° to +180.0°
 - ▶ Resolution: 0.01°
 - ▶ Accuracy: +/- 0.5°
- ▶ Configurable thresholds for critical condition monitoring

Principles of Operation

The ALTA Wireless Accelerometer - Tilt Detect Sensor continuously monitors a single axis of rotation specified by the user. The sensor has two modes of operation. In Up/Down mode the sensor is triggered when its pitch changes between user configurable angles defined as Up, Down, and Stuck. In Delta mode the sensor is triggered when the absolute difference between the current sensor angle and the last reported angle exceeds a user-defined Delta Value. On a user-configurable time interval or Heartbeat, or when the sensor is triggered, the current measurement is then sent to the gateway, making the data available in iMonnit or another approved data service.

Example Applications

- ▶ Inclination monitoring
- ▶ Bay doors
- ▶ Loading gates
- ▶ Overhead doors

Commercial-Grade Sensors

Monnit commercial-grade sensors are designed for applications in ordinary environments (normal room temperature, humidity, and atmospheric pressure). Do not use these sensors under the following conditions as these factors can deteriorate the product characteristics and cause failures and burnout.

- Corrosive gas or deoxidizing gas: chlorine gas, hydrogen sulfide gas, ammonia gas, sulfuric acid gas, nitric oxide gas, etc.
- Volatile or flammable gas
- Dusty conditions
- Low-pressure or high-pressure environments
- Wet or excessively humid locations
- Places with salt water, oils, chemical liquids, or organic solvents
- Where there are excessively strong vibrations
- Other places where similar hazardous conditions exist

Use these products within the specified temperature range. Higher temperatures may cause deterioration of the characteristics or the material quality.

Industrial-Grade Sensors | Type 1, 2, 4, 4X, 12, and 13 NEMA-Rated Enclosure

Monnit's industrial sensors are enclosed in reliable, weatherproof NEMA-rated enclosures. Our NEMA-rated enclosures are constructed for both indoor or outdoor use and protect the sensor circuitry against the ingress of solid foreign objects like dust and the damaging effects of water.

- Safe from falling dirt
- Protects against wind-blown dust
- Protects against rain, sleet, snow, splashing water, and hose-directed water
- Increased level of corrosion resistance
- Will remain undamaged by ice formation on the enclosure
