**Software Solutions**

# To Efficiency Utilities

1.

## MIU - Meter Interface Unit

*Read data from water meter only*

*LoRaWAN / NB-IoT Communication Type*

*IP68, IK09 & International Certifications*

Collection data with

# High Accuracy

in real-time

Ensure

# Cost Effective

by installation & replacement

Up to

# 10 years Battery Life

transmission interval is 3 times/day

Transmit & receive data over

# LPWAN

technology

2.

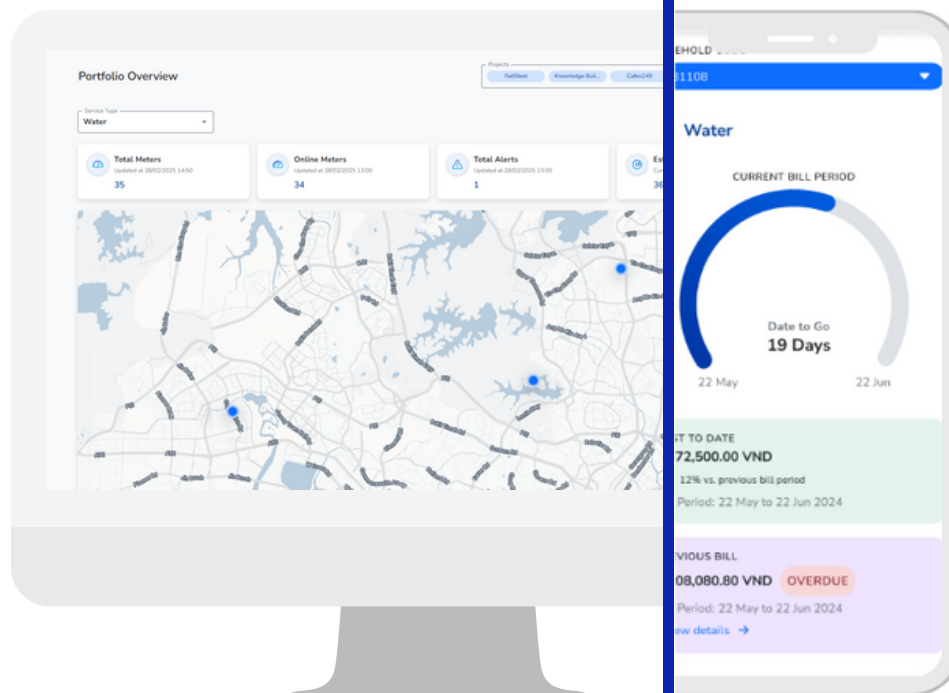

## 8TEN - Water Meter Data Management System (MDMS)

Management Portal

For Tenants

For Utility Operators

Customer Portal

2.2

## 8TEN - MDMS Key Benefits

Support

### Multi-Meter Compatibility

in one platform, any meter

Multi-level access to

### Municipal Utilities / DMAs

for water loss detection & resource allocation

Customize

### Widgets Analysis & Alerts

for lost & recovered water (LRW)

