AI Made Me a Straight-A Student

5 n8n Workflows You Can Copy Today

Welcome to the AI Challenge!
This guide shows how students (ages 12–21) can use **n8n + AMDR Automate AI** to create smart, no-code workflows that make studying, organizing, and life management easier. Every example here uses a real workflow visual and explains its benefits — from academic success to better social balance.

1. Study Reminder Flow

Automatically schedule reminders before exams or assignments using Google Calendar + n8n. Never miss a deadline again!

2. Auto-Save Class Notes to Google Drive

Automatically sync notes from your phone or tablet to a structured Google Drive folder using n8n.
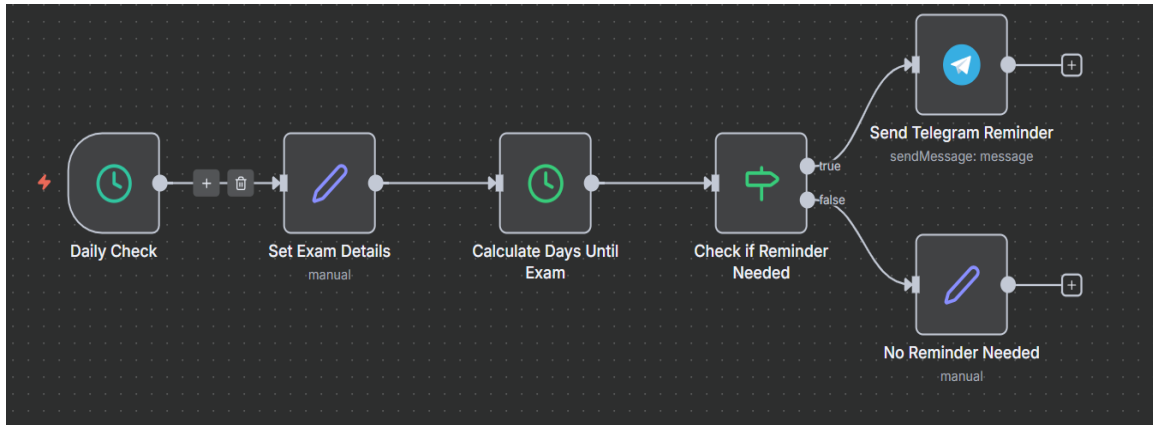

3. Social Event Notifier

Build a workflow that notifies your group chat (Discord or Telegram) about upcoming events or club meetings.

4. Class Schedule Optimizer

Combine your class schedule, commute time, and study blocks into a single automated daily planner.

5. DM Auto-Responder

Create a fun workflow that auto-replies to messages with custom responses (great for school pages or clubs).

How to Build the Study Reminder Flow in n8n

1. **Start with a Trigger Node:** Use a *Daily Schedule Trigger* to check every morning for upcoming exams.
2. **Set Exam Details:** Add a *Manual Input* or *Spreadsheet Node* with exam dates and subjects.
3. **Calculate Days Until Exam:** Use a *Date & Time Node* to compute how many days are left before each exam.
4. **Conditional Check:** Add an *If Node* to determine if an exam is within a set threshold (e.g., 3 days away).
5. **Send Reminder:** If condition is true, connect to a *Telegram Node* that sends a custom reminder message.
6. **No Reminder Path:** If false, use a *Manual Node* labeled "No Reminder Needed" for workflow clarity.
7. **Activate the Workflow:** Save and enable it — your reminders will now send automatically each day!

This simple workflow is perfect for beginners and helps you stay on top of assignments and exams with ease.

Ready to Build?
Start your first automation challenge at **AMDR Automate AI** and learn how to use n8n to level up your academic, social, and creative life.
