

# DATASHEET

## CHLOROHXADEEN 2%

Effective formula to sterilize the nerve canal and reduce gum inflammation and bleeding.

### CHEMICAL COMPOSITION

2% Chlorhexidine Gluconate

### PRODUCT SPECIFICATIONS

Chlorhexidine is used to treat gingivitis. It helps to reduce the inflammation (redness) and swelling of your gums and to reduce gum bleeding. Gingivitis is caused by the bacteria that grow in the coating (plaque) that forms on your teeth between tooth brushings.

### AREAS OF USE

The 2% Chlorhexidine Gluconate solution is a versatile antiseptic used in medical, dental, and hygiene applications. It effectively treats gingivitis by reducing gum inflammation and plaque-causing bacteria. For skin prep before surgery, it cleanses and disinfects.

### USE

Dental Use: Use as directed to reduce gingivitis and plaque buildup.  
Medical Use: Use to clean and sterilize the nerve canal and skin prior to surgery, reducing the risk of infection.
