

## TRANSURETHRAL RESECTION OF THE BLADDER (TURBT)

1. A transurethral resection of the bladder is received, consisting of multiple brownish fragments weighing X g in total and measuring XXX cm in aggregate.
2. Externally, the fragments show a homogeneous / heterogeneous appearance, with a brownish / whitish coloration and a papillary / irregular / convoluted morphology. // Intermixed haemorrhagic fragments / calculi / necrotic material with X characteristics are identified.
3. Representative sections are submitted in X blocks.

### TO CONSIDER

- Diagnostic and therapeutic endoscopic procedure for bladder neoplasms, by which all submitted tissue fragments are obtained.
- Measure and describe the external surface.
- Submit representative sections:
  - Depending on the author, some recommend entirely submitting the specimen; others suggest entirely submitting the specimen up to a maximum of 20 blocks.
  - Do not submit haemorrhagic fragments or calculi.
  - Do not overfill the blocks to the point where tissue fragments may overlap.
