The TDL Laboratory Guide is designed to give you an easy-to-use reference for the most regularly requested services, pathology profiles and tests. If you are not able to find details of the tests and services you need, please contact the laboratory on **020 7307 7373** for advice and information.

For details about all services, please contact the laboratory on **020 7307 7373**, or visit **[www.tdlpathology.com](http://www.tdlpathology.com)**

TDL services include:

- Comprehensive, multidisciplinary pathology services
- Specialist diagnostic analysis for other laboratories
- Pathology partnerships with NHS Trusts
- Support for CRO and pharmaceutical companies

# Sonic Healthcare core values

Sonic Healthcare's core values were created by our staff more than 20 years ago, and act as guiding principles for how we conduct ourselves as an organisation.

Our core values set the standard for the collegiate and supportive way in which we behave towards one another, as well as the professionalism with which we conduct ourselves in our day-to-day duties. Individually, our core values articulate our commitment to medical excellence. Collectively, they empower our people to deliver exceptional medical services to doctors and patients.

Since their inception, Sonic Healthcare's core values have been embraced by Sonic Healthcare staff around the world as a unifying code of conduct.

## **Commit to service excellence**

- To willingly serve all those with whom we deal, with unsurpassed excellence.

## **Treat each other with respect and honesty**

- To grow a workplace where trust, team spirit and equity are an integral part of everything we do.

## **Demonstrate responsibility and accountability**

- To set an example, to take ownership of each situation to the best of our ability and to seek help when needed.

## **Be enthusiastic about continuous improvement**

- To never be complacent, to recognise limitations and opportunities for ourselves and processes and to learn through these.

## **Maintain confidentiality**

- To keep all information pertaining to patients, as well as professional and commercial issues, in strict confidence.

# Complaints policy/procedure

It is the aim of the company to maintain its core values. Two of these core values are to commit to service excellence, and to be enthusiastic about continuous improvement.

Where a doctor or patient needs to raise a complaint about service levels they should contact **Cyril Taylor**, Laboratory Service Compliance Director, or **Annette Wilkinson**, Director of Business Development and Service at **[tdlservice@tdlpathology.com](mailto:tdlservice@tdlpathology.com)** giving details of the complaint.

The initial complaint will be acknowledged within 3 working days and the investigation, and any follow up actions will be completed within 30 days.

The information forwarded will be treated as confidential and investigated by the above persons. This process will link into Quality Management procedure for incident investigation and subsequent corrective and preventative actions will be introduced where needed.

Internally, any complaints received will be shared and discussed at Executive Director level where appropriate, as it is the intention of TDL to provide unsurpassed excellence of service.

### Patient Reception/ Phlebotomy Services

Patient Reception provides a sample collection service for patients attending at the request of their doctor/clinic.

Patients, of all ages, are welcome to attend Patient Reception, 76 Wimpole Street, London W1G 9RT for their samples to be taken. Patients need to be referred by their clinic or doctor and are required to bring a request form or letter of referral.

Appointments are only necessary if a patient needs specialised investigations or care. Instructions can be telephoned or emailed ahead of the patient's attendance, if this is more convenient.

Sample-taking is undertaken by qualified phlebotomy staff for which a standard sample-taking fee of £60.00 is charged to patients. Doctors and clinics are charged £35.00 for each patient. Sample-taking services for Extended Tests and Drugs of Abuse with Chain of Custody, and semen analysis are routinely available.

Cervical cytology, HVS and cervical swabs are not taken at Patient Reception.

Patient Reception sample-taking services are not available in Manchester.

**TDL Patient Reception**  
76 Wimpole Street,  
London, W1G 9RT, UK

Tel: +44 (0)20 7307 7383

Email: [patientreception@tdlpathology.com](mailto:patientreception@tdlpathology.com)

Out of hours samples can be dropped off at this location. **Phlebotomy Services are only available at this location.** Patients' samples cannot be taken at the main laboratory.

#### Opening times

Monday to Friday 7.00am – 7.00pm

Saturday 7.00am – 1.00pm

Closed Sunday and public holidays.

### TDL Collect: specimen collection services by courier

TDL Collect provides a dedicated medical sample collection service (vans by arrangement) on a scheduled or ad hoc basis.

No charge is made for collections from practices within the M25. Courier collections from private addresses are not undertaken.

The courier collection service for Inner London postcodes operates on a 24/7 basis, as shown. Postcodes extending beyond to the M25 operate from 9.00am to 8.00pm. Outside the M25, and throughout the UK, sample collections are by arrangement and may incur courier charges.

TDL Collect Online Courier Booking is a time-saving option for arranging couriers for sample collection: [www.tdlpathology.com/services/tdl-collect/](http://www.tdlpathology.com/services/tdl-collect/)

Please contact [couriers@tdlpathology.com](mailto:couriers@tdlpathology.com) for your practice's secure login and password.

**High-risk samples should be clearly labelled and packed separately from other samples.**

**TDL's couriers cannot transport samples containing Hazard Group 4 Pathogens such as Ebola Fever or Haemorrhagic Fever.**

SCAN ME

Use the TDL Collect Online Courier Booking service to arrange a courier for sample collection:

[www.tdlpathology.com/services/tdl-collect/](http://www.tdlpathology.com/services/tdl-collect/)

Courier collection from Inner London postcodes (see below) operates 24/7:

E1, E2, E3, E4, E5, E6, E7, E8, E9, E10, E11, E12, E13, E14, E15, E16, E17, E18, E20

W1, W2, W3, W4, W5, W6, W7, W8, W9, W10, W11, W12, W13, W14  
WC1, WC2

Courier collection from postcodes extending beyond Inner London to within the M25 operate from 9.00am to 8.00pm

## Helpful information

### Semen Analysis

Semen samples need specialist and immediate handling within the laboratory. For this reason, all requests for Semen Analysis must be made by appointment. Practices or patients can make an online appointment at [www.tdlpathology.com/andrologybooking](http://www.tdlpathology.com/andrologybooking) or call **020 7025 7940** to make appointments and confirm instructions for sample collection. There is an attendance fee of £50.00.

- Patients must abstain from ejaculation for at least 2 days but not longer than 5 days before the test. Instructions will be given to patients at the time of arranging their appointment.
- Semen samples should be produced at The Doctors Laboratory, 76 Wimpole Street, unless there are exceptional circumstances. If there are exceptional circumstances please contact **TDL Andrology** on **020 7025 7940** for special arrangements and instructions. Refer to Andrology, see page 67.

Semen Analysis services are not provided in Manchester.

SCAN ME

To make an appointment for Semen Analysis online please visit:

[www.tdlpathology.com/andrologybooking](http://www.tdlpathology.com/andrologybooking)

### Patient request form

To comply with good clinical practice it is important that there is one request form for each patient's request, and specimens and form are correctly matched, fully labelled, and include three unique patient identifiers and other relevant Information.

- First name, Surname, Date of birth, Hospital/Clinic Number, Medical Record Number (MRN) are examples of patient identifiers
- Time and Date of collection of samples
- Type of sample and Anatomical site, where appropriate (e.g. swabs)
- Relevant clinical information
- Relevant details of medication
- High-Risk Samples should be clearly identified on the form and individually packed separately from other samples
- Known cases of Hazard Group 4 pathogens such as Ebola or Viral Haemorrhagic Fever must NOT be sent to the laboratory. If there is doubt about a patient's symptoms and presentation please contact the Imported Fever Service on 0844 778 8990 for advice before sending samples to TDL or any laboratory.

If additional tests are required for a sample already received please contact the laboratory on **020 7307 7373** with your request for specific further analysis. Samples are stored within timeframes according to their discipline. Laboratory staff will advise on the ability to undertake further testing from samples already received in the laboratory.

SCAN ME

Download TDL Request Forms from:

[www.tdlpathology.com/tests/request-forms/](http://www.tdlpathology.com/tests/request-forms/)

## Helpful information

### Emailed requests for add ons

The majority of samples received in the laboratory are kept for one week. If sample type and volume allow, further testing can be requested by telephone on **020 7307 7373** or by email to **addons@tdlpathology.com**. Please specify the details of the test(s) to be added.

If requests for **Add ons** are made by email, the **patient's details** and **Laboratory Number** need to be referenced.

### Home visits

This service is available for patients who, for whatever reason, prefer samples to be taken at home or at locations other than a doctor's practice or TDL's Patient Reception at 76 Wimpole Street, London. This is a service that is used regularly to save time for both doctors and patients, and ensures that results can be made available before consultation is undertaken.

There is a visit fee from £150.00 to patients within the M25, and from £250.00 for children when two nurses need to attend. Home visits outside the M25, for weekends, bank holidays and night fees are by special arrangement. To arrange a home visit please telephone Patient Reception on **020 7307 7383** or email **homevisits@tdlpathology.com**.

### Sample packing

Samples need to be packed and transported appropriately for subsequent processing and testing. Transport systems will be various and cover both long and short distances.

Samples need to be collected and packed into appropriate sample containers provided by the laboratory in order to maintain integrity. Attention needs to be given to temperature, special transport containers and time limitations. Each testing has a different sample requirement, which should be referenced prior to sample taking.

Clinics, practices and laboratories who are posting or transporting samples by air, sea, rail and road between local, regional and reference laboratories, or between laboratories in other countries, must adhere to a number of regulations. These regulations are designed to deal with transportation accidents and spills, reduce biohazards and keep samples intact for testing.

Regulations are given by several sources including:

- National transport regulations
- International air transport regulations
- Rail and road traffic agencies
- Postal services

Compliance is mandatory in order to reduce risk to couriers, carrier, laboratory staff and passengers.

Sample transport requirements are based on the category of samples being transported. Infectious substances are classified as Category A (for example a substance that causes viral haemorrhagic fevers) or Category B.

TDL does not arrange for transport of Category A samples (infectious substances capable of causing permanent disability or life-threatening or fatal disease to humans or animals).

Instruction and packaging for Category B is provided, covering Biological Substances, UN3373.

### Packaging requirements

There are specific labelling and triple packaging requirements for Category B samples such that it meets packaging instruction P650:

- Primary receptacle – tube or vial containing the sample which is placed in the secondary packaging.
- Secondary packaging – for example, a protective packaging case or ziplock bag with absorbent material.
- The outer packaging – intended to protect the entire contents.

## Helpful information

- There may also be additional postal envelopes to place the entire package in for postal return. The external surface of the package must be labelled with UN3373 and clearly state BIOLOGICAL SUBSTANCE CATEGORY B.

There are additional packaging requirements for frozen samples requiring shipment using BioFreeze bottles or Dry Ice.

For information please contact the Referrals Dept ([ReferralsOffice@tdlpathology.com](mailto:ReferralsOffice@tdlpathology.com)).

## Postal pathology

Postal pathology services should be considered by all practices in the UK who need a rapid delivery service to the laboratory as it is a quick and efficient method of sample return, which causes little to no disruption to the patient. Royal Mail require that ALL pathology postal packs are sent using Tracked 24 returns. This provides a particularly suitable method of transport for any healthcare organisation. Royal Mail postal pathology with Tracked 24 returns provides:

- Simple and convenient sample handling throughout the UK for most tests. It is not suitable for samples that need to be received within 24 hours of sample taking (e.g. coagulation, Quantiferon TBQ).
- Scope for large and small numbers of samples.
- Next morning delivery.
- Allows patients and practices to track samples to the Distribution Office through the Royal Mail system.
- Samples can be posted from any Royal Mail post box.
- There is a charge of £3.74 for each Royal Mail Tracked 24 pack. This charge will be itemised in monthly invoices to the practice or patient, as requested.

## TDL website

The TDL website gives updated details of our tests – sample types, turnaround times and special instructions. The Specialities section provides a new way to find tests you need, and a Services section has additional information for TDL Collect, Postal Pathology and TestGuide app. Reference Ranges can be requested by emailing [refranges@tdlpathology.com](mailto:refranges@tdlpathology.com). Full details of our tests and profiles are also available in the TDL TestGuide app.

## Helpful information

### DX System

DX is a well known next-day courier of Category B specimens – transporting biological samples in compliance with the industry’s highest regulations. DX is compliant to IATA regulations, is audited independently by Dangerous Goods Safety Advisors. They work with a combination of large health organisations and smaller, independent laboratories to ensure the safe delivery of specimens every year.

TDL’s DX Address is **DX 340201, St Pancras 90 WC.**

### Pathology consumables / Request Forms / Postal packs

TDL Supplies Department provides all appropriate sample collection consumables required for sample collection. Orders will be dispatched on the same or next day and can be made by email to **supplies@tdlpathology.com**. A Supplies Order Form is available from the TDL website.

SCAN ME

Download TDL Request Forms from:

**[www.tdlpathology.com/  
tests/request-forms/](http://www.tdlpathology.com/tests/request-forms/)**

### Requesting and reporting options

We continually review and update our IT Services for receiving requests and reporting results electronically between practices and the laboratory. A number of innovative report formats are now available.

#### Encrypted Email

Results will be sent in encrypted format to any number of predetermined email addresses. Copy reports will be emailed automatically to email addresses on the system.

### Link to Practice Management System

Bidirectional requests and results can be received and delivered electronically using a number of integrated practice systems. Practice software that accepts data in an HL7 format can be linked to securely receive results from the laboratory.

Security of information in TDL systems and processes is managed by our Information Security Management System, which is certified to the latest International Standard for Information Security ISO/IEC 27001:2013.

#### TDL eViewPlus

Provides the most accurate requesting option for clinics who don’t have a practice management system. As well as producing QR coded forms to accompany samples to the laboratory, registered users of this secure Login/Password protected system can request self-collection kits to be sent directly to their patients.

eViewPlus users can also view their results online, with cumulative reporting, anytime, anywhere.

For information about eViewPlus please contact **eviewplus@tdlpathology.com**.

#### Printed Copy

Printed results will only be sent, as standard, if requested.

#### Emailed results incorporating your logo

If a practice or company receives results by email, and would like these to be personalised with the practice’s logo, please email your company details and logo in GIF format to **logo@tdlpathology.com**.

## Helpful information

### Fees for pathology

Fees can be paid directly by patients or by the practice, clinic or requesting organisation. A payment instruction clearly identifying to whom invoices need to be sent must be given with each patient's request.

Patients are normally invoiced within 7 days to the address provided by the patient or practice. Their pathology fees include a standard credit/administration charge.

Receipts for insurance purposes are sent, if requested. Patients visiting Wimpole Street for sample-taking have the opportunity to settle their pathology fees at the time of their visit. A credit/administration fee is raised if invoices are sent to patients. All normal credit, debit or charge cards are accepted and payment can be made by following the telephone payment instructions given with each invoice.

The Terms and Conditions of Business appearing on pages 222-231 of this Laboratory Guide shall apply to the services we provide to you, unless otherwise agreed.

### Protection of personally identifiable information

The General Data Protection (GDPR) and UK Data Protection Act 2018 came in to force in 2018 and have had significant impact upon the way that personal data is managed; placing legal requirements upon data processors and controllers to manage that information securely, maintain records of the processing that is carried out, and report when breaches of the regulation do occur.

This has impacted the way many businesses operate, and is not restricted to the healthcare sector.

