

Traditional card-based transactions are increasingly vulnerable — fraud, identity misuse, and unauthorized access continue to cost billions. Current POS systems offer little control or visibility to cardholders and almost no real-time authentication.

DualPay is a next-generation payment terminal that verifies card transactions through real-time facial recognition, empowering users with biometric-level security and unmatched control. Each card is encrypted and linked to the cardholder's face — no face, no payment. DualPay isn't just safer — it's smarter.

Face the Future of Payments

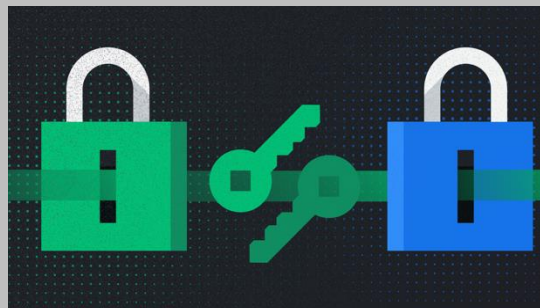

Our Vision

“To make payments not just convenient, but truly secure, by putting **identity** back in the hands of the rightful owner.”

We're building more than a product. We're building the **future standard** of personal finance security. Glance. Tap. Done.

Built for a Secure, Seamless Future

- Biometric facial authentication for every transaction
- **User-controlled permissions:** assign payees, set limits, define merchant categories
- **Dual-display terminal** with real-time feedback and liveness detection
- **Offline fallback mode** with secure local storage
- **Compliant end-to-end encryption**
- **Instant mobile alerts** for unmatched control and fraud prevention.

Business Model

- **Licensing** to banks, fintechs, and terminal providers
- **Hardware sales** to retailers and hospitality groups
- **Subscription services** for fraud analytics and account controls
- **APIs & SDKs** for seamless integration into enterprise systems

Roadmap

- **2025** — Complete prototype & closed beta
- **2026** — Secure full patent & pilot with early partners
- **2026** — Launch across key UK retailers
- **2027+** — Expand licensing across EU and North America

Join Us

We're seeking forward-thinking partners and investors to bring DualPay to life. With the groundwork secured — and a provisional patent filed — we're ready to scale.

Let's redefine payment authentication together.