With

### Scalability

to handle growing demands

Provide

### Households Mobile App

ensures seamless, and transparent operations

Streamline

### Billing & Invoicing Process

by one-time setting

# MUNICIPAL UTILITY OVERVIEW PAGE

## 1. Solutions

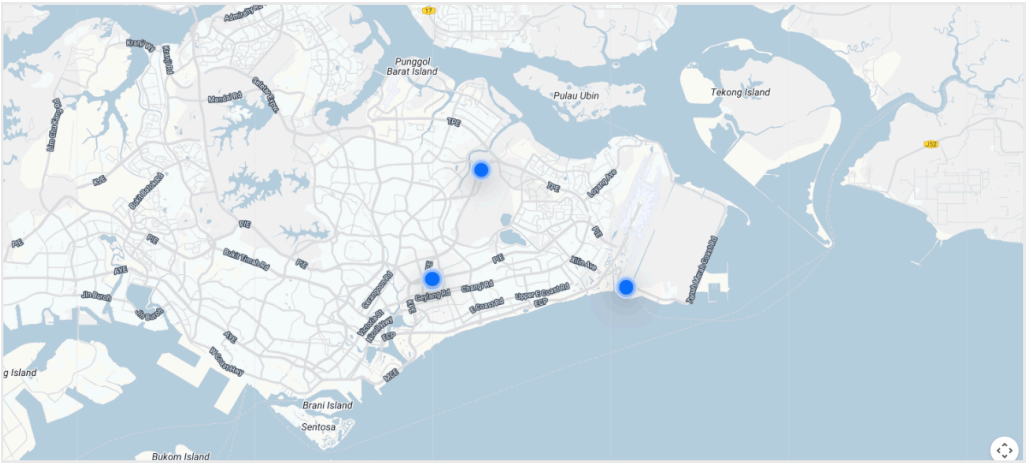

### Visualization

- Displays the location of multiple utilities and allows operators to drill down into each utilities.
- Provides an overview of key performance indicators for each utilities.
- Compares energy usage across multiple utilities against the average usage line.

## 2. Benefits

- Enhances Operational Efficiency: Providing a clear overview of multiple utilities in one interface.
- Enables Data-driven Decision-making: Through real-time insights into key performance indicators.
- Identifies Energy Inefficiencies: By comparing usage trends against the average, allowing for proactive optimization and cost reduction.

## 3. How It Works

# MAP VIEW

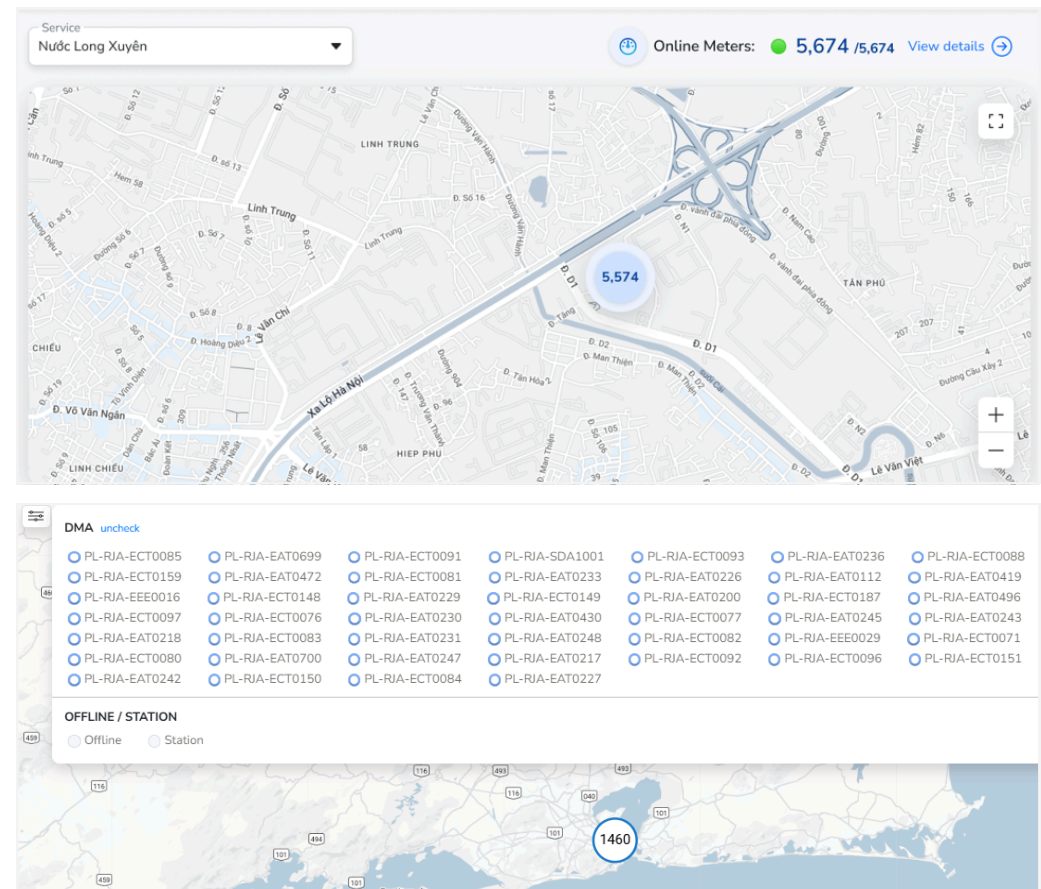

## 1. Solutions

- **Device Location Overview:** The Map View provides a visual representation of the devices' physical locations, marked with interactive icons.
- **Status Filtering for Quick Insights:** Filter devices based on their operational status. Users can select specific filters to display only devices of a particular status (e.g., online, offline).
- **DMA Zoning:** The Map View offers the ability to divide and display devices by District Metered Areas (DMAs) within your utility network.