### TDL TestGuide app

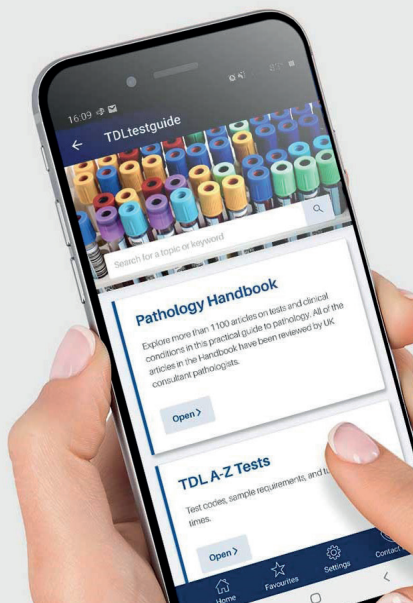

Available for iOS and Android, the TDL TestGuide app offers:

- Full details of TDL's tests and profiles
- The TDL Pathology Handbook, which provides information on more than 1000 pathology topics, reflecting our deep collective knowledge across all areas of pathology

The app can be downloaded from the Apple App Store or Google Play Store. To register for the app, you will just need your TDL Source Code and an email address.

Please contact [testguide@tdlpathology.com](mailto:testguide@tdlpathology.com) if you need help with finding your Source Code.

Feedback for the TestGuide app is always welcome; please send suggestions and comments to [tdl@tdlpathology.com](mailto:tdl@tdlpathology.com).

## Helpful information

At TDL, these requirements have been implemented within the context of a mature ISO 27001 Information Security Management System – the globally accepted standard by which information is secured.

This ensures that senior management have regular visibility of the threats to the confidentiality, availability and integrity of the information that we process, and are able to steer the efforts of their teams to provide an efficient service that places the confidentiality of our customers and their patients at the heart of everything we do.

In order to support our customers compliance with the regulation and as a part of a wider GDPR compliance project TDL has updated its standard terms and conditions to include revised data processing clauses, which are mandatory when providing personal data to another organisation.

Customers can find out more about how TDL protects their data by reading the TDL Privacy Notice at [www.tdlpathology.com/about-us/corporate-information/tdl-group-privacy-notice](http://www.tdlpathology.com/about-us/corporate-information/tdl-group-privacy-notice).

# Quality assurance

**The Doctors Laboratory is committed to providing doctors with pathology of the highest quality.**

The quality of results is of fundamental importance, and the laboratory operates to stringent technical and administrative standards.

Internal quality assurance is achieved by strict adherence to standard operating procedures for all analytical processes. TDL participates in recognised National External Quality Assessment Schemes; these schemes are subscribed to by NHS and private laboratories. The United Kingdom Accreditation Service (UKAS) provides accreditation to the internationally recognised ISO 15189 Medical Laboratories: Requirements for Quality and Competence standard. Results are subjected to strict internal and external quality control.

Details of the laboratories to whom TDL refers specialist testing are available from TDL Referrals. These laboratories are UKAS accredited or of equal accreditation status.

Quality Assurance is administered by TDL's Quality Management Group (QMG), who also adhere to regulatory and accreditation requirements.

## Quality assurance

### MICROBIOLOGY

#### Laboratory Quality Scheme

Aspergillus PCR  
Blood culture and gram stain  
Candida PCR  
*Helicobacter pylori* antigen from faeces  
Mycoplasma PCR  
Polarising crystal microscopy from synovial fluid  
*Streptococcus pyogenes* (Group A)  
detection in pharyngeal samples  
Surveillance for multi drug resistant bacteria

#### UKNEQAS

Antifungal assays  
Antifungal susceptibilities  
*Clostridium difficile* detection and toxin testing  
Cryptococcal antigen  
Faecal parasites  
Fungal culture  
Fungal biomarkers  
General bacteriology  
Genital pathogens  
MRSA screening  
Microbial susceptibilities  
Mycobacterial microscopy  
Mycobacterial culture and molecular detection  
Urinary antigen

#### WEQAS POCT

Urinalysis

#### QCMD

Atypical pneumoniae PCR  
Dermatophyte PCR  
PCP PCR

### IMMUNOLOGY

#### UKNEQAS – General Immunology

Allergen Component Testing  
Allergen Specific IgE Antibodies  
Anti-Phospholipid Antibodies (B2GP)  
Autoimmune Serology ANCA/GBM Antibodies  
Bullous Dermatositis Antibodies  
Coeliac Disease (Endomysium, Tissue transglutaminase)  
Covid 19 Antibodies  
Diabetic Marker (Islet Cell Antibodies)  
Faecal Markers (Calprotectin)  
General Autoimmune Serology  
Hepatitis E (IgG and IgM)  
IGRA (Interferon gamma release assay)  
Intrinsic Factor Antibodies  
Lyme (IgG + IgM)  
Myositis Associated Antibodies  
Nuclear and Related Antigens  
Specific Microbial Antibodies  
Syphilis (THPA and RPR)  
Tryptase

#### UKNEQAS – Infectious Immunology

Anti-Hbs Detection  
CMV IgG/IgM  
Diagnostic Serology Hepatitis  
*Helicobacter pylori* antigen from faeces  
Hepatitis B Serology  
Hepatitis C Serology  
HIV Serology/POCT  
HTLV  
Measles and Mumps Serology  
Parasite Serology  
Parvovirus and Rubella Serology  
Syphilis Serology  
Toxoplasma IgM Serology  
Toxoplasma IgG Serology

## Quality assurance

### RCPAQAP Scheme

Chlamydia Serology  
Legionella (IgG) Serology  
Striated Muscle Antibodies

### INSTAND Scheme

Adrenal Antibodies  
HDV Serology and Functional Complement  
Hepatitis E Serology

### CSCQ Scheme

Lyme Borrelia Serology

### Laboratory Quality Scheme

Antistreptolysin O Titre  
Cytomegalovirus Antibodies  
EBV Serology  
Euroimmun ifQ-Lubeck (Liver)  
Autoimmune Disease Scheme  
*Helicobacter Pylori* IgG Antibodies  
Herpes Simplex 1 & 2 Antibodies  
Measles Serology  
Mumps Serology  
Mycoplasma Serology  
RNA Polymerase III  
VZV Serology

## ENDOCRINOLOGY

### UKNEQAS

AFP / CEA  
Allergens Scheme  
Peptide Schemes 1 to 4  
Prostate Specific Antigen  
PTH  
SHBG  
Specific IgE/Total IgE  
Steroid Hormones  
Thyroid Scheme  
Tumour Markers

## CERVICAL SCREENING

### NHS England

Gynaecological Cytopathology EQA Scheme (GEQA)  
National EQA Scheme for the Preparation and Staining  
of Cervical Liquid Based Cytology Samples (TEQA)

### HOLOGIC EQA scheme for

ThinPrep Stain

### UKNEQAS for Microbiology

Molecular Detection of HPV

## DIAGNOSTIC CYTOLOGY

### UKNEQAS for CPT

Stained Non-Gynaecological Cytology Module.

All non-gynaecological (diagnostic cytology),  
including Urine Cytology, are referred to a  
UKAS accredited laboratory for reporting.

## ANDROLOGY

### UKNEQAS

Semen Analysis Scheme

## INFORMATION SECURITY

## Measurement Uncertainty

Medical laboratories are responsible for ensuring that test results are fit for clinical application by defining analytical performance goals, selecting and qualifying appropriate measurement procedures. All measurement results have some inaccuracies due to analytical bias and imprecision; therefore a measurement result is an estimate at the time of undertaking such measurements. To properly use such results, medical laboratories and their clinical users need some knowledge of the accuracy of such estimates and the uncertainty it may have on the interpretation of patient results.

This estimate of such uncertainties is referred to as Measurement Uncertainty (MU) which incorporates the cumulative range of factors involved in the examination procedure, which may potentially influence the overall test result and thus the interpretation of patient results.

The complete result of a measurement is a value, a unit and an estimate of uncertainty.

Medical laboratories consider the impact of such uncertainties on the interpretation of patient results and ensure uncertainties are minimised through control measures such as standardised procedures, Internal Quality Control monitoring and trending and routine evaluation of MU. Evaluating measurement uncertainty is an ISO 15189:2022 accreditation requirement.

It should be noted that all assays within the TDL/HSL group of laboratories use standard operating procedures followed by trained and competency assessed scientists.

The MU is initially estimated for each assay during the qualification of the selected examination procedure and is evaluated against the pre-defined maximum allowable measurement uncertainty. Each MU is then re-estimated at regular intervals with additional data and reviewed against the pre-defined maximum allowable measurement uncertainty to ensure uncertainty values and therefore errors and inaccuracies are minimised.

## Quality assurance

Overall assay performance is also regularly monitored through internal quality control (IQC) and external quality assessment (EQA) schemes and incorporated in test result interpretation. MU for individual assays is available upon request.

## Sample rejection criteria

Sometimes tests cannot be performed in the laboratory if samples fall short of the quality, volume or other eligibility criteria such as clear sample labelling. In these cases, the potential risk to the patient management is that the laboratory may need to reject the samples, and not carry out processing. Sometimes the laboratory can rectify a situation where a sample falls short of the sample acceptance criteria though in this case the risk to the patient management may be a breach of stated turnaround time and a delay to provision of the result. In order to reduce the risk of sample rejection or delay to provision of results, please ensure all sample taking criteria are met.

### Summary list for sample rejection

- Incorrect sample types received:
  - Basic incorrect blood tube/other sample.
  - Samples without the appropriate preservative (e.g. acidified urine samples).
  - Samples that are received ambient, when a frozen sample is required.
  - Samples that are received unprotected from light, when they are required to be covered at the point of venepuncture.
- Samples in incorrect containers (e.g. cervical cytology must be a ThinPrep vial; urine cytology must be in a uricite container).
- Insufficient sample received.
- No sample received.
- Labelling or form issues (mislabeled/unlabelled/no forms/no clinical information).
- Clotted/haemolysed/lipaemic/icteric samples.
- Sample is broken or has leaked in transit.

- Stability time has been exceeded. Stability time is test dependant, and also refers to tests that can only be carried out on certain days of the week.
- Sample contamination (e.g. being in the same bag as a leaking sample).
- Samples are high risk or infectious.
- Samples that are received in expired tubes.
- Discontinued tests.

### Department specific

- Sample Reception will not accept samples packaged with needles of any kind.
- Haematology cannot accept frozen whole blood for testing.
- Coagulation cannot accept over or under filled samples for testing.
- Coagulation cannot accept previously frozen samples that have thawed in transit.
- Biochemistry cannot accept previously frozen samples that have thawed in transit.
- Biochemistry cannot accept samples that display antibody interference.
- Biochemistry cannot accept samples that have had separation delays/un-centrifuged samples that have been stored in the fridge.
- Biochemistry cannot accept paraprotein resulting in viscous samples.
- Biochemistry cannot accept CSF protein that is blood stained.
- Immunology cannot accept TBQ kits that:
  - Do not contain all of the appropriate tubes.
  - Are incubated for more than the specified 16 hours.
  - Have passed the incubation time period.
  - Are over or under filled.
- Microbiology cannot accept samples in non-sterile containers or in formalin.
- Referrals cannot accept samples without three points of identification for DRP testing.

## Quality assurance

- Referrals cannot accept samples that are not labelled by hand for blood group testing.
- Molecular Pathology cannot accept samples for Haemophilia testing without informed consent.
- Cervical Cytology cannot accept over or under filled samples for testing.
- Cervical Cytology cannot accept samples received within three months of the previous test in order to allow epithelial cells to regenerate.
- Cervical Cytology cannot accept samples containing a sample broom.

- Cervical Cytology can only accept samples received in a Hologic ThinPrep Vial.
- Cervical cytology cannot accept samples received in an expired ThinPrep Vial.
- Urine cytology cannot accept delayed samples unless they have been refrigerated.

Samples deemed to be unrepeatable (e.g. CSF, fluid, tissue, bone marrow and paediatric samples) will not be discarded by the laboratory. Results will include a comment relating to the condition of the sample (e.g. sample unlabelled).

## Quality assurance

## Consultant advice and opinion

Each department in the laboratory is consultant led. The TDL Consultants listed below have defined advice or professional support, TDL consultants can be contacted via the laboratory.

### TDL Lead Consultants

#### Chief Medical Officer

##### Dr Rachael Liebmann OBE

BSc Hons, MB, BCh, BAO, FRCPath,

# Special instructions for samples

- 1 Contact the laboratory for special sample tubes/containers/instructions.
- 2 Confirmation of not negative drug screens by LCMS/MS may take up to 5 days.
- 3 Clinical history essential and protect from light.
- 4 Send to the laboratory same day.
- 5 Do not send sample to the laboratory between Friday noon and Monday morning.
- 6 Contact the Referrals Department before taking and sending sample to the laboratory.
- 7 Sample should be separated and frozen if sending overnight.
- 8 DRP Form required. DRP Form can be found at the back of the guide.
- 9 Clinical history must be provided.
- 10 Contact the laboratory for special stability tubes for lymphocyte subsets – or take an EDTA sample and ensure same day delivery to the laboratory, Monday to Friday noon (do not send sample between Friday noon and Monday morning).
- 11 Patient consent required. Consent Form can be found at the back of the guide.
- 12 Please provide one sample for each person being tested.
- 13 Protect from light.
- 14 Provide details of travel history.
- 15 Ammonia  
Sample: EDTA plasma only. Full tubes and tightly stoppered. On ice, centrifuged and analysed 20-30 mins post venepuncture (or plasma can be frozen). If haemolysed gives falsely high results.  
Patient: Fasting. Avoid smoking.
- 16 Lactate  
Sample: Fluoride oxalate plasma only.  
On ice and separate from cells within 15 mins, analyse promptly. Handle with care as sweat contains large amounts of lactate. No tourniquet.  
Patient: Rest 30 mins prior to test.
- 17 Homocysteine  
Should be spun and separated within 1 hour of venepuncture.
- 18 Citrate Samples  
Samples should be double spun and separated and frozen within 4-8 hours of sample taking, if a delay is expected with transportation to the laboratory, samples must be transported as frozen.
- 19 Must include patient's age, height and weight.
- 21 Urine cytology container, ideally first catch, mid-morning specimen.
- 22 Must be fresh.
- 30 Collect sample at end of exposure.
- 33 Sample must be labelled by hand with first name, family name, gender and date of birth detailed on sample and form. Do not use labels other than the tube label.
- 34 Samples must arrive in the laboratory on the same day of sample taking or contact the laboratory.
- 35 Patient should be fasting and resting for 30 mins before sample taking.  
Samples need handling urgently.
- 36 Renin: Sample collected either upright/active or resting/supine (3 hours lying). EDTA Plasma must be frozen within 2 hours.
- 37 Provide sample time and date of collection.
- 38 EDTA sample should not be separated:  
send whole blood.
- 40 Informed Consent is required for these tests.
- 41 Recommendation for patient to attend Patient Reception for sample taking.
- 42 LGV can be added to a positive chlamydia sample using the same swab if requested within 4 days of receipt of result.
- 43 Please contact [lisa.levett@tdlpathology.com](mailto:lisa.levett@tdlpathology.com) for details for referring samples to the laboratory for sequencing testing.

