Materia prima

El material de fricción es la parte más importante de una pastilla de freno y todas las pastillas **TRW** están libres de metales pesados que contaminan el subsuelo y mantos friáticos.

Utilizamos la combinación óptima de las materias primas desde el hule hasta el grafito, lo que garantiza un coeficiente de fricción estable y el frenado más seguro en cualquier condición.

Pre-quemado (scorching)

El escorchado o pre-quemado de una balata es un proceso que consiste en calentar el material de las pastillas de freno en una plancha a 600-700°C. No todos los proveedores del mercado de repuesto llevan a cabo procedimientos de escorchado al mismo nivel que **TRW**.

El escorchado mejora significativamente:

- **Comportamiento durante el uso:** El rendimiento se mejora en gran medida la primera vez que el conductor aplica los frenos (asentamiento rápido); las balatas que no pasan por este proceso alcanzarán este nivel de rendimiento al llegar a 200 kilómetros de uso continuo.
- **Desvanecimiento Inicial (fading):** El fading aumenta la fuerza y presión requerida para mantener la desaceleración del vehículo evitando así cristalización prematura y molestos ruidos.

Nuevo desarrollo en el prequemado (scorching)

TRW hace tiempo que cambió el proceso de escorchado de una flama convencional a una placa de calor avanzada; que es hoy en día un estándar de OE.

Esto quiere decir que durante el calentamiento de la placa para el escorchado, la balata es presionada mediante una prensa (1 Tonelada) a la placa calentada, acelerando así su inflamación por presión y calentamiento. Esto significa menos energía utilizada en el proceso.

Con lo cual **TRW** se catapulta como una empresa responsable en el cuidado del medio ambiente.

Tecnología de molde profundo

Las pastillas de freno **TRW** se fabrican utilizando la tecnología de molde profundo, un proceso llevado a cabo por prensas de molde automático.

El principal beneficio de este proceso es que la densidad y la porosidad del material son más consistentes, lo que resulta en una significativa reducción en la aparición de rechinado, mejorando así la comodidad del conductor.

La seguridad es lo primero

Todas las pastillas de freno **TRW** se someten a un riguroso conjunto de pruebas tanto durante el proceso de producción como en las carreteras. **TRW** refleja al mercado de recambio la experiencia y procedimientos de prueba del OE.

Muchos proveedores del mercado de recambio en Europa consideran su adhesión a las especificaciones ECE R90 como una marca de excelencia, pero para **TRW** esto es un mínimo.

TRW lleva a cabo extensas pruebas en el camino para asegurar un programa de pruebas completo, que incluye pruebas de rendimiento, pruebas de confort y la prueba de descenso alpino.

Recomendaciones

- Asegúrese que el líquido para frenos es el adecuado para el vehículo, verificando el tipo de DOT o LF en el manual del mismo y/o en el tapón de depósito.
- Revise que la botella esté bien sellada. Si observa alguna alteración, no lo use. Todos los envases de los líquidos para frenos TRW cuentan con sello inviolable.
- Evite adquirir líquidos para frenos de dudosa procedencia y sin certificaciones internacionales, ya que corre el riesgo de obtener uno de mala calidad poniendo en riesgo la integridad física del conductor y dañar el automóvil.
- Si observa alguna deficiencia en la consistencia del líquido de frenos no lo utilice. Recuerde que este debe ser viscoso.
- No diluya ni combine el líquido de frenos con agua u otro líquido, esto provocará corrosión en las partes metálicas del vehículo.
- No combine diferentes tipos de líquidos para frenos, ya que al mezclar diferentes tipos de DOT modifica la composición provocando algún daño en el vehículo.
- El líquido para frenos es un producto tóxico e inflamable. Jamás lo deje al alcance de situaciones riesgosas o de menores de edad.
- Asegúrese de purgar el sistema hidráulico de frenos y rellenarlo con líquido para frenos nuevo, cada vez que realice un cambio de balatas.
- Recomiende al conductor que verifique el nivel de líquido para frenos al menos cada 6 meses.