## 2. Benefits

- **Efficient Management:** Centralizes device monitoring and status tracking, enabling better decision-making and management of your assets from one place.
- **Issue Resolution:** Easier identification and resolution of issues.
- **Enhanced Usability:** Intuitive interface improves user experience.

## 3. How It Works

## 1. Solutions

### Usage Chart

- Detailed Visualization: Track energy usage by days, months, and years, as well as within specific time ranges.
- Peak Consumption Identification: Recognize periods of peak energy consumption.
- Loss Data Detection: Identify energy loss data by month, day, and hour.
- Incident Identification: Detect and analyze abnormal incidents.

### Utility Performance Overview

- Comprehensive Indicators: Get an overview of key indicators such as total revenue, billings, energy usage, and total alerts.

## 2. Benefits

- Operational Efficiency: Streamlines monitoring and decision-making processes.
- Cost Savings: Identifies peak consumption periods to optimize energy usage.
- Proactive Management: Alerts enable timely intervention to prevent issues.

## 3. How It Works

## PERFORMANCE OVERVIEW

## 1. Solutions

- Database: Stores tenant details, household locations, household devices, and payment history.
- Search and Filter: Allows searching for households by building or filter usage by services.

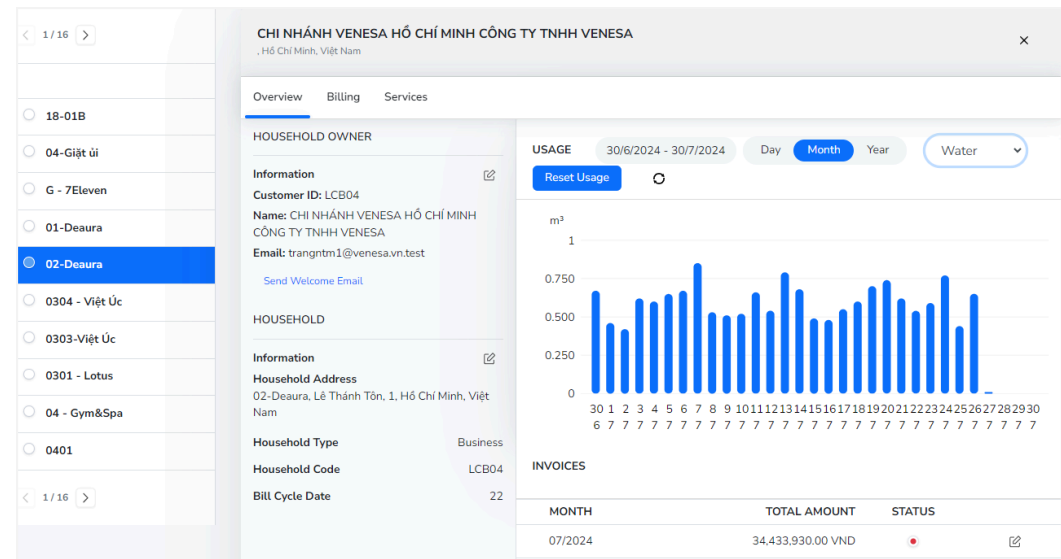

## 2. Benefits

- Streamlined Processes: Centralized data management reduces manual tasks.
- Effective Communication: Ensures prompt and clear communication with tenants.
- Improved Satisfaction: Efficient management leads to higher tenant satisfaction.