## Profile panel information

Profile name	<b>Coagulation Profile 1</b>	
Profile content	Prothrombin Time APTT Fibrinogen	
Turnaround time	<b>TAT: 1 day</b>	
Code	<b>CLPF</b>	<b>£83.50</b>
Sample requirements	 18	Special instructions for samples (see above)

# TDL Screening Profiles DL1-DL12

## DL1 Biochemistry Profile

### CHANGE

**Urea and Electrolytes:** Sodium, Potassium, Chloride, Bicarbonate, Urea, Creatinine, eGFR

### Liver Function Tests:

Bilirubin, Alkaline Phosphatase, AST, ALT, Gamma GT, Protein Total, Albumin, Globulin

### Bone Markers:

Calcium, Phosphate, Uric Acid, Magnesium

Glucose

Triglycerides

Cholesterol

Iron (TIBC included)

**TAT: 1 day**

DL1 £50.00\*

DL1L £55.00\*

plus HDL, LDL (Calculated) and Non-HDL Cholesterol

**B G**

## DL5 Biochemistry & Haematology Postal Profile

### CHANGE

AS DL4

**DL5/DL5L do not include ESR and Phosphate as these results may be more affected by overnight transit times.**

**TAT: 1 day**

DL5 £60.00\*

DL5L £65.00\*

plus HDL, LDL (Calculated) and Non-HDL Cholesterol

**A B G**

## DL2 Biochemistry (24 Parameters) & Haematology Profile

### CHANGE

### HAEMATOLOGY

Full Blood Count (FBC), ESR

### BIOCHEMISTRY

**Urea and Electrolytes:** Sodium, Potassium, Chloride, Bicarbonate, Urea, Creatinine, eGFR

### Liver Function Tests:

Bilirubin, Alkaline Phosphatase, AST, ALT, Gamma GT, Protein Total, Albumin, Globulin

### Bone Markers:

Calcium, Phosphate, Uric Acid, Magnesium

Glucose

Triglycerides

Cholesterol

Iron (TIBC included)

**TAT: 1 day**

DL2 £65.00\*

DL2L £70.00\*

plus HDL, LDL (Calculated) and Non-HDL Cholesterol

**A B G**

## DL6 General Well Person Profile

### CHANGE

DL2 HbA1c  
Free T4 / TSH Ferritin

**TAT: 1 day**

DL6 £130.00\*

DL6L £135.00\*

plus HDL, LDL (Calculated) and Non-HDL Cholesterol

**A B G**

## DL3 Haematology Profile

Full Blood Count (FBC)  
ESR

**TAT: 1 day**

DL3 £32.00\*

**A**

## DL4 Biochemistry (16 Parameters) & Haematology Profile

### CHANGE

### HAEMATOLOGY

Full Blood Count (FBC), ESR

### BIOCHEMISTRY

### Renal Function:

Urea, Creatinine, eGFR

### Liver Function Tests:

Bilirubin, Alkaline Phosphatase, AST, ALT, Gamma GT, Protein Total, Albumin, Globulin

### Bone Markers:

Calcium, Phosphate, Uric Acid, Magnesium

Glucose

Triglycerides

Cholesterol

**TAT: 1 day**

DL4 £60.00\*

DL4L £65.00\*

plus HDL, LDL (Calculated) and Non-HDL Cholesterol

**A B G**

\*All DL Profiles are priced showing fees to doctor.

## TDL Screening Profiles DL1-DL12

### DL7 Well Man Profile

<b>CHANGE</b>	Ferritin
DL2	HbA1c
Free T4 / TSH	Prostate Profile

#### TAT: 1 day

**DL7** £160.00\*

**DL7L** £165.00\*  
plus HDL, LDL (Calculated)  
and Non-HDL Cholesterol

**A B G**

### DL8 Well Person Profile

<b>CHANGE</b>	Ferritin
DL2	HbA1c
Free T4 / TSH	Vitamin D (25-OH)

#### TAT: 1 day

**DL8** £160.00\*

**DL8L** £165.00\*  
plus HDL, LDL (Calculated)  
and Non-HDL Cholesterol

**A B G**

### DL9M Senior Male Profile 60+

<b>CHANGE</b>
DL2
HDL/LDL Cholesterol
Free T4 / TSH
HbA1c
Prostate Profile
C Reactive Protein (CRP)
C Reactive Protein (High Sensitivity)
Ferritin
MSU
Vitamin D (25-OH)
Lp-PLA2 (PLAC) Test

#### TAT: 2 days

**DL9M** £380.00\*

**A B B G RU<sup>4</sup>**

### DL10 Cardiovascular Risk Profile 1

Lipid Profile (Cholesterol, Triglycerides, HDL Cholesterol, LDL Cholesterol, Non-HDL Cholesterol)
Apolipoprotein A1
Apolipoprotein B
Lipoprotein (a)
C Reactive Protein (High Sensitivity)

C Reactive Protein (CRP)
C Reactive Protein (High Sensitivity)
Ferritin
MSU
Vitamin D (25-OH)
HE4
Lp-PLA2 (PLAC) Test

#### TAT: 2 days

**DL9F** £390.00\*

**A B B G RU<sup>4</sup>**

### DL11 Cardiovascular Risk Profile 2

Lipid Profile (Cholesterol, Triglycerides, HDL Cholesterol, LDL Cholesterol (Calculated), Non-HDL Cholesterol)
Apolipoprotein A1
Apolipoprotein B
Lipoprotein (a)
Fibrinogen
C Reactive Protein (High Sensitivity)
Lp-PLA2 (PLAC) Test
Homocysteine (Quantitative)

#### TAT: 3 days

**DL11** £320.00\*

**B B B C<sup>34</sup>**

\*All DL Profiles are priced showing fees to doctor.

### DL12 7 STI Profile by PCR (7 PCR Tests from 1 Sample)

Chlamydia trachomatis	Neisseria gonorrhoea
Mycoplasma genitalium	Ureaplasma species
Trichomonas vaginalis	Gardnerella vaginalis
Herpes Simplex I/II	

**All tests can be requested individually**

#### TAT: 2 days

**DL12** £140.00\*

### FCRU / PCR Swab / TPV

Turnaround times are from the point at which samples are entered into TDL's laboratory information management systems, and provide a guide for the issue of results. Some tests are run in laboratory departments that do not operate at weekends.

## Stockholm3 test for early detection of Prostate Cancer

Stockholm3 is a blood test that helps to predict risk of clinically significant prostate cancer in men aged 45–74 years with a PSA level greater than 1.5 ng/ml where no previous diagnosis of prostate cancer has been made. Stockholm3 combines genetic markers, proteins and clinical data in an algorithm to help identify clinically significant prostate cancer. It allows for screening in primary or secondary care settings and is equivalent across diverse ethnicities. Apart from a strong health economic case, the result from a Stockholm3 test can be used to reduce unnecessary imaging or invasive diagnostic procedures.

### Key characteristics of Stockholm3

- Increased early detection – increased sensitivity
- Increased specificity reduces over testing, unnecessary biopsies by 50% and treatment
- Higher accuracy compared to PSA, PSAD and prostate cancer risk calculator
- Can distinguish between aggressive and benign tumours in a way that PSA testing cannot
- Validated in combination with MRI and in multiple ethnicities
- Shown to detect clinically significant prostate cancers in PSA levels of 1.5–2.9 ng/ml
- Reduces healthcare costs

### Stockholm3: diagnostic patient pathway, including STKR (reflex testing to STK3 from PSA with results of >1.5)

<b>Gender</b>	Male
<b>Intended age</b>	45–74 years, not had prostate cancer, PSA > 1.5 ng/ml
<b>Clinical data required</b>	Age, family history of prostate cancer, previous biopsies, use of 5-alpha reductase inhibitors (Avodart [Dutasteride] or Proscar [Finasteride]).
<b>Test code STK3</b>	2 x EDTA tubes must be received within 24–36 hours of sample taking. TAT up to 2 weeks
<b>Test code STKR</b>	PSA levels of >1.5 combined with reflex testing to STK3. 1 x SST, 2 x EDTA tubes must be received within 24–36 hours of sample taking. TAT up to 2 weeks.

**A Stockholm3 risk score of >11 is considered to be an indicator of clinically significant prostate cancer risk and referral to a urologist for further investigation is recommended.**

For further information about the test please contact [stockholm3@tdlpathology.com](mailto:stockholm3@tdlpathology.com). Don't post samples to TDL as the timing for receipt of samples within 24–36 hours is important.

See page 106 for test information.

## TDL eViewPlus

Provides the most accurate requesting option for clinics who don't have a practice management system. As well as producing QR coded forms to accompany samples to the laboratory, registered users of this secure Login/Password protected system can request self-collection kits to be sent directly to their patients.

eViewPlus users can also view their results online, with cumulative reporting, anytime, anywhere.

For information about eViewPlus please contact **[eviewplus@tdlpathology.com](mailto:eviewplus@tdlpathology.com)**.

## Urine culture processing and results

All urine culture testing is performed using manual methods. The culture pathway adheres to national guidance and is a fully UKAS-accredited method.

Manual testing allows a larger amount of urine to be tested than previous automated method, which enables the laboratory to detect lower bacterial counts (as low as 103 cfu/mL) and also facilitates the follow up of significant organisms grown from mixed cultures.

If the culture result is indicative of urinary tract infection, antibiotic susceptibilities will be tested from the culture growth and will be available 24 hours after the culture result. 'Direct sensitivities' are no longer performed. Direct susceptibility testing is not inoculum-controlled, produces inaccurate results and is not UKAS-accredited.

Culture results should be interpreted alongside the microscopy WBC count and clinical signs and symptoms. Significant growth on culture in the absence of pyuria may be suggestive of contamination with regional flora rather than true infection. It should be noted, however, that WBC degrade in urine quite rapidly and delays between sample collection and microscopy may lead to falsely low WBC readings which may account for these findings.

### What does the result 'No significant growth' mean?

The amount of growth falls below the threshold for urinary tract infection (< 103 cfu/mL). There is no laboratory evidence of urinary tract infection. Occasionally, this may be seen in very early stages of infection or in a partially treated urinary tract infection. Therefore, please send a repeat specimen if symptoms persist.

### What does the result 'mixed growth doubtful significance' mean?

This means that the culture revealed a heavy growth of at least 3 organisms with no predominating organism; this represents contamination of the urine with the patient's flora during collection.

This result does not exclude urinary tract infection but it is not possible to determine the causative organism among the mixture of organisms.

If symptoms persist, please send a repeat urine specimen and ensure that patient understands optimal collection technique.

If you are receiving a lot of 'mixed growth of doubtful significance' results, please consider the following:

## Infection Sciences

### ■ The instructions that patients are given to collect their urine sample

Poor collection technique is the most common reason for a heavily mixed growth in a urine sample. It is almost impossible to collect a urine sample without any contamination from the normal bacterial flora which inhabits the area surrounding the urethral opening, but optimal collection technique will minimise this contamination and allow the true infective cause to stand out and be identified (a patient instruction leaflet is available).

### ■ Delays between sample collection and laboratory processing

The time between sample collection and laboratory processing can allow small amounts of contaminating bacterial flora to multiply up to higher amounts prior to laboratory testing, which can result in heavy mixed growth of bacteria on culture. Using a red topped specimen pot containing boric acid preservative will minimise this.

If, despite these measures, a patient has recurrent mixed growth reports from multiple urines, it may suggest that your patient has abnormal urinary tract architecture, immunosuppression or other non-infective cause that requires different laboratory investigations or referral to a specialist. If further information is required, please telephone the laboratory and ask to discuss the case with one of our consultant Microbiologists.

## Red topped boric acid containers

The preservative reduces the overgrowth of organisms and, to a lesser extent, reduces the degradation of white cells during transit leading to a more accurate laboratory result for both microscopy and culture. UKAS recommends the use of boric acid containers for all urine sample for microscopy and culture (Urine M,C&S) to improve the quality of microbiological results.

### Red topped boric acid containers are for requests for urine microscopy and culture (MC&S) ONLY. Boric acid container should NOT be used for:

- Other urine microbiology tests (e.g. investigations for Chlamydia, Mycobacterium, Schistosomiasis, urinary antigen testing)
- Urine samples being analysed by PCR methodology
- Urine samples for non-microbiology tests (e.g. biochemistry, virology, pregnancy testing)
- Very small urine volumes (<20ml) e.g. neonates

Use of urinary dipsticks: boric acid may inhibit leukocyte esterase dipstick readings; dipstick testing performed on a sample in a boric acid container should be interpreted with caution.

If additional tests are required in addition to urine microscopy and culture, an additional sample in a white-topped universal container should be sent. In this case, it is advised that the mid-stream clean catch urine is collected in a sterile bowl and then transferred to the necessary specimen containers.

### Group B Streptococcus (GBS)

Group B Streptococcus (GBS or group B Strep) is the most common cause of severe infection in newborn babies, and of meningitis in babies under age 3 months. On average in the UK:

- 2 babies a day develop group B Strep infection
- 1 baby a week dies from group B Strep infection
- 1 baby a week survives group B Strep infection with long term disability

Most GBS infection is of early onset, presenting in babies within the first 6 days of life, and usually within the first 12 hours after birth. Between age 7 days and 3 months, these infections are rare, and in babies over 3 months they are very rare indeed.

Most early-onset GBS infections (in babies aged 0-6 days) can be prevented by giving intravenous antibiotics in labour to women whose babies are at raised risk of developing GBS infection. In the UK, women are offered IV antibiotics in labour based on specific risk factors.

GBS is normal flora of the distal GI tract. Up to 30% of women carry it harmlessly in their vaginal tract. Vaginal carriage at the time of vaginal delivery can result in transmission of GBS to baby. Babies are more vulnerable to infection as their immature immune systems cannot fight off the multiplying bacteria. If untreated, GBS can cause serious infections, such as meningitis and septicaemia, which may lead to stillbirths, and newborn and infant deaths. If they survive, babies can develop permanent problems including hearing or vision loss, or cerebral palsy.

Current GBS prevention focuses on giving intravenous antibiotics to women in labour, aiming to reduce disease in infants at delivery. 2 x **Blue culture swabs** (lower vaginal and lower rectal) should ideally be taken from 35 weeks. Swabs will be placed in enrichment culture in the microbiology laboratory to ensure maximal detection.

### Swabs: Types and Codes

**Patient Request Forms** and **Swabs** must be labelled with the body site from which the sample was taken. **This is important.** The swab site determines the appropriate culture media required to target the most likely pathogens.

#### Culture Swabs

SITE	CODE	SAMPLE TYPE
<b>Candida only swab</b>	CANC	<b>Black</b> or <b>Blue</b> Micro Swab

## PCR methods for the detection of Dermatophyte Fungal Cultures

The detection of Dermatophyte fungal cultures uses High Sensitivity PCR testing. This reduces the overall turnaround time by up to three weeks, and increases the detection of fungal infection compared to combined microscopy and culture. Furthermore the specific targeting pathogens associated with superficial fungal infection is increased which assists in preventing the over reporting of insignificant fungi that are contaminants.

### Fungal test codes

	Investigation of Superficial Fungal Infection	Investigation of Non-Superficial Fungal Infection
<b>Test code</b>	DERM*	FUN*
<b>Sample type</b>	Skin, Hair and Nail.	All specimens other than Skin, Hair and Nail.
<b>Turnaround time</b>	72 hours for interim PCR report, and 7 days for final culture (unless the fungal culture needs to be extended for significant growth).	7 days (non-sterile e.g. ear swab) and 3 weeks (sterile i.e. CSF).
<b>Notes</b>	<ul style="list-style-type: none"> <li>• Dermatophyte PCR has replaced microscopy for Skin, Hair and Nail (72 Hour TAT).</li> <li>• Non-dermatophyte culture will take 7 days.</li> <li>• Microscopy is carried out to confirm significance of rare fungi.</li> <li>• Pseudomonas investigation in Nail specimens is available on request.</li> </ul>	<ul style="list-style-type: none"> <li>• Non-sterile specimen fungal cultures are performed on Sabouraud's agar plates for 7 days with no microscopy.</li> <li>• Sterile specimen fungal cultures have microscopy (Calcafluor) reported on the day of processing and culture on a Sabouraud's agar slope, incubated for 21 days.</li> </ul>

### Stool test codes

Traditional culture methods have been replaced by Real Time PCR for enteric pathogen testing. The benefits are increased sensitivity and a higher detection rate. Once received and processed in the microbiology lab, negative results will be available within 24 hours. Positive results will be followed up with culture and sensitivities for final reporting.

