# Whitepaper: Baby Husky SX

## Introduction: BHSX

Baby Husky SX was created with the intention of being a meme coin for the Siberian Husky dog breed, with the aim of reaching the moon with Elon Musk's Space X.

Today I'm here to introduce you to our amazing Siberian Husky puppy, Nick! At just 4 months old, Nick is not only adorable, but also has a very special dream: he wants to go to the moon! Nick is a real explorer. His soft, thick fur is a beautiful shade of black and white, and his blue eyes seem to reflect the vastness of the sky. Since arriving at our home, he has shown an insatiable curiosity for everything around him. But what really fascinates him are the stars!

Whenever we look up at the night sky, Nick sits with his front paws crossed and watches the stars as if he's waiting for his big trip. He imagines what it would be like to run across the lunar surface, feel the gravity and reach the moon with Elon Musk's incredible x spacecraft.

## Security audits

- **PeckShield**

PeckShield is a company specializing in security in the blockchain and cryptocurrency ecosystem. With a focus on smart contract auditing, vulnerability monitoring and fraud prevention, PeckShield has become a benchmark in the sector. It offers crucial services to protect blockchain projects and platforms from attacks and exploits, helping to guarantee the security of transactions and the integrity of decentralized networks. Its importance is growing, since as the cryptocurrency market expands, so does the threat of cyber attacks, making it essential to have

robust security solutions to protect investors and developers. With Smartdefi's launchpad, #BHSX already comes with the audit completed, guaranteeing more security, reliability and cost savings in the development of the project.

- **SourceHat**

SourceHat is a company specializing in security auditing for smart contracts and blockchain projects. With the growth of the cryptocurrency market and the increase in cyber attacks, SourceHat stands out for providing a thorough code analysis, identifying vulnerabilities and security flaws before they can be exploited. SourceHat's auditing is key to guaranteeing the integrity of smart contracts and user confidence in decentralized platforms. By carrying out these services, the company contributes to protecting investments and building a more secure blockchain ecosystem, preventing fraud and financial losses.

## About Baby Husky SX

The Baby Husky SX was created with the intention of being a meme coin for the Siberian Husky dog breed, with the aim of reaching the moon with Elon Musk's X spacecraft.

- **Passive income**

Receiving stake rewards is an essential process within the cryptocurrency ecosystem, especially in networks that use the Proof of Stake (PoS) consensus mechanism. When staking, users block

their cryptocurrencies in a wallet to help validate transactions and ensure network security. In return, they receive rewards, usually in the form of more tokens. The importance of this process goes beyond simply generating passive income: it encourages the active participation of users in the maintenance and growth of blockchain networks, while promoting decentralization. In addition, staking rewards contribute to increasing the trust and security of cryptocurrencies, making them more stable and resilient. **When staking your #BHSX 0.7% of each buy transaction and 0.7% of each sell transaction goes to the stakers**, remember the higher the trading volume, the higher your passive income.

## Reward for Holdar BHSX

Holding a coin, i.e. keeping a cryptocurrency for a long time without selling it, is of significant importance to both investors and the cryptocurrency ecosystem in general. For investors, the concept of "HODL" (a term popularized by a typo of "hold") is based on the belief that by holding on to coins, it is possible to benefit from long-term appreciation, especially in volatile markets. This can result in large profits, especially when the currency goes through upward cycles.

In addition, by holding the currency, the investor avoids making impulsive decisions based on short-term fluctuations in the market. This contributes to a more disciplined and strategic approach. **By leaving your #BHSX in your wallet without selling it, you will receive 0.1% of each purchase transaction and 0.1% of sales transactions go to loyal holders**, remember the higher the trading volume, the higher your reward in #BHSX.

## Asset Guarantee

Imagine a cryptocurrency not only affected by hype and flaws, but also with an integrated safety net. That's what Baby Husky SX offers through the Smartdefi platform.

Each purchase and sale transaction of #BHSX contributes 0.1% to a reserve fund called asset ballast. This fund has BNB in its liquidity pool.

This reserve grows continuously, creating a minimum price for the token. The base value of the token will not fall below this floor, even if the market falls.

This stability protects you from scams and pump and dump schemes. You can finally hold and trade tokens that have real value, not just momentary hype.

- **Burning**

Token burning is an important mechanism in the cryptocurrency ecosystem, which involves permanently removing a specific number of tokens from circulation. In #BHSX **1.2% of each purchase** and **1.2% of each** sale are burned and automatically removed from circulation, this process is key to reducing the total supply of the coin, which can generate a scarcity effect, helping to increase its value over time. Burning is also a way of fighting inflation and improving the stability of a cryptocurrency, as it controls the uncontrolled growth of supply. In addition, burning is often used as a way of rewarding the community and increasing investor confidence, showing a commitment to maintaining the value of the currency in the long term.

- **Tokenomics**

*Baby Husky SX has a total supply of 100 billion tokens, where 100% of our total supply in tokens was allocated to our pre-sale event.*

Type of Tax	Buy	Sell
Asset guarantee	0,1%	0,1%
Burning	1,2%	1,2%
Liquidity injection	1,4%	1,4%
Marketing	3%	3%
Reward Stake	0,7%	0,7%
Reflections	0,1%	0,1%
Protocol fees	0,5%	0,5%

## Conclusion

Our Baby Husky SX meme project combines innovative and attractive features for the crypto community, offering a dynamic and sustainable ecosystem. With staking rewards, it encourages investors to keep their tokens, generating passive income and strengthening the security and decentralization of the network. The burn in transactions feature reduces the supply of tokens over time, creating a deflationary effect that can potentially increase the value of the token. In addition, the reflection system rewards holders, making the process of holding the currency

advantageous in the long term. Taken together, these elements provide a well-structured tokenomics model that aims not only to enhance the value of Baby Husky SX, but also to offer users a safer and more rewarding investment experience.