## TENANTS MANAGEMENT

## 1. Solutions

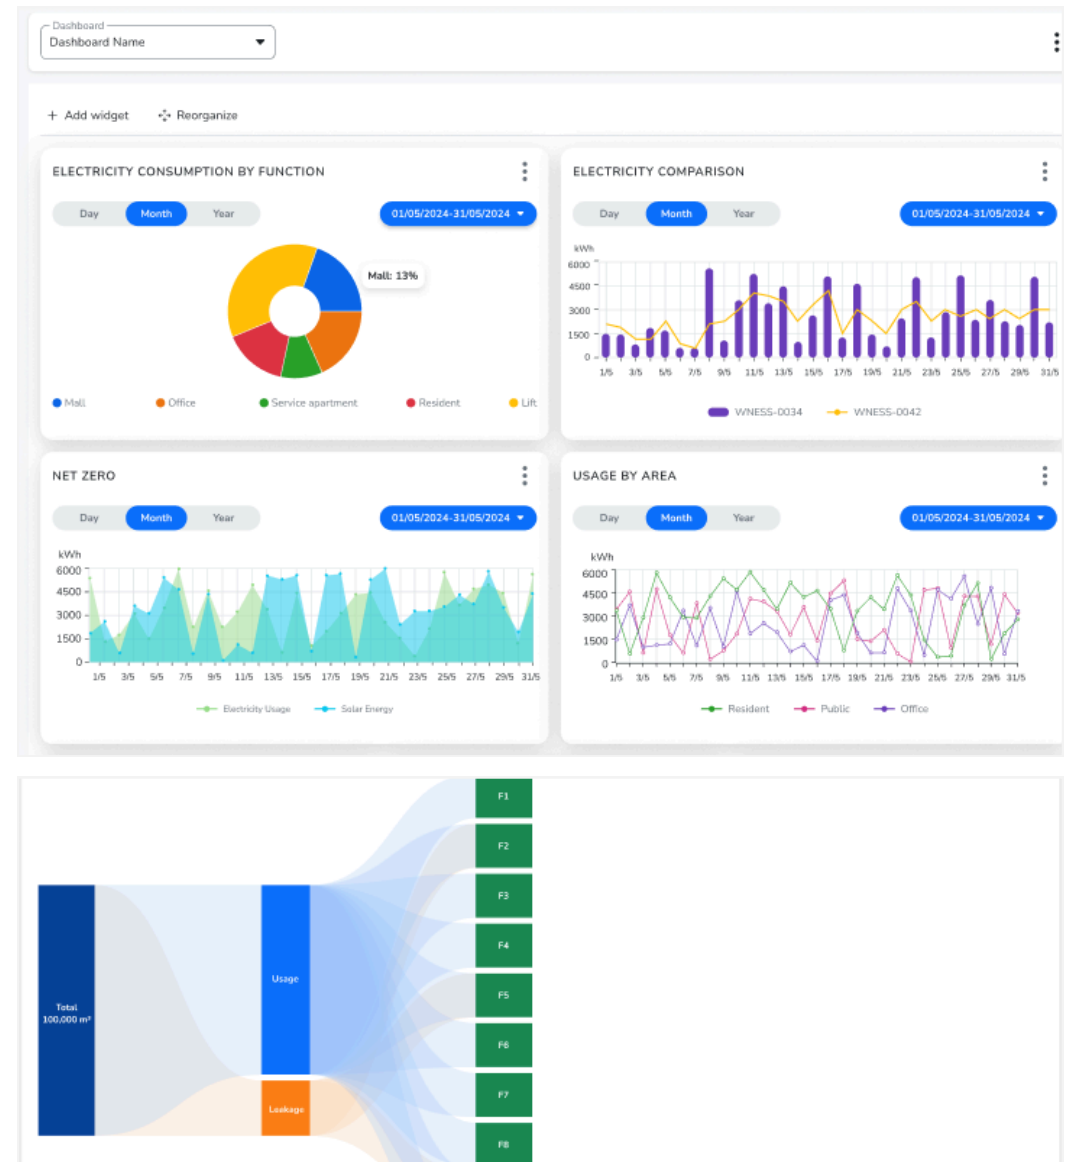

- **Advanced Analytics Platform:** Centralized system for data aggregation, analysis, and visualization.
- **Leakage Detection:** Provides a leakage chart to identify and quantify leakage rates from specific meters.
- **Customizable Dashboard:** Allows users to create personalized dashboards and widgets to manage energy based on their specific needs.

## 2. Benefits

- **Data Visualization:** Visual representation of data for easier interpretation and analysis.
- **Immediate Leakage Detection:** Quickly identifies and addresses leakage issues to prevent resource wastage.
- **Informed Decision-Making:** Data-driven insights support strategic planning and decision-making.