### Stool OCP and Culture

Sample type	Comments
<b>Stool</b> Please request as <b>PENT</b> Serosep EntericBio PCR <b>Bacteria/Bacterial Toxins</b> <ul style="list-style-type: none"> <li>• Salmonella • Campylobacter</li> <li>• Shigella • VTEC</li> </ul> <b>Parasites</b> <ul style="list-style-type: none"> <li>• Cryptosporidium • Giardia</li> </ul>	All stool samples will be tested for UK Pathogens. Overseas pathogens will only be tested if specifically requested and travel history and clinical details are provided. Samples that are positive for the bacterial pathogens will be cultured to provide sensitivities and, if indicated, for PHE referral. Samples will be kept for 7 days after receipt to allow for additional testing if required.

Turnaround times are from the point at which samples are entered into TDL's laboratory information management systems, and provide a guide for the issue of results. Some tests are run in laboratory departments that do not operate at weekends.

### Stool for OCP

Sample type		Comments
<b>Stool</b>	Please request as <b>MOCP</b> Requests for MOCP only will include testing for cryptosporidium and giardia by PCR	Overseas pathogens will only be tested if requested and travel history and clinical details are provided.

### *C. Difficile* detection

Sample type		Comments
<b>Stool</b>	Please request as <b>CLOS</b> Serosep Enteric Bio PCR Alere Techlab EIA (Toxin)	Two tier PCR and Toxin c.diff screening based on PHE guidance.

### Enteric Organism Rapid Detection – see Tropical Immunology page 93

# Endocrinology

TEST	CODE	SAMPLE REQS	TAT	PRICE
<b>11 Deoxycorticosterone</b>	DEOX	<b>B</b>	10 days	£128.50
<b>11 Deoxycortisol</b>	11DC	<b>B</b> (Frozen)	10 days	£195.00
<b>17 Hydroxyprogesterone</b>	17OH	<b>B</b>	5 days	£120.00
<b>ACTH (Adrenocorticotrophic Hormone)</b>	ACTH	<b>A</b> (EDTA on ice, Plasma, spun and frozen within 2 hours) <sup>41</sup>	1 day	£140.00
<b>Aldosterone</b>	ALDN	<b>A</b> or <b>B</b>	5 days	£138.00
<b>Aldosterone (Urine)</b>	UALD	<b>PU</b>	5 days	£140.00
<b>Alpha-Fetoprotein</b>	AFP	<b>B</b>	1 day	£60.00
<b>Amenorrhoea Profile (LH, FSH, PROL, TEST, TOES, SHBG, FAI) (Self-collect) CHANGE</b>	TAME	<b>F</b> (TDL Tiny)	1 day	£150.00
LH, FSH, PROL, TEST, TOES and SHBG now also available individually from a <b>F</b> (TDL Tiny) sample. Avoid taking samples from any area an HRT cream is applied.				
<b>Amenorrhoea Profile (Venous)</b>	AMEN	<b>B</b>	1 day	£150.00
<b>Andropause Profile</b>	ANDP	<b>B</b> <b>B</b>	1 day	£185.00
<b>Androstenedione</b>	ANDR	<b>B</b>	5 days	£94.50
<b>Antidiuretic Hormone</b>	ADH	<b>A</b> <b>A</b> (Plasma Frozen) <sup>4</sup>	10 days	£163.50
<b>Antimullerian Hormone (AMH) (Self-collect)</b>	AMH	<b>B</b> (TDL Tiny) or <b>F</b> (TDL Tiny)	1 day	£130.50
<b>Antimullerian Hormone (AMH) (Venous)</b>	AMH	<b>B</b>	1 day	£130.50
Samples can be taken, at any time during a patient's monthly cycle. Ambient, unspun sample stability has been validated for up to 5 days (Venous).				
<b>BNP (NT-pro BNP)</b>	BNP	<b>B</b>	1 day	£94.50
<b>C Peptide</b>	CPEP	<b>B</b>	3 days	£134.00
<b>Calcitonin</b>	CATO	<b>B</b> (Frozen) <sup>4</sup>	1 day	£139.00
<b>Catecholamines (Plasma)</b>	CATE	<b>A</b> <b>A</b> (Plasma Frozen) <sup>4</sup>	5 days	£124.00
<b>Catecholamines (Urine)</b>	UCAT	<b>PU</b> (collect on acid) <sup>1</sup>	5 days	£157.50

## Endocrinology

### Ziwig Endotest®

Ziwig Endotest® is a new non-invasive diagnostic test for reliable and rapid diagnosis for all types of endometriosis. The test relies on Next Generation Sequencing of micro RNA present in saliva and on the use of Artificial Intelligence to process the very large volume of data generated. Ziwig Endotest® is an in vitro diagnostic test for diagnosis of endometriosis on salivary samples with sensitivity 97.4% and specificity 93.7%.

About 10% of all women are affected by endometriosis with average times for diagnosis of around 9 years. Patients not infrequently see up to 10 doctors before being diagnosed with endometriosis (MRI, pelvic ultrasound, laparoscopy). Ziwig Endotest® is able to detect all types of endometriosis, mild and advanced. Endometriosis is not infrequently mistaken for other conditions that can cause pelvic pain, such as pelvic inflammatory disease (PID) or ovarian cysts. The effects of endometriosis range from asymptomatic, often identified during investigations for infertility, to chronic or progressively severe symptomatic related conditions. Once diagnosed, optimised clinical management of endometriosis would apply.

Laparoscopy is the gold standard for diagnosis of endometriosis but is relatively expensive, invasive, and requires an anaesthetic. The saliva sample required for the test is straight forward to collect, non-invasive and provides a definitive diagnosis even in the most complex cases. It has been validated by one of the largest clinical studies in the world.

Ziwig Endotest® provides a Bioinformatics Approach to microRNA sequencing analysis, from saliva.

For access to scientific publications visit: [ziwig.com/en/our-publications/](http://ziwig.com/en/our-publications/)

- Clear Positive/Negative result
- Definitive diagnosis for all forms of endometriosis
- Non-invasive, saliva sample
- Cost contained single test outcome

For information about this test and to order kits please contact [endotest@tdlpathology.com](mailto:endotest@tdlpathology.com)

The quality of the saliva sample collection is important. Samples can be collected under supervision of a referring clinician or self-collected at home following the instruction video:

[www.tdlpathology.com/ziwig-endotest](http://www.tdlpathology.com/ziwig-endotest)

The advertisement features a smiling woman with dark hair against a teal background. To her left is a diagram with three circular icons: a female symbol, a DNA double helix, and a document with a checklist. Below the diagram is the Ziwig logo and the text 'Ziwig Endotest®'. At the bottom left, it reads 'A saliva test for the early and reliable diagnosis of endometriosis'.

**LC MS Mass Spec**  
**Total Testosterone NEW**

Testosterone must be the world's most discussed hormone, but general understanding about testing is much less well known. Immunoassay methods are widely used to measure testosterone, providing a reliable method of measurement in many use cases. However, whilst this is accepted for standard testing, this methodology carries a possibility of analytical interference and cross-reactivity with structurally similar biological compounds, which can lead to a false, overestimation of circulating testosterone concentration.

Measurement of total testosterone by tandem mass spectrometry (LC-MS/MS) is a methodology with greater specificity, providing a more accurate measurement of testosterone, important when assessing lower levels of testosterone found in females, children and hypogonadal males.

The British Menopause Society recommends LC-MS/MS for the measurement of total testosterone levels, both to exclude high baseline concentrations before treatment is commenced and to ensure that levels remain within the female physiological range when monitoring supplementation (<https://thebms.org.uk/wp-content/uploads/2022/12/08-BMS-TfC-Testosterone-replacement-in-menopause-DEC2022-A.pdf>)

See page 60 for test information.

<b>Female Reference Ranges</b>		0.7–2.8 nmol/L (normal)
		0–0.7 (low)
<b>Male Reference Ranges</b>	15 years	0.9–2.7 nmol/L
	15–49 years	9.2–55.8 nmol/L
	50+ years	6.3–26.5 nmol/L

# TDL Andrology

The single most important factor determining a man's fertility potential is the production of healthy sperm. A semen analysis has classically been used as the marker of this potential, by providing information about the sperm count, motility and morphology. However, there are other parameters given in a semen analysis that are often neglected or overlooked, which may indicate important pathologies – such as infection, prostatic disease, immunological infertility, retrograde ejaculation, malformation or obstruction of the genital tract, tumour, and congenital or endocrine disorders.

Early diagnosis of the male factor is important in order to detect any underlying pathology, determine the extent of infertility and ensure appropriate treatment. It may also avoid unnecessary investigations for the female partner, particularly if her age is a limiting factor.

For men who have had a vasectomy, clearance should only be given when there is no evidence of presence of sperm in two consecutive semen samples. It is therefore vital to ensure that results are reported according to best practice guidelines. Special clearance may be given at the doctor's discretion when there are persistent non-motile sperm present.

## Guidelines for Producing Samples

Ideally semen samples should be produced on-site at TDL's Patient Reception at 76 Wimpole Street. Ideally patients must abstain from ejaculation for 2-3 days prior to the test, generally no less than 2 days and no longer than 7 days before the test is acceptable. This requirement is important for semen analyses and post vasectomy analyses to ensure reliability of results. It is possible that samples that do not comply with guidelines for abstinence and collection may not be able to be processed. For other semen tests like ROS and DNA fragmentation the abstinence period is minimum 2 days but no more than 3 days. All semen samples must be produced directly into the sterile containers provided by The Doctors Laboratory.

All containers are weighed and batch tested for sperm cytotoxicity. In exceptional circumstances when semen samples are produced off-site, they can only be accepted by the Andrology Department in sample containers provided by TDL.

TDL Andrology provides reference values to those given in the most recent WHO guidelines (2021). WHO 2021 guidelines state that two semen analyses should be performed before any diagnosis is confirmed. This may require requests for two (separate) semen analyses.

## Appointments

**It is important to make an appointment for all semen samples (on or off site) whether for a comprehensive semen analysis or post vasectomy analysis.** It may be necessary to give patients who attend without an appointment a specific time to re-attend. The first appointments for post vasectomy samples should usually be 12 weeks and 20 ejaculations after surgery.

Appointments can be made online at [www.tdlpathology.com/andrologybooking](http://www.tdlpathology.com/andrologybooking) or by calling **020 7025 7940**. There is an attendance fee of £50.00 in addition to pathology charges.

Please complete a Pathology Request Form for your patient. If you would like to request other pathology, you can use the same form or complete a second additional form. Results will usually be reported to you within 48 hours.

If you would like to discuss these tests, or any aspect of this service including clinical interpretation by the consultant please contact TDL Andrology on **020 7025 7940** or email [andrology@tdlpathology.com](mailto:andrology@tdlpathology.com) for further information.

## TDL Andrology

TEST	CODE	SAMPLE REQ	TAT	PRICE
<b>Individual Semen Parameters***</b>	SPOD	<b>Semen</b> <sup>1</sup>	1 day	£80.00
*** Semen parameters may be requested individually (e.g. count only, vitality only, motility etc.). Please request as SPOD and indicate on the request form which parameter is required.				
<b>Oxidative Stress in Semen (ROS + MIOXSYS)</b>	SROS	<b>Semen</b> <sup>1</sup>	1 day	£255.00
<b>Retrograde Ejaculation</b>	RTR0	Contact lab	2 days	£98.50
<b>Semen Analysis, Comprehensive*</b>	SPER	<b>Semen</b> <sup>1</sup>	2 days*	£220.50
* If required, comprehensive semen analysis can be reported within 4 hours, with morphology to follow.				
<b>Semen Analysis, Post-Vasectomy**</b>	PVAS	<b>Semen</b> <sup>1</sup>	2 days	£120.00
** For men who have had a vasectomy, clearance should only be given when there is no evidence of presence of sperm in a single ejaculate when recommendations are met. It is rare that a 'diagnosis' is made without confirmation, therefore patients/clinicians should be able to freely request a second confirmatory sample. Special clearance may be given at the doctor's discretion, when there are <100 000/ml non-motile sperm present after the assessment of two specimens in full accordance with recommendations. Recommendations, as given by the Association of Biomedical Andrologists, the British Andrology Society and the British Association of Urological Surgeons 2016, are as follows:				
<ul style="list-style-type: none"> <li>• Analysis of post vasectomy semen samples should not occur until 12 weeks post-surgery and after a minimum of 20 ejaculates</li> <li>• Semen samples must be analysed within 4 hours of production, and in cases where sperm is found a repeat analysis must be performed within 1 hour of production</li> <li>• Semen should be provided in weighed specimen containers provided by TDL Andrology</li> <li>• Sexual abstinence should be between 2 and 7 days.</li> </ul>				
<b>Semen Analysis, Vasectomy Reversal*</b>	SPER	<b>Semen</b> <sup>1</sup>	2 days*	£220.50
* If required, comprehensive semen analysis can be reported within 4 hours, with morphology to follow.				
<b>Semen Culture</b>	SPCU	<b>Semen</b>	2-4 days	£81.00
<b>Semen Fructose (Qualitative assessment)</b>	SPCF	<b>Semen</b>	2 days	£94.50
<b>Semen Leucocytes</b>	PMNS	<b>Semen</b>	2 days	£120.00
<b>Semen Zinc</b>	SPCZ	<b>Semen</b>	up to 10 days	£40.50
<b>Sperm Aneuploidy</b>	SPPL	<b>Semen</b> <sup>1</sup>	4 weeks	£913.00
<b>Sperm Antibodies (Serum)</b>	ASAB	<b>B</b>	5 days	£139.00
<b>Sperm Antibodies/MAR Test (Semen)†</b>	ASPA	<b>Semen</b>	1 day	£121.00
† Sperm antibodies in semen are measured as part of the routine semen analysis.				
<b>Sperm Comet®</b>	CMET	<b>Semen</b> <sup>1</sup>	1-2 weeks	£360.00
<b>Sperm Comet® Exact Focus</b>	CMT2	<b>Semen</b> <sup>1</sup>	1-2 weeks	£490.00
<b>Sperm Comet® Extend</b>	CMT3	<b>Semen</b> <sup>1</sup>	1-2 weeks	£490.00
<b>Sperm Comet® Extend Focus</b>	CMT4	<b>Semen</b> <sup>1</sup>	1-2 weeks	£665.00
<b>Sperm Count (Post-Vasectomy)</b>	PVAS	<b>Semen</b> <sup>1</sup>	2 days	£120.00
<b>Sperm DNA Fragmentation (SCSA type test)</b>	SEXT	<b>Semen</b> <sup>1</sup>	1-2 weeks	£260.00
<b>Sperm Morphology (Kruger strict criteria)</b>	MRPH	<b>Semen</b> <sup>1</sup>	2 days	£98.50

### By special arrangement

- Sperm swim test
- Sperm preparation for overnight survival
- Sperm motility and vitality testing for epididymal toxicity
- Sperm retrieval procedures (biopsy, PESA, MESA)
- Sperm cryopreservation and storage (undertaken by Andrology Solutions – HFEA licensed)

All men who store sperm must be screened for HIV 1&2, Hepatitis B, Hepatitis C and HTLV. Under HFEA regulations, sperm can be stored for an initial period of 10 years with formal consent. All patients are offered counselling prior to sperm cryopreservation.

These arrangements, and details for other specialist semen tests, are available on request. Please contact TDL Andrology on **020 7025 7940** or email [sheryl.homa@tdlpathology.com](mailto:sheryl.homa@tdlpathology.com) for further information.

