Gentle Antiseptic Solution for Effective Wound Cleaning and Burn Care

## CHEMICAL COMPOSITION

Chlorhexidine 0.05% & Cetrimide 0.5% Antiseptic Solution

## PRODUCT SPECIFICATIONS

Cetrimide is a quaternary ammonium antiseptic with actions and uses typical of cationic surfactants. These surfactants dissociate in aqueous solution into a relatively large and complex acation, which is responsible for the surface activity, and a smaller inactive anion. In addition to emulsifying and detergent properties, quaternary ammonium compounds have bactericidal activity against Gram positive and, at the higher concentrations, against some Gram negative bacteria.

## AREAS OF USE

CHG Chlorhexidine 0.05% Cetrimide 0.5% solution ideal for cleansing and irrigating dirty wounds. It is a medical-grade antiseptic prevents infection and it effectively flushes small particles from a dirty wound. IT is sterile, easy to use and stops cross-contamination, it cleanses the wound to ensure dressings and pads adhere correctly.

## USE

Apply the minimum amount necessary to cover the wound area and wash gently. Leave the area to dry by air for 3 minutes.