## DATA ANALYSIS

## 3. How It Works

## BILLING & INVOICE & PAYMENT

## 1. Solutions

- **Automated Generation:** Bills are generated automatically from consumption data.
- **Customization:** Billing parameters can be customized to meet specific requirements.
- **Comprehensive Reporting:** Easily download for billing reports.
- **Delivery:** Invoices are sent directly to end-users via email or accessed through the app.

## 2. Benefits

- **Accuracy:** Ensures precise and consistent billing.
- **Efficiency:** Reduces the time and effort required for manual billing.
- **Convenience:** Easy access to bills and payments through the platform.

## TENANT/USER APP

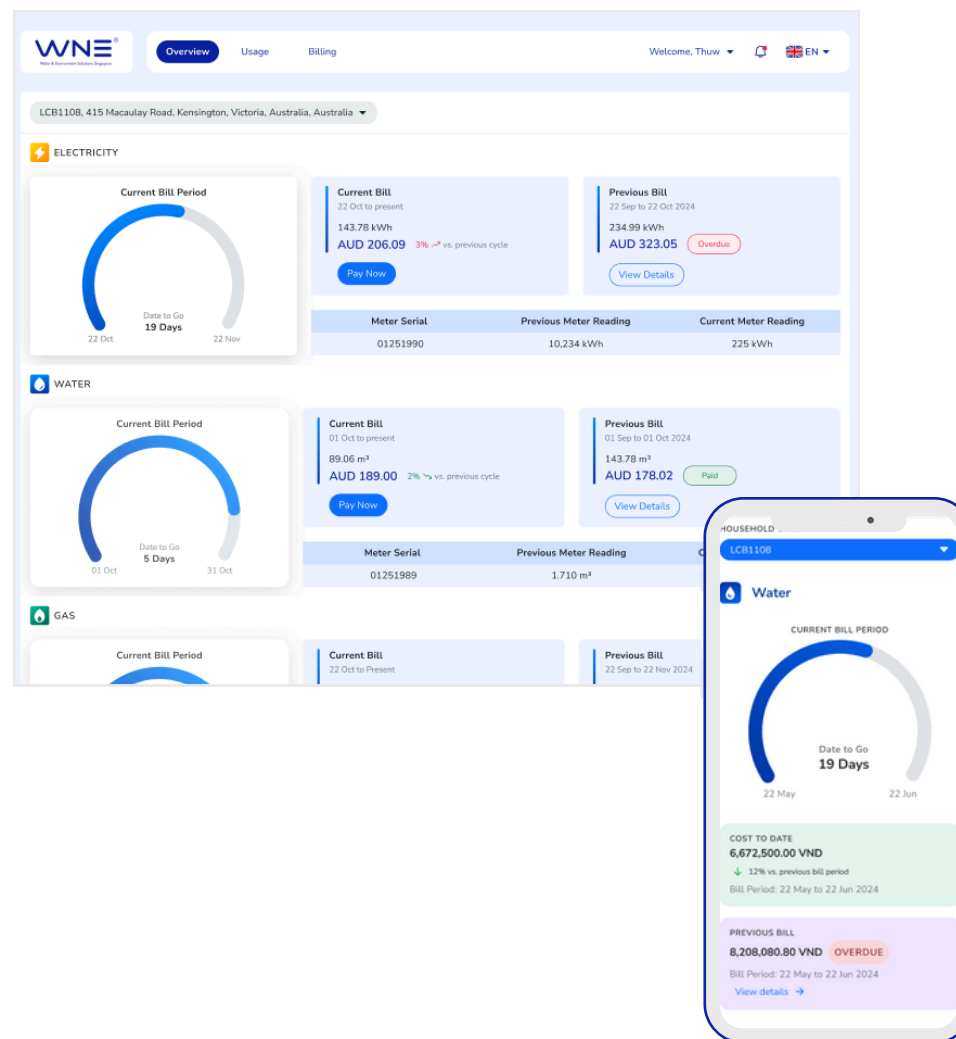

### 1. Solutions

- Access: Tenants can view and download invoices, and make payments directly through the app.
- Account Management: Tenants can update their contact information and access customer support.
- Communication: Streamlines communication between tenants and management.

### 2. Benefits

- Transparency: Provides clear and transparent billing information.
- Convenience: Simplifies the payment process for tenants.
- Enhanced Experience: Improves overall tenant satisfaction and engagement.