## Sperm DNA fragmentation

High sperm DNA fragmentation (SDF) is associated with reduced natural pregnancy rates and assisted conception pregnancy rates as well as live birth rates. Sperm DNA fragmentation also leads to higher miscarriage rates, as published in the ESHRE Recurrent Pregnancy Loss 2017 Guideline. High levels of DNA fragmentation may be reduced by considering varicocele repair, treatment of underlying infections or inflammation, changes in lifestyle, or with antioxidant supplements. Sperm DNA can be damaged when sperm are being made in the testes or as they mature before ejaculation. This damage breaks the DNA into fragments, so sperm DNA tests are also known as sperm DNA fragmentation tests. Men with high levels of sperm DNA damage are less likely to get their partner pregnant and have increased risk of miscarriage. Even if semen analysis results are 'normal', the sperm DNA could be damaged and therefore poor quality.

When requesting Sperm DNA Fragmentation there are two options. Please specify whether the request is for sperm DNA fragmentation by **COMET** or **SCSA**.

### Sperm Chromatin Structure Assay (SCSA type test) [SEXT]

This test has the ability to measure large numbers of cells (between 5,000 and 15,000 sperm), rapidly in an ejaculate. The SCSA test monitors the changes

in fluorescence of a probe using Acridine Orange Flowcytometry test, to detect both single and double DNA strand breaks. It has been developed using human and animal models over the last 35 years and is one of the most statistically robust tests available for sperm DNA fragmentation. It is a standardised, validated CLIA approved test with high reproducibility and low variability. The test requires a minimum sperm count of approximately 100,000/ml.

### Sperm COMET® Assay [CMET /CMET2 /CMET3 /CMET4]

Exact® tests, powered by SpermComet technology measure sperm DNA damage.

The COMET® assay sperm DNA fragmentation (SDF) tests from Examen® provide one of the highest performance levels among commercially available SDF tests. The COMET® tests directly measure total single- and double-strand DNA breaks (CMET /CMT2), and double-strand breaks only (CMT3 /CMT4). Use Examen's COMET® tests for

- couples struggling to achieve pregnancy (idiopathic infertility), especially where a semen analysis was 'normal', or where there have been repeated failed IVF cycles (CMET /CMT2)
- couples struggling to keep the pregnancy / suffering multiple recurrent pregnancy loss, especially if multiple early losses <14 weeks, and female aged mid-thirties and above (CMT3 /CMT4)

## TDL Andrology

It has the advantage of requiring only 5000 sperm so it can be used for men with low sperm counts and for surgically retrieved sperm samples. There are 4 types of COMET tests available at different costs. The clinician must select the desired type prior to sending the patient as well as ensuring completion of the Examen request form.

### Sperm Aneuploidy

Chromosomal abnormalities may be somatic cell in origin, in which case they can be detected by a simple blood karyotype analysis. However, most sperm chromosome anomalies arise as a result of errors during meiosis, which cannot be detected by a blood karyotype analysis. These anomalies can only be detected by looking at the sperm chromosomes directly. Studies have shown that sperm with a high rate of aneuploidy have a negative impact on pregnancy rate and are associated with recurrent pregnancy loss.

This test uses fluorescent in situ hybridisation (FISH) to label individual chromosomes with specific probes. Hundreds of sperm are assessed from one ejaculate. There are limitations to the test as only 5 probes are currently used routinely for analysis (three of the 22 autosomes: chromosomes 13, 18 and 21, and the sex chromosomes, X and Y), although others are available upon specific request. The results are reported showing incidence of disomy or nullisomy for each of the autosomes and for both sex chromosomes. A sex chromosome ratio is also reported. It is CE marked.

### Instructions for collection of Sperm DNA fragmentation and Aneuploidy specimens

Sperm DNA Fragmentation or Sperm Aneuploidy testing are not part of the Comprehensive Semen Analysis and need to be requested as a separate test, test code SEXT, CMET1-CMET4 and SPPL, respectively.

Semen samples ideally need to be frozen as soon as possible after liquefaction, but not longer than 60 minutes post ejaculation. Samples must be snap-frozen for Sperm DNA Fragmentation and cryopreserved in TYB for Sperm Aneuploidy. If samples are prepared by another laboratory. Two cryovials containing not less than 0.25 mls of semen is required. Frozen samples can be sent to, or collected by TDL, by arrangement, and must be accompanied with relevant patient details and the sperm count. For CMET test please ensure a completed Examen request form accompanies the TDL request form.

A count of a minimum 0.1 million/ml is required for accurate DNA fragmentation and aneuploidy reporting.

### Oxidative Stress in Semen (ROS + MIOXSYS) and Male Infertility

There is now growing evidence to support a link between oxidative stress and male infertility. It is the underlying cause of sperm DNA damage and impairs semen parameters and fertilisation, adversely affects embryo development and is associated with reduced pregnancy rates. It may also increase the risk of miscarriage. High levels of ROS may be reduced by considering varicocele repair, treatment of underlying infections or inflammation, changes in lifestyle or with antioxidant supplements.

TDL provides a comprehensive assessment of oxidative stress by **combined measurement of Reactive Oxygen Species and Redox Potential**. Please request as oxidative stress test (code ROS).

The test includes combined testing for:

- **Chemiluminescence Assay for Reactive Oxygen Species:** Reactive Oxidative stress may be measured by a simple chemiluminescence test in semen, which measures the level of reactive oxygen species.

## TDL Andrology

- **MIOXSYS Electrochemical Assay for Redox Potential:** Oxidative stress may be determined by an electrochemical assay which measures the redox potential in semen. This test measures the overall difference between total oxidants and antioxidants in the system.

If you would like to discuss these tests, or any aspect of this service, please contact TDL Andrology on **020 7025 7940** or **020 7307 7373**, or email **andrology@tdlpathology.com**.

Semen samples need specialist handling – for this reason all requests for semen analyses should be made by appointment. Practices or patients should contact TDL Andrology on **020 7025 7940** to make appointments and to confirm instructions for sample collection. Appointments can also be booked via **[www.tdlpathology.com/andrologybooking](http://www.tdlpathology.com/andrologybooking)**

### Effects of ROS-induced Oxidative Stress on Sperm

- Lipid peroxidation which damages the sperm surface causing an abnormal morphology and impaired motility.
- Damage to proteins on cell surface responsible for cell signalling and may affect enzyme function inside the cell.
- Increased semen viscosity.
- Peroxidation of DNA and subsequent unravelling or fragmentation.
- Possible mutagenic effects.
- Damage to seminiferous epithelium, damage to tubules, testicular atrophy, reduced spermatogenesis.
- Decrease in sperm vitality, motility.
- Impaired fertilization by affecting sperm capacitation and the acrosome reaction.

### Causes of Elevated ROS Levels

- Genito-urinary tract infection
- Prostatitis
- Vasectomy reversal
- Varicocele
- Cryptorchidism
- Chronic disease
- Xenobiotics
- Chemical pollutants and occupational hazards
- Heavy metal exposure
- Removal of seminal plasma during sperm preparation for assisted conception
- Drugs – cyclophosphamide, aspirin, paracetamol
- Smoking
- Excessive exercise
- Heat exposure
- Obesity
- Age

HIV 1&2/p24 Antigen  
Hepatitis B Surface Antigen  
Hepatitis C Antibodies  
Hepatitis C Antigen  
Syphilis IgG/IgM

#### VAGINAL PCR SWAB

Chlamydia/Gonorrhoea  
Mycoplasma genitalium  
Ureaplasma  
Trichomonas vaginalis  
Gardnerella vaginalis  
Herpes Simplex I/II

**TAT: 4 days**

STD4                      £397.00

**B** PCR (If culture swabs are  
needed please request separately)

### STD2 M/F STI Profile Plus (Urine and Serology)

#### SEROLOGY

HIV 1&2/p24 Antigen  
Hepatitis B Surface Antigen  
Hepatitis C Antibodies  
Hepatitis C Antigen  
Syphilis IgG/IgM

#### URINE

Chlamydia/Gonorrhoea  
Mycoplasma genitalium  
Ureaplasma  
Trichomonas vaginalis  
Gardnerella vaginalis  
Herpes Simplex I/II

**TAT: 4 days**

STD2                      £397.00

**B** FCRU (If culture swabs are  
needed please request separately)

### STD5 Serology only

HIV 1&2/p24 Antigen  
Hepatitis B Surface Antigen  
Hepatitis C Antibodies  
Hepatitis C Antigen  
(Early detection)  
Syphilis IgG/IgM

**TAT: 1 day**

STD5                      £152.00

**B**

### STD3 Female STD Quad (PCR Swab and Serology)

#### SEROLOGY

HIV 1&2/p24 Antigen  
Syphilis IgG/IgM

#### VAGINAL PCR SWAB

Chlamydia  
Gonorrhoea

**TAT: 2 days**

STD3                      £139.00

**B** PCR

### STD6 Serology only without HIV

Hepatitis B Surface Antigen  
Hepatitis C Antibodies  
Hepatitis C Antigen  
(Early detection)  
Syphilis IgG/IgM

**TAT: 1 day**

STD6                      £142.50

**B**

### STD8 Vaginitis/BV Profile using Culture & PCR Swab

Candida (Culture)  
Gardnerella vaginalis by PCR  
Mycoplasma genitalium  
Trichomonas vaginalis by PCR  
Ureaplasma urealyticum

**TAT: 3 days**

STD8                      £150.00

PCR and STM

## Sexual Health

### STD9 Symptomatic lesion sample using PCR Swab from lesion

Syphilis by PCR (chancere)  
Herpes Simplex I/II by PCR  
(from single swab)

**TAT: 7 days**

STD9 £130.50

PCR Swab

### 7 STI Profile by PCR (7 tests from 1 Sample)

Chlamydia trachomatis  
Neisseria gonorrhoea  
Mycoplasma genitalium  
Ureaplasma species  
Trichomonas vaginalis  
Gardnerella vaginalis  
Herpes Simplex I/II

**All tests can be requested individually**

**TAT: 2 days**

DL12 £140.00

FCRU / PCR / TPV

### CT/GC/Trichomonas/ Mgen – PCR Swab

Chlamydia  
Gonorrhoea  
Trichomonas vaginalis  
Mycoplasma genitalium

**All tests can be requested individually**

**TAT: 2 days**

SGTM £120.00

PCR Swab

### CT/GC/Trichomonas/ Mgen – Thin Prep

Chlamydia  
Gonorrhoea  
Trichomonas vaginalis  
Mycoplasma genitalium

**All tests can be requested individually**

**TAT: 2 days**

TGTM £120.00

TPV

### CT/GC/Trichomonas/ Mgen – Urine

Chlamydia  
Gonorrhoea  
Trichomonas vaginalis  
Mycoplasma genitalium

**All tests can be requested individually**

**TAT: 2 days**

CGTM £120.00

FCRU

### HIV/HBV/HCV Screen by PCR/NAAT (10 days post exposure)

Positive findings will be reflexed for confirmatory testing  
HIV1 and HIV2 (RNA)  
Hepatitis B Virus (HBV DNA)  
Hepatitis C Virus (HCV RNA)

Samples must be received in the laboratory within 2 days of sample taking

STDX provides diagnostic confirmatory testing only when used in addition to serology for Ag/Ab HIV-1&2, HBV, HCV

**TAT: 3 days**

STDX £200.50

**A** 2 x 6mls or 2 x 4mls  
(Vacutainer only)

### HIV/HBV/HCV (Early detection by PCR/NAAT) with Syphilis

HIV1 and HIV2 (RNA)  
Hepatitis B Virus (HBV DNA)  
Hepatitis C Virus (HCV RNA)  
Syphilis IgG/IgM

Samples must be received in the laboratory within 2 days of sample taking

STXX provides diagnostic confirmatory testing only when used in addition to serology for Ag/Ab HIV-1&2, HBV, HCV

**TAT: 3 days**

STXX £224.00

**B** **A** 2 x 6mls or 2 x 4mls

## Sexual Health

### HIV Rapid RNA HIV-1 QUALITATIVE

Early detection from 10 days  
HIV-1 RNA  
Sample must be received in  
the laboratory within 24 hours  
of sample taking

**TAT: 1 day**

LHIV £184.00

**A** (Vacutainer only)

### HIV Rapid RNA HIV-1 QUANTITATIVE

Rapid testing for HIV-positive  
patient prognosis and response  
to antiretroviral therapy  
HIV-1 RNA VIRAL LOAD  
(40 copies/ml)  
Sample must be received in  
the laboratory within 24 hours  
of sample taking

**TAT: 1 day**

RHIV £184.00

**A** (Vacutainer only)

### STI Profile: MSM1 (Venous)

HIV 1&2/p24 Ag  
Syphilis IgG/IgM  
Chlamydia/Gonorrhoea – Urine  
Chlamydia/Gonorrhoea – Throat  
Chlamydia/Gonorrhoea – Rectal

**TAT: 2 days**

MSM1 £216.00

**B** / FCRU / PCR Swab  
Throat / PCR Swab Rectal

### STI Profile: MSM2 (Venous)

HIV 1&2/p24 Ag  
Syphilis IgG/IgM  
Hepatitis B Surface Antigen  
Hepatitis C Antibodies  
7 STI by PCR Screen  
Chlamydia/Gonorrhoea – Throat  
Chlamydia/Gonorrhoea – Rectal  
Macrolide Resistance Test (M.gen)

**TAT: 3 days**

MSM2 £445.00

**B** / FCRU / PCR Swab Throat /  
PCR Swab Rectal

### Triple Swab Female STI Profile (Vaginal/Throat/Rectal Swabs) (PCR)

Chlamydia/Gonorrhoea – Vaginal  
Chlamydia/Gonorrhoea – Throat  
Chlamydia/Gonorrhoea – Rectal

**TAT: 2 days**

3SWA £165.50

PCR Swab x 3 (label by site)

## Sexual Health

STI	INCUBATION PERIOD	SAMPLE SITE	TEST	TEST CODE	SAMPLE TYPE	TAT
<b>Chlamydia CT</b> (Bacterial)	1 – 3 weeks, up to 6 weeks	Urine	Chlamydia	CPCR	First catch Urine	2 days
		Cervix/Vagina	Chlamydia	SPCR	PCR Swab	2 days
		Cervix/Vagina	Chlamydia	TPCR	Thin Prep Vial	2 days
<b>Gonorrhoea GC</b> (Bacterial)	2 – 7 days, up to 1 month	Urine	Gonorrhoea by PCR	CGON	First Catch Urine	2 days
		Cervix/Vagina	Gonorrhoea by PCR	SGON	PCR Swab	2 days
		Cervix/Vagina	Gonorrhoea by PCR	TGON	Thin Prep Vial	2 days
		Cervix	Gonorrhoea by Culture	GONC	Black Charcoal swab	3-5 days
		Rectal	Gonorrhoea by Culture	GONR	Black Charcoal swab	3-5 days
		Throat	Gonorrhoea by Culture	GONT	Black Charcoal swab	3-5 days
		Urethral	Gonorrhoea by Culture	GONU	Black Charcoal swab	3-5 days
		Other site	Gonorrhoea by Culture	GONO	Black Charcoal swab	3-5 days
<b>CT/GC Combined</b> (Bacterial)	1 – 3 weeks, up to 6 weeks	Urine	CT/GC	CCG	First Catch Urine	2 days
		Cervix/Vagina	CT/GC	SCG	PCR Swab	2 days
		Cervix/Vagina	CT/GC	TCG	Thin Prep Vial	2 days
		Rectum	CT/GC	RSCG	PCR Swab	2 days
		Throat	CT/GC	TSCG	PCR Swab	2 days
<b>Mycoplasma genitalium</b> (Bacterial)	Symptoms develop at 1 – 3 weeks	Urine	Mycoplasma genitalium by PCR	MGEN	First Catch Urine	2 days
		GU Site	Mycoplasma genitalium by PCR	MGEN	PCR Swab	2 days
		Cervix/Vagina	Mycoplasma genitalium by PCR	MGEN	Thin Prep Vial	2 days
<b>Ureaplasma urealyticum</b> (Bacterial)	Symptoms develop at 1 – 3 weeks	Urine	Ureaplasma by PCR	UGEN	First Catch Urine	2 days
		GU Site	Ureaplasma by PCR	UGEN	PCR Swab	2 days
		Cervix/Vagina	Ureaplasma by PCR	UGEN	Thin Prep Vial	2 days
<b>Trichomonas vaginalis</b> (Parasitic)	4 – 28 days, many patients are asymptomatic carriers	Urine	Trichomonas vaginalis by PCR	TVPC	First Catch Urine	2 days
		GU Site	Trichomonas vaginalis by PCR	TVPC	PCR Swab	2 days
		Cervix/Vagina	Trichomonas vaginalis by PCR	TVPC	Thin Prep Vial	2 days
<b>Gardnerella vaginalis</b> (Bacterial)	Imbalance of normal flora	Urine	Gardnerella vaginalis by PCR	GVPC	First Catch Urine	2 days
		GU Site	Gardnerella vaginalis by PCR	GVPC	PCR Swab	2 days
		Cervix/Vagina	Gardnerella vaginalis by PCR	GVPC	Thin Prep Vial	2 days

Turnaround times are from the point at which samples are entered into TDL's laboratory information management systems, and provide a guide for the issue of results. Some tests are run in laboratory departments that do not operate at weekends.

## Sexual Health

STI	INCUBATION PERIOD	SAMPLE SITE	TEST	TEST CODE	SAMPLE TYPE	TAT
<b>Bacterial Vaginosis (BV)</b> (Bacterial)	Imbalance of normal flora	Cervix/Vagina	Bacterial Vaginosis (BV) Profile by both MICROSCOPY and PCR	STD8	Both Microscopy & PCR swab	3 days
<b>Herpes Simplex Virus I/II</b> (Viral)	2–14 days, testing is most appropriate for patients with symptomatic lesion(s)	Herpes lesion	Herpes by PCR Herpes by PCR	HERS HERD	PCR Swab First Catch Urine	5 days 5 days
<b>Human Papillomavirus</b> (Viral)	HPV is the most common sexually transmitted infection – usually asymptomatic	Cervical cells Cells/papilloma from site (anal)	HPV (28 individually typed LR & HR DNA subtypes)	HP20	Thin Prep Vial Brush sampler	3 days
<b>Genital warts</b> (Viral)	Weeks/months after exposure	GU Warts	HPV (28 individually typed LR & HR DNA subtypes)	HP20	Thin Prep Vial Brush sampler Cells/Papilloma	3 days
<b>Syphilis/Herpes</b> (Bacterial/Viral)	Whenever active lesions are present	Symptomatic lesion	Syphilis/Herpes Lesion Profile	STD9	PCR Swab	7 days
<b>Syphilis</b> (Bacterial)	9–21 days, but up to 90 days	Blood	Syphilis IgG/IgM	SERJ		1 day
<b>Herpes Simplex Virus I/II</b> (Viral)	IgG 4–6 weeks after exposure, IgM 5–35 days after exposure, after which test IgG	Blood	Herpes IgG (past infection) Herpes IgM (current/recent)	HERP HERM	 	2 days 2 days
<b>HIV</b> (Viral)	Usually 10–90 days, but up to 180 days	Blood	HIV 1&II/p24 antigen (screening from 45 days post exposure (BHIVA))	HDUO		1 day

## Sexual Health

STI	INCUBATION PERIOD	SAMPLE SITE	TEST	TEST CODE	SAMPLE TYPE	TAT
<b>Hepatitis B (Viral)</b>	Usually 45–180 days, average of 60–90 days	Blood	Hepatitis B surface antigen	AUAG	<b>B</b>	1 day
<b>Hepatitis C Ab (Viral)</b>	Usually 9–180 days, average of 45–65 days	Blood	Hepatitis C Antibodies	HEPC	<b>B</b>	1 day
EARLY DETECTION PROFILES BY PCR	INCUBATION PERIOD	SAMPLE SITE	TEST	TEST CODE	SAMPLE TYPE	TAT
<b>7 STIs by PCR</b>	One sample for 7 STI Tests	Urine Cervix Vagina	Chlamydia Gonorrhoea Mycoplasma genitalium Ureaplasma genitalium Trichomonas vaginalis Gardnerella vaginalis Herpes Simplex I/II	PP12	<b>Thin Prep Vial</b> or <b>First Catch Urine</b> or <b>PCR Swab</b> or <b>Aptima urine</b> or <b>multisite swab</b>	2 days
<b>HIV / HBV / HCV</b>	Early Detection Screen by PCR Multiplex	Blood	HIV 1&2 RNA Hepatitis B (HBV DNA) Hepatitis C (HCV RNA)	STDx	<b>A</b> 2 x 6mls or 2x4mls (Vacutainer only)	3 days

Turnaround times are from the point at which samples are entered into TDL's laboratory information management systems, and provide a guide for the issue of results. Some tests are run in laboratory departments that do not operate at weekends.

## TDL website

The TDL website gives updated details of our tests – sample types, turnaround times and special instructions. The Specialities section provides a new way to find tests you need, and a Services section has additional information for TDL Collect, Postal Pathology and TestGuide app. Reference Ranges can be requested by emailing [refranges@tdlpathology.com](mailto:refranges@tdlpathology.com). Full details of our tests and profiles are also available in the TDL TestGuide app.

Salivary Antibodies (SAB)  
C Reactive Protein (CRP)

**TAT: 15 days**

RH7 £106.00

B

## Coeliac Disease (CD)

Coeliac Disease (CD) is an immune-mediated disease of the intestines that is triggered by the ingestion of gluten in genetically susceptible individuals. Gluten is the major protein component of wheat, rye, and barley. Genetic predisposition does play a key role in CD, and it is well known that CD is strongly associated with specific HLA class II genes known as HLA-DQ2 and HLA-DQ8. Approximately 95% of CD patients express HLA-DQ2, and the remaining patients are usually HLA-DQ8 positive. The negative predictive value for both tests is higher than 99%. However, the HLA-DQ2 allele is common and is carried by approximately 30% of Caucasian individuals. Thus, HLA-DQ2 or HLA-DQ8 is necessary for disease development but is not sufficient for disease development; its estimated risk effect is only 36-53%.

Note: History taking is important if a patient has been on a gluten-free diet for 6-12 months, approximately 80% will lose their antibody response. After 5 years this increases to >90%.

### Coeliac pathway

To determine the new Coeliac Pathway, a TDL audit of more than 12,000 requests for coeliac testing was carried out and results assessed within UKAS current guidelines. The purpose of these new guidelines is to reduce the risk of missing IgA deficient patients.

The new pathway covers this by adding a total IgA to all low Tissue Transglutaminase (TTG) IgA results to check for an IgA deficiency. If an IgA deficiency is identified, a reflex deamidated gliadin IgG will be carried out to determine whether the patient is likely to have coeliac disease with an IgG antibody.

The changes are as follows:

- Initial TTG IgA samples are received and tested
- If TTG IgA is LOW <0.2 U/ml reflex testing for Total IgA will be undertaken
- If Total IgA is LOW <0.1 g/L then reflex testing for Gliadin IgG test will be undertaken
- If TTG IgA is HIGH  $\geq 10$  U/ml then reflex testing for Endomysial IgA will be undertaken as a confirmatory test for first time positive samples.

### Endomysial IgA

- If TTG IgA is positive endomysial IgA will be carried out as a confirmatory test. This only needs to be done once in the patients history.

### Deamidated gliadin IgG requests

- This can be requested as an individual standalone test as well as being incorporated into the coeliac pathway. This may be useful when testing children's samples.

Appropriate clinical comments will be added to results automatically – see table.

### Gliadin IgG Requests

TTG IgA result U/ml	Total IgA result for new assay g/L	Deamidated gliadin IgG result U/ml	Comment
0.2 to 10	N/A	N/A	Coeliac disease unlikely (please note that if the patient has no dietary gluten results may appear false negative)
$\geq 10$	N/A	N/A	Suggestive of coeliac disease
<0.2	$\geq 0.1$	N/A	Coeliac disease unlikely (please note that if the patient has no dietary gluten, results may appear false negative)
<0.2	<0.1	$\geq 10$	Consistent with coeliac disease in a patient with selective IgA deficiency
<0.2	<0.1	<7	Coeliac disease unlikely (please note that if the patient has no dietary gluten, results may appear false negative)
<0.2	<0.1	7-10	Result equivocal suggest referral to a gastroenterologist for consideration of duodenal biopsy

## Virology

### Hepatitis viral load sample instructions

Whole blood can be stored at 2°C to 30°C and must be centrifuged within 24 hours of specimen collection. Separate the plasma or serum from the pelleted red blood cells following the manufacturer's instructions for the tube used. Plasma or serum can be tested on the Panther system in the primary tube or transferred to a secondary Aptima Specimen Aliquot Tube (SAT) for testing on the Panther system. If not tested immediately, plasma and serum can be stored in accordance with the specifications below. If transferred to the SAT, plasma may be frozen at -20°C or -70°C, and serum may be frozen at -20°C. Do not freeze specimens in EDTA, ACD, or serum primary collection tubes.

After centrifugation: in the primary collection tube at 2°C to 8°C for up to 3 days.

In the Aliquoted Tubes: at 2°C to 8°C for up to 5 days.

In the Aliquoted Tubes: at -20°C or -70°C for up to 90 days.

#### Hepatitis B Immunity/ Vaccination Anti-HBs

less than 10 mIU/ml	Non-immune to Hepatitis B
10–50 mIU/ml	Borderline – booster indicated
50–100 mIU/ml	Low level immunity – booster suggested
100 mIU/ml and over	Immune to Hepatitis B

### HAV, HBV and HCV assays

All virology samples are processed as per manufacturers sample requirements and guidelines.

Hepatitis virus is named in order of their discovery A, B, C, D, E and G.

#### Hepatitis A

Hepatitis A is spread through food and water that have been contaminated with the virus derived from human faeces and urine. Hepatitis A is an acute infection, not a chronic form of the disease.

#### HBV Assays

##### Hepatitis B surface antigen (HBsAg) (AUAG)

A protein on the surface of HBV; it can be detected in high levels in serum during acute or chronic HBV infection. The presence of HBsAg indicates that the person is infectious. The body normally produces antibodies to HBsAg as part of the normal immune response to infection. HBsAg is the antigen used to make Hepatitis B vaccine.

##### Hepatitis B surface antibody (anti-HBs) (HBIM)

The presence of anti-HBs is generally interpreted as indicating recovery and immunity from HBV infection. Anti-HBs also develops in a person who has been successfully vaccinated against Hepatitis B.

##### Total Hepatitis B core antibody (anti-HBc) (HBC)

Appears at the onset of symptoms in acute Hepatitis B and persists for life. The presence of anti-HBc indicates previous or ongoing infection with HBV in an undefined time frame.

## Virology

### **IgM antibody to Hepatitis B core antigen (IgM anti-HBc) (HBCM)**

Positivity indicates recent infection with HBV (≤6 months). Its presence indicates acute infection.

### **Hepatitis B e antigen and antibody (HEPE)**

**Hepatitis B e antigen (HBeAg):** A secreted product of the nucleocapsid gene of HBV that is found in serum during acute and chronic Hepatitis B. Its presence indicates that the virus is replicating and the infected person has high levels of HBV.

### **Hepatitis B e antibody (HBeAb or anti-HBe):**

Produced by the immune system temporarily during acute HBV infection or consistently during or after a burst in viral replication. Spontaneous conversion from e antigen to e antibody (a change known as seroconversion) is a predictor of long-term clearance of HBV in patients undergoing antiviral therapy and indicates lower levels of HBV.

### **HBV Viral Load (DNAB)**

This assay measures the concentration of Hepatitis B viral DNA in patient serum. The test enables the viral load at the beginning of treatment to be established and, thereafter, monitored to indicate treatment success.

### **HBV Genotyping (BGEN)**

Identifies the hepatitis B genotype (A to H) in a patient's serum/plasma. This is critical for determining treatment and monitoring response.

### **HBV Drug Resistance Detection (HBRM)**

Detects Hepatitis B virus wild-type and drug-induced mutations, associated with lamivudine, entecavir and tenofovir.

## HCV Assays

### **HCV Antibody (HEPC)**

The test indicates exposure to virus but does not necessarily signify current infection. The HCV antibody test may therefore be used to screen patients for possible HCV infection to detect the presence of antibodies to the virus, indicating exposure to HCV. This test cannot tell if the viral infection is active, only that you were exposed to the virus in the past.

### **HCV Antigen (HCAG)**

HCV Antigen is detectable well before the occurrence of antibodies against HCV. When virus is present, but antibodies are not detectable, a negative antibody test does not rule out HCV infection. Active HCV infection, either acute or chronic is characterised by the presence of HCV Antigen. This is analogous to HepB sAg (AUAG) in active HBV Infection.

### **HCV Viral Load (QPCR)**

Measures the concentration of Hepatitis C viral RNA in patient serum. This state-of-the-art assay enables the viral load at the beginning of treatment to be established and, thereafter, monitored to indicate treatment success.

### **HCV Genotype for Treatment (CGEN)**

Determines the HCV genotype in a patient's serum. The result is presented as being of either Genotype [1, 5, 6], [4] or [2, 3]. This grouping reflects required treatment duration of the different genotypes.

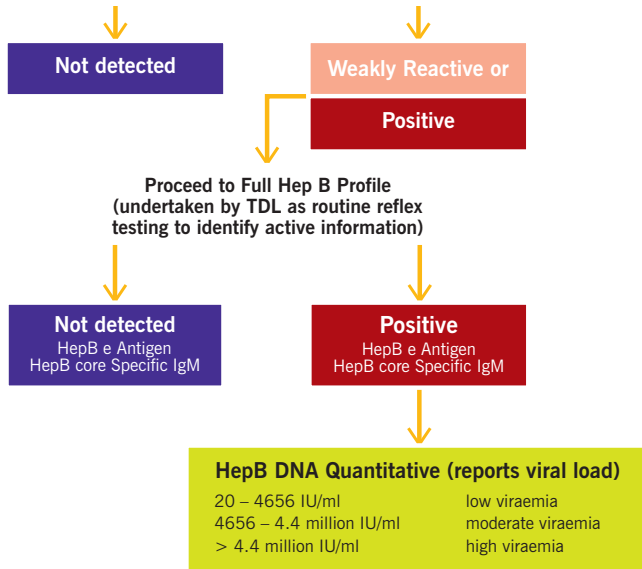

### **HCV Drug Resistance**

Detects hepatitis C wild-type or drug-induced mutations associated with resistance to HCV drugs including NS5A inhibitors, NS5B inhibitors or NS3 inhibitors.

## Hepatitis B Surface Antigen

### Hepatitis B

- **Transmission:** Sexual, parenteral, perinatal, direct contact between individuals.
- **Clinical Signs:** Asymptomatic in 90% of cases.
- **Cure:** 95% of cases (adults).
- **Complications:** Cirrhosis and hepatocellular carcinoma.
- **Development of chronic form:** Yes (5% of adult cases).
- **Prevention:** Vaccination +++++; specific IgG.
- **Main Marker:** HBS Ag, anti HBc IgM, total anti HBc Ab, Anti-HBs Ab, HBe Ag, Anti-HBe Ab, HBV DNA.

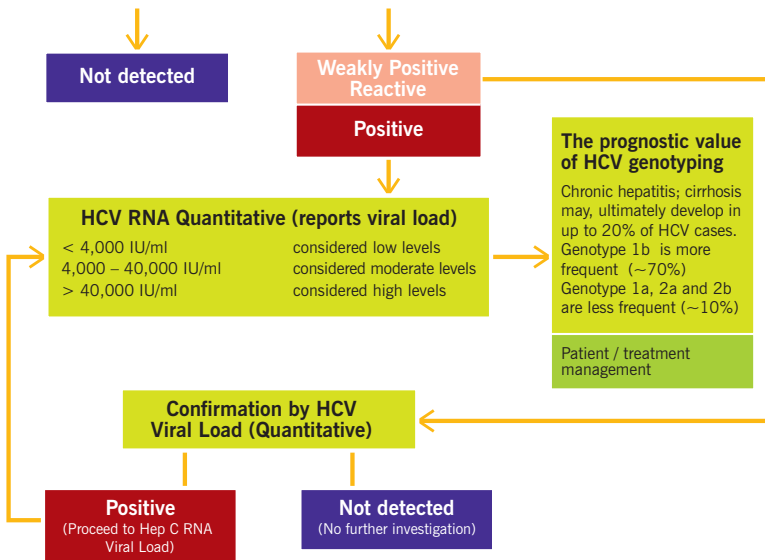

Turnaround times are from the point at which samples are entered into TDL's laboratory information management systems, and provide a guide for the issue of results. Some tests are run in laboratory departments that do not operate at weekends.

## Hepatitis C Antibodies

### Hepatitis C

- **Transmission:** Parenteral, nosocomial, sexual.
- **Clinical Signs:** Asymptomatic in 90% of cases.
- **Cure:** 95% of cases (adults).
- **Complications:** Cirrhosis and hepatocellular carcinoma.
- **Development of chronic form:** Yes (80% of adult cases).
- **Prevention:** Hygiene, no vaccination.
- **Main Marker:** Anti HCV Ab, HCV RNA

## Tumour Markers/Sites

### HE4 + ROMA (Earlier Detection of Ovarian Tumour)

HE4  
CA 125  
ROMA

Calculated Algorithm for pre and post menopausal risk of malignant disease.

**TAT: 1 day**

HE4 £139.00

**B**

### Prostate Profile (Total & Free PSA)

Prostate Specific Antigen (Total)  
Free PSA  
Calculated Ratio

The ratio of Free to Total PSA may help discriminate between prostate cancer and benign prostatic hyperplasia.

**TAT: 1 day**

PR2 £97.00

**B**

### Testicular Tumour Profile

Lactate Dehydrogenase (LDH)  
Alpha-Fetoprotein  
HCG (Oncology)

**TAT: 1 day**

TTP £134.00

**B**

## Stockholm3 test for early detection of Prostate Cancer

### Key characteristics of Stockholm3

- Increased early detection – increased sensitivity
- Increased specificity reduces over testing, unnecessary biopsies by 50% and treatment
- Higher accuracy compared to PSA, PSAD and prostate cancer risk calculator
- Can distinguish between aggressive and benign tumours in a way that PSA testing cannot
- Validated in combination with MRI and in multiple ethnicities
- Shown to detect clinically significant prostate cancers in PSA levels of 1.5–2.9 ng/ml
- Reduces healthcare costs

# TDL Genetics

TDL Genetics is a consultant-led service which is able to provide extensive expertise in the testing, diagnosis and genetic counselling of inherited disorders. Genetic tests are performed on DNA for molecular genetic analysis and on whole chromosomes for cytogenetic analysis. Some tests are part of profiles that can be linked with assays from other TDL disciplines, such as biochemistry and haematology, to give more comprehensive results for the patient.

Genetic tests are available for:

- Prenatal diagnosis and rapid trisomy screening by QF-PCR (Amnio-PCR and CVS-PCR)
- Carrier screening
- Newborn chromosome analysis
- Confirmation of symptomatic individuals and pre-symptomatic testing
- Genetic variation that influences risk of disease
- Identity studies (paternity, zygosity, tissue typing)
- Fertility studies
- Products of conception
- Cancer

## QF-PCR: DNA peaks from an unaffected fetus

## QF-PCR: DNA peaks from a fetus with Down Syndrome

Genetic testing is sometimes complex and tests will vary in their ability to detect variants or to detect all patients who have, or will develop, the disease. Some tests are diagnostic for a condition, others are indicative or are associated with an altered risk for a condition. Results can affect the lives of individuals and have implications for their family, for insurance and employment. Where testing will predict the inheritance of a disease in a healthy person,

counselling and consent are mandatory.

For these tests, please complete the Genetic Request form (including informed consent). Our service provides result interpretation and risk assessment. Genetic counselling can be arranged by TDL's Consultant Clinical Geneticist.

Download TDL Request Forms from:

[www.tdlpathology.com/  
tests/request-forms/](http://www.tdlpathology.com/tests/request-forms/)

To meet the increasing range and complexity of genetic testing we have developed an excellent collaboration with other specialist laboratories.

Tests marked GENE are sent to these laboratories within our network and have a fixed price.

GENE panel composition may change throughout the year to reflect new and improved developments. Turnaround times may be longer if follow-up studies are required.

Specimen Receipt at The Doctors Laboratory is 24 hours a day. Specifically, TDL Genetics results service is available Monday to Friday 8.30am–5.30pm with the laboratory also open for processing of samples on Saturdays from 9.00am–1.00pm. The Non-invasive prenatal testing (NIPT) laboratory is open Monday to Saturday.

Test codes, sample requirement codes, turnaround times, and prices may be found on the following pages.

All samples must be collected in the specified containers, as shown in the key at the back of this guide. Samples should be fresh and in good condition (e.g. not clotted if EDTA or heparinised whole blood is required) otherwise testing may be adversely affected and another sample may be required. Small DNA samples are stored routinely for one year, larger DNA samples can be stored by special arrangement.

## TDL Genetics

Instructions for transportation, sample labelling, and the completion of request forms can be found on the reverse of the TDL Genetics Request Form.

The locations of the Laboratory and Patient Reception are indicated on the map on the reverse of each request form. If you do not find the test you require in this directory or need more information and advice please telephone the laboratory on **020 7307 7409**.

## Sending samples to the laboratory

### Transport arrangements

All specimens should be kept at room temperature and despatched to the laboratory as soon as possible, by TDL/international courier, first class post, guaranteed next day delivery or a reliable alternative.

If a delay in sending the sample is unavoidable, please refrigerate overnight – DO NOT FREEZE. For NIPT sample stability see page 134, do not refrigerate or freeze NIPT bloods.

Specimens must not be allowed to come in contact with request forms, but should be kept separate by using dual – pocketed plastic bags. Specimens for inland postage must be packed in a rigid crush-proof container according to current Post Office guidelines.

IATA guidelines should be followed for international transport (advice is available from the laboratory).

### Labelling of high risk samples

Please note that it is the responsibility of the referring clinician to ensure that high-risk samples are clearly identified to reduce the risk of infection to staff and others.

## Patient details on request forms and samples

Request and consent forms are available directly from TDL Genetics. In order to avoid unnecessary time spent in obtaining details please provide the following information:

### Information for request forms

- Surname, forename (not initials), date of birth and birth sex of patient for postnatal referrals
- Full name (not initials) and location of referring clinician
- Full address of clinician to whom the result should be sent
- Legible clinical summary (reason for referral), including details of any relevant family history
- Address for billing – doctor, patient or other
- Gestation on prenatal samples
- Hospital or reference number
- Test required

### Essential information on sample container label

- Patient's surname and forename (not initials)
- Date of birth
- Hospital number or reference number

## Consent forms

Consent forms (see [tdlpathology.com/tests/request-forms](http://tdlpathology.com/tests/request-forms)) are available for genetic testing. As genetic testing may have implications for other family members and is regarded as personal data, it is recommended that written consent is obtained wherever possible. In cases with predictive testing for severe disorders, as indicated in the laboratory guide, it is essential that patients should also be offered formal genetic counselling. It is the responsibility of the referring clinician to obtain appropriate consent from the patient.

## TDL Genetics

### Unlabelled samples

Unlabelled samples will ONLY be processed if the individual who took the sample can confirm the sample is from the patient in question. In the absence of this assurance, the sample will be discarded and a repeat required.

### Genetic testing

#### The importance of clinical details

Clinical details are very important when providing genetic analysis. The more clinical information that is available (e.g. details of ultrasound information, phenotypic features or family history) the better the service we can provide. Failure to provide this information for cytogenetic studies may result in an inaccurate analysis.

### Molecular genetics

Clinical details can be extremely important for clinical interpretation of a molecular genetic test.

For example, the clinical comments accompanying a cystic fibrosis screening report will vary depending on whether the patient is a potential gamete donor or a person exhibiting a cystic fibrosis phenotype.

It may also be crucial, where a variant has already been shown to be segregating in a family, to be provided with information concerning the variant and a family pedigree to ensure the correct analysis is performed and reliable risk figures calculated.

### Cytogenetics

Cytogenetic analysis is performed according to the Professional Guidelines for the Association of Clinical Genomic Science and the recommendations provided are dependent on the clinical indications given for each case.

Clinical details inform the investigation at all stages:

- Prior to analysis, clinical details may indicate, for example, that procedures such as chromosome breakage or leukaemic studies are required, which must be referred to the oncogenomic department or specialist centre.
- During analysis they may indicate that extra cells should be screened to investigate the possibility of mosaicism, for example in a diagnosis of suspected Turner syndrome, or that particular chromosomes must be targeted for high-resolution study, for example chromosome 22q11.2 in suspected DiGeorge syndrome.
- When the analysis has been completed they may help to provide an accurate interpretation of the findings and in some instances prompt further investigations, for example FISH or molecular genetic studies.

When clinical details are not available a routine analysis will be performed and a conditional report issued.

### Sample Stability

#### Molecular Genetic Samples

Whole blood collected in EDTA should be sent to the laboratory between 4°C-28°C within 48 hours.

Long term storage should be at 2-8°C.

Extracted DNA samples should be sent to the laboratory between 4°C-28°C.

## TDL Genetics

### Cytogenetic Samples

Cytogenetic studies require living cells, please ensure that samples reach the laboratory as soon as possible. If a delay before dispatch is unavoidable, samples may be stored in a refrigerator (4°C) but they must not be frozen.

Samples sent more than 48 hours after sampling, or kept at temperatures below 4°C and greater than 38°C may have inhibited growth.

Information concerning packaging, transportation, and labelling of samples is provided on the reverse of our TDL Genetics Request Form.

### Requesting additional tests

Any further tests not requested at the time of sample receipt must be requested within:

- 1 week for tests requiring prenatal culture or cultured cells
- 2 weeks for DNA testing
- 2 weeks for cell culture testing
- 3 months for FISH testing

Samples can be stored for longer periods if specifically requested at the time of sample receipt.

### Postnatal Diagnosis (Blood Culture)

**Reasons for analysis:** Chromosome studies are requested where problems that may have a cytogenetic basis are suspected, e.g. babies with birth defects; children with developmental delay and physical handicaps, delayed puberty, or adults with fertility problems. Additionally, prospective gamete donors are screened to detect carriers of balanced chromosome rearrangements.

**Sample requirements:** Lithium heparin whole blood specimens are required – gently mixed to prevent clotting and must not be frozen. See sample stability section for cytogenetic samples. Sample volumes may be reduced for children (2-4ml) and neonates (1-2ml).

**Turnaround time:** The usual turnaround time is 2-3 weeks however the laboratory will endeavour to respond to urgent requests. Where a major trisomy is suspected, a rapid PCR screen may be performed to provide an urgent provisional result.

### Notes

- Rarely, blood samples fail to culture (<1%);
- The culture may yield chromosomes of insufficient quality. This will be indicated on the report and a repeat study suggested;
- The laboratory should be informed if the patient has recently received a blood transfusion.
- The laboratory should be informed if the patient has EVER had a bone marrow transplant.
- The patient's birth sex should be included on the request form.
- For fetal blood samples a maternal blood sample must also be provided to confirm fetal origin.

### Prenatal diagnosis

Reasons for analysis: Chromosome studies are requested where pregnancies are identified as being at risk of a cytogenetic abnormality e.g. positive maternal serum screening combined NT test; fetal abnormalities found on ultrasound; or where a parent is a known carrier of a chromosome anomaly, or where a high risk trisomy has been found by NIPT.

### Sample requirements:

- Amniotic fluid – 10ml+ in a plain sterile, leak-proof container. Suitable containers can be provided by the laboratory. The specimen must not be frozen. See sample stability section for cytogenetic samples.
- Chorionic villus – 5mg+ in sterile transport medium. Suitable containers containing medium can be provided by the laboratory. The specimen must not be frozen. See sample stability section for cytogenetic samples.

## TDL Genetics

- Fetal blood – 1-2ml LITHIUM HEPARIN whole blood, gently mixed to prevent clotting. The specimen must not be frozen. See sample stability section for cytogenetic samples. For fetal blood samples a maternal blood sample must also be provided to confirm fetal origin.

**Turnaround time:** This is dependent on the rate of cell growth, however, the usual turnaround time is approximately 2 weeks. A number of circumstances now occur more frequently, as invasive prenatal diagnosis becomes less common, that may result in delayed reporting time. These include:

- A delay in transportation in order to collect a batch of samples to reduce courier costs. Even when couriered promptly, sample growth may be slower than that seen in samples sent immediately.
- Sampling at early or late gestations, for example to confirm non-invasive tests or follow up anomaly scans.
- A tendency to take smaller quantities of sample or to take insufficient sample for multiple techniques.
- The request for karyotyping as an add-on after an initial PCR test.

Fetal blood results will usually be reported by 10 calendar days. For all other prenatal tests, please contact the laboratory prior to taking samples.

### Notes

- Maternal contamination, and mosaicism may complicate the analysis and may lead to the suggestion that a second invasive test is performed.
- Rarely, cultures fail to grow (overall <1%)
- Chromosome abnormalities smaller than resolution of G-band analysis may not be detected (higher resolution techniques such as Array-CGH may be more appropriate in certain circumstances).
- For TTTs or heavily blood stained amniocentesis samples, please provide a maternal EDTA blood sample for comparison studies.

## Solid tissue

**Reasons for analysis:** Fibroblast cultures may be used in addition to blood cultures, for example where tissue specific mosaicism is suspected, or where blood samples cannot be obtained. POC samples may be requested for early spontaneous miscarriages, stillbirths, or to confirm a prenatal diagnosis.

SCAN ME

For more information on Products of conception for genetic investigations

[www.tdlpathology.com/poc](http://www.tdlpathology.com/poc)

**Sample requirements:** All specimens should be placed in a sterile container, preferably containing transport medium. This can be supplied by the laboratory. Sterile normal saline can be used if transport medium is not available. Samples must not be placed in formaldehyde or other preservative and must not be frozen. See sample stability section for cytogenetic samples.

**Turnaround time:** This is dependent on the rate of cell growth, however, the usual turnaround time is approximately 4 weeks.

### Notes

- Material from miscarriages has a relatively high culture failure rate (around 20%). Where failure occurs, alternative molecular methods may be attempted, usually a KaryoLite Bacs-on-Beads assay that can detect whole monosomy or trisomy of any chromosome, if possible.
- If no villus or fetal parts are identified in supposedly POC material and a normal female chromosome result is found, this may indicate that maternal tissue has been cultured (this will be noted on our report).

## TDL Genetics

- If a request is made for remaining pregnancy loss tissue to be returned to the patient or hospital for burial or cremation, we will return the sample as soon as possible once adequate tissues have been used for testing. Please ensure that this is communicated to the lab using a hospital consent form, noted on the referral form or by email. Patients can arrange to collect remaining tissues from TDL Patient Reception.
- The lab will send all remaining tissue for samples without specific consent, for sensitive incineration. Please note that there is no distinction made between fetal and other pregnancy tissues for this process and there will be no ashes afterwards. The lab keeps detailed records of all pregnancy tissue sent for incineration and a Certificate of Destruction is available if required.

### Fluorescence in situ hybridisation (FISH)

Where FISH studies for specific microdeletion syndromes are required this must be indicated on the request form.

Note: FISH studies for a rapid pre or postnatal aneuploidy screen have now been superseded in our laboratory by multiplex-PCR technology. Subtelomeric screens are now performed by Array CGH as part of developmental delay investigations. Common microdeletion syndrome testing is now performed by BOBs analysis.

### Statement regarding Measurement Uncertainty (MU)

Measurement Uncertainty is determined for each measurement procedure in the examination phase used to report measured quantity values on patients' samples. This is determined during verification of this assay for service introduction; creation of laboratory standard operating procedures (SOP) and interpretation of the results.

Where examinations include a measurement step but do not report a measured quantity value, the laboratory calculates the uncertainty of the measurement step where it has utility in assessing the reliability of the examination procedure or has influence on the reported result.

Estimates of measurement uncertainty are regularly reviewed and are available upon request to laboratory users.

**Leukaemia (Rapid Acute) DNA and RNA NGS Panel / Myeloproliferative Neoplasm NGS Screening Panel**

This NGS assay allows for rapid generation of comprehensive profile of variants (both DNA and RNA) from a single NGS run. This assay can profile both DNA and RNA targets including DNA mutations and translocations detected from RNA targets and allows for simultaneous interrogation of 45 DNA target genes and 30 RNA fusion driver genes. The broad fusion panel enables sequencing of over 700 unique fusion transcripts. The panel covers relevant targets for acute myeloid leukaemia, myelodysplastic syndromes and myeloproliferative neoplasms, including CML, CMML and JMML. Among the targets are Calreticulin (CALR), JAK2, MPL and NPM1, which were previously offered as individual tests. Requires patient informed consent.

**TAT: 3 days / 1 week**

<b>ALRP (DNA &amp; RNA)</b>	<b>£717.00</b>
<b>MPNS (DNA)</b>	<b>£551.50</b>

**A** (3mL minimum) or bone marrow aspirate sample

**Leukaemia / Lymphoma RNA Sequencing (Fusion Gene and SNV/Indel) Panel**

The Leukaemia / Lymphoma RNA Sequencing panel is an Anchored Multiplex PCR (AMPTM)- based next-generation sequencing (NGS) panel to detect and identify fusions, point mutations and expression levels from ribonucleic acid (RNA) input. The panel encompasses targets in over 199 genes relating to lymphoid and myeloid malignancies. By using gene-specific primers to amplify into molecular barcodes ligated onto the cDNA fragment ends, both known and novel fusions can be identified. Requires patient informed consent.

**TAT: 2 weeks**

<b>PHFP</b>	<b>£937.50</b>
-------------	----------------

**A**

**Lysosomal Storage Disorders NGS Panel – full gene sequencing**

This is a 55 gene custom NGS panel which can be used to detect both pathogenic SNP/ Indels and copy number variants (including whole exon insertions / deletions) which cause the various Lysosomal storage disorders. All known lysosomal storage diseases are covered on this panel including: Fabry disease, Gaucher disease, Pompe disease, metachromatic leukodystrophy, all the different mucopolysaccharidoses, fucosidosis, Krabbe disease, Tay-Sachs disease, Sandhoff disease, Danon disease, lysosomal acid lipase deficiency, Niemann-Pick disease types A, B and C, lipfuscinosis, prosaposin deficiency and Salla disease. Requires patient informed consent.

**TAT: 4-6 weeks**

<b>LSDS</b>	<b>£937.50</b>
-------------	----------------

**A A** <sup>9</sup>

**Myeloid Gene Panel**

This is a 75 gene targeted NGS panel for acute myeloid leukaemia, myeloproliferative neoplasms, myelodysplastic syndromes, and also contains a number of targets which are useful for lymphoid malignancies (ALL and lymphoma). It uses Anchored Multiplex PCR (AMPTM) chemistry which enables deep strand-specific amplification of molecular barcoded DNA fragments for sequencing. Requires patient informed consent.

**TAT: 2 weeks**

<b>MVPS</b>	<b>£661.50</b>
-------------	----------------

**A** (3mL minimum) or bone marrow aspirate sample

## SNP Array CGH testing

Chromosome abnormalities can be associated with developmental delay, autism spectrum disorder, learning difficulties, dysmorphic features and other congenital abnormalities. Array CGH can detect smaller genetic changes than is possible by conventional karyotyping and can provide accurate information on the size and possible consequences of the gains (duplications) or losses (deletions) identified. Multiple studies have shown that Array CGH, when applied to appropriate patients, will detect up to three times more pathogenic chromosome imbalances than karyotyping due to its greater precision and sensitivity. SNP (Single Nucleotide Polymorphism) arrays enable low-level mosaicism visualisation, loss of heterozygosity (LOH) and UPD detection, copy number change confirmation, triploidy detection and parent-of-origin analysis.

Array CGH testing is now considered to be the front line test for patients presenting with developmental delay (motor or growth), autism spectrum disorder, moderate to severe learning difficulties, dysmorphic features, with or without congenital abnormalities. Consortia in the USA and many EU countries have adopted Array CGH as the front line test in this patient cohort.

Array CGH is now more frequently used for prenatal studies as an adjunct or replacement for conventional cytogenetic studies, particularly where structural fetal abnormalities are seen at ultrasound scan but also at a patient's or doctor's request. The technique may also be utilised as a follow up test to characterise anomalies detected by a previous study (e.g. an apparently balanced de novo rearrangement or marker chromosome).

Further information is provided by the UNIQUE website at [www.rarechromo.org](http://www.rarechromo.org)

### When to use SNP Array?

In postnatal cases, patients should present with one or more of the following:

- Mental retardation
- Developmental delay
- Autism/autism spectrum disorder
- Dysmorphic features
- Congenital malformations

In prenatal cases, patients may present with:

- Abnormalities or increased nuchal translucency on ultrasound scan which may be associated with a chromosome imbalance.

Approximately 10-20% of results identify extra or missing DNA which may or may not be relevant to the clinical phenotype, and will require further family studies to assist with interpretation.

### What can SNP Array detect?

Deletions and duplications with greater sensitivity than conventional karyotyping and loss of heterozygosity (LOH).

### What does SNP Array not detect?

- Balanced chromosome rearrangements such as translocations or inversions. The chromosome location of duplications (this would require additional FISH testing).
- Fragile X syndrome, genetic diseases caused by point mutations or multifactorial inheritance.

TEST	CODE	SAMPLE REQS	TAT	PRICE
<b>Postnatal SNP Array CGH</b>	<b>CGH</b>	<b>A H<sup>9</sup></b>	10 days	£822.50

Blood from both parents may also be provided in case of follow up studies.

TEST	CODE	SAMPLE REQS	TAT	PRICE
<b>Prenatal SNP Array CGH</b>	<b>CGH</b>	<b>Amniotic fluid, CVS or POC<sup>9</sup></b>	10 days	£822.50

EDTA and heparin blood from both parents should be provided at the time of prenatal sampling, if possible, in case of follow up studies.

### Pan-ethnic carrier screening

The Fulgent Beacon carrier panel is a comprehensive genetic screen for people of all ethnic backgrounds. The panel analyses more than 400 genes, in which mutations may cause over 440 different recessive disorders. Testing includes Cystic Fibrosis, Sickle Cell Disease, Thalassaemia and Spinal Muscular Atrophy. These conditions vary in morbidity, mortality and treatment.

The Beacon carrier screen can also be filtered to report only on diseases common to the Jewish population – such as Bloom Syndrome, Canavan Disease, Gaucher Syndrome and Tay-Sachs Disease.

#### Indications for use

- Pre-pregnancy screening for couples that wish to check if they are silent carriers for a disease that would have serious implications for the future health of any children.
- For patients who are concerned about a family history of a particular disease, where common mutation detections are very high – such as Tay-Sachs Disease.

The report comes with a synopsis of any diseases for which a mutation was found, including prognosis, treatment and mode of inheritance. It includes a risk assessment and recommendations for further testing.

A full list of diseases covered by this test is available from the laboratory.

Male patients will not be screened for X-linked conditions. If an X-linked condition is suspected in a male patient please contact the laboratory or a genetics specialist about diagnostic testing for that particular condition.

#### Limitations

A normal result does not rule out the possibility that the patient carries a rare mutation not detectable by this particular assay. For this reason, this test is also not appropriate to use as a direct prenatal screen (both parents must be confirmed carriers for a particular disease before we can offer prenatal diagnosis). Screening is not designed to detect somatic mutations.

## Non-invasive prenatal testing (NIPT)

Non-invasive prenatal testing (NIPT) screens for the presence of specific chromosome disorders in the developing fetus. The test analyses fragments of cell-free DNA in maternal plasma that have been released from both maternal and placental cells.

By analysing the proportions of cell-free DNA fragments derived from different chromosomes or chromosome regions, NIPT can screen for the presence or absence of specific chromosome disorders.

NIPT is more accurate than first trimester maternal serum screening and ultrasound in identifying pregnancies with or without these disorders.

TDL Genetics uses the NIPT assay VeriSeq NIPT Solution v2, which is manufactured by Illumina and is processed at our laboratory in London.

### Targeted screening for specific common chromosome disorders

Our NIPT assay is designed to screen for:

- Trisomy 21 (Down syndrome), which is associated with moderate to severe intellectual disability, congenital heart defects and other malformations;

- Trisomy 18 (Edwards syndrome) and trisomy 13 (Patau syndrome), which are associated with severe brain and cardiac malformations. There is a high risk of stillbirth or death during infancy; and
- Sex chromosome aneuploidy (abnormalities in the number of X or Y chromosomes), which can be associated with malformations and infertility, Turner syndrome (45,X) and Klinefelter syndrome (47,XXY). Triple X syndrome and XYY syndrome can also be detected. This screen is optional (no additional cost).

In addition, NIPT can also assess fetal sex. This is optional (no additional cost).

NIPT does not screen for non-chromosome disorders, familial mutations, malformations, fetal growth or fetal viability.

### Accuracy of NIPT

NIPT provides fewer false-positive and false-negative results than combined first trimester screening for trisomy 21, 18 and 13.

It is important to note that NIPT is a screening test and does not provide a definitive genetic diagnosis, as NIPT cannot differentiate potential chromosome differences between the placenta and fetus.

## TDL Genetics

A definitive genetic diagnosis of the fetus requires cytogenetic analysis of either amniotic fluid or chorionic villus sampling (CVS).

### When to perform NIPT

NIPT should not be performed before a gestational age of 10 weeks. However, it is suitable at any time after that, preferably while there is sufficient time for further investigation or decision-making (should this be required). An ultrasound scan is required prior to NIPT to confirm dates and fetal viability, and to check for twins. Performing first trimester screening before NIPT may provide supplementary information regarding the status of the fetus.

### Who is eligible for NIPT?

Eligible patients:

- Women who are at least ten weeks pregnant
- Women with singleton or twin pregnancies
- Women with IVF pregnancies and non-IVF pregnancies

NIPT is not suitable for patients with:

- Recent maternal blood transfusion (within the last 4 months)
- Maternal mosaicism
- Maternal prior organ transplant/stem cell transplant
- Maternal copy number variations
- Chromosomal copy number variations
- Fetoplacental mosaicism/confined placental mosaicism
- Maternal autoimmune disease excluding IVIg treatments
- Maternal neoplasms (benign and malignant)
- Pregnancies with fetal demise/vanishing twin

Patients with a twin pregnancy are not eligible for the sex chromosome aneuploidy component of the screen.

### Reporting results

Results will be ready within 2–4 business days upon receipt of sample in the laboratory.

TDL first checks that there is sufficient cell-free fetal DNA in the maternal sample and quality data to provide an accurate assessment. A re-collection may be recommended if the sample is not suitable or an assessment may not be feasible.

The report then summarises the screening assessment for each disorder specified by the requesting doctor (see example below).

#### Example report

Chromosome	Result	Recommendation
<b>Trisomy 21</b>	<b>HIGH PROBABILITY</b>	Genetic counselling and additional testing
<b>Trisomy 18</b>	Low probability <1:10,000	Review result with patient
<b>Trisomy 13</b>	Low probability <1:10,000	Review result with patient
<b>Sex chromosome aneuploidy</b>	Not requested	---
<b>Fetal sex</b>	Male	Review result with patient

A high probability NIPT result should always be confirmed by amniocentesis or CVS before making any decision regarding subsequent management of the pregnancy.

### Limitations of NIPT

The VeriSeq NIPT Solution v2 is not validated for use in pregnancies with more than two fetuses, fetal demise, mosaicism, partial chromosome aneuploidy, triploidy, translocations, maternal aneuploidy, transplant or malignancy. VeriSeq NIPT Solution v2 does not detect neural tube defects. Certain rare biological conditions may also affect the accuracy of the test.

## TDL Genetics

For twin pregnancies, HIGH PROBABILITY test results apply to at least one fetus; male test results apply to one or both fetuses; female test results apply to both fetuses. Due to the limitations of the test, inaccurate results are possible.

A LOW PROBABILITY result does not guarantee that a fetus is unaffected by a chromosomal or genetic condition. Some non-aneuploid fetuses may have HIGH PROBABILITY results. In cases of HIGH PROBABILITY results and/or other clinical indications of a chromosomal condition, confirmatory testing is necessary for diagnosis.

### If an assessment cannot be provided

On rare occasions, NIPT is unable to provide an assessment of the probability of specific chromosome disorders. This usually reflects the complex biology of genetics and pregnancy, and is not due to a failing in the laboratory.

If NIPT cannot provide a specific assessment after a repeat blood draw, it is not worth repeating the NIPT (unless advised by the laboratory). A decision about other tests (maternal serum screening, detailed ultrasound, amniocentesis or CVS) should be based on the doctor's assessment of all risk factors identified, and may require specialist consultation.

## In-vivo Tests

All *in-vivo* tests (except Glucose Challenge Test/Mini-GTT) require an appointment. Please email [phlebotomy@tdlpathology.com](mailto:phlebotomy@tdlpathology.com) or call **020 7307 7373** for details, information for patient preparation, and appointment times. Sample taking fees for Extended tests are charged at £90.00 per visit.

### Extended Testing

- 50g liquid glucose is consumed for the glucose challenge test/Mini-GTT.
- 75g liquid glucose is consumed for all other glucose tests.
- Each sample tube must be labelled with time of collection.

### Glucose tolerance tests

Turnaround times are from the point at which samples are entered into TDL's laboratory information management systems, and provide a guide for the issue of results. Some tests are run in laboratory departments that do not operate at weekends.

# Therapeutic Drug Assays

There are three different collection times for Therapeutic Drug Monitoring:

- **Trough Level:** Blood should be collected just before the next dose. Trough Levels check that the appropriate drug concentration is being maintained.
- **Peak Levels:** Sample collection time is dependent on specific drug type and method of administration. Peak levels check that the drug level is not in the toxic range.
- **Suspected Toxicity:** Blood can be collected any time.

All collections should have the following noted on the request form:

- Dosage schedule including the amount and frequency and time of the last dose
- Time of specimen collection
- Clinical status of patient (e.g. routine, suspected toxicity)
- Name(s) of other drugs being taken by the patient

<b>Total IgE</b>	IGE	<b>B</b>	1 day	£60.00
<b>Tryptase</b>	STRY	<b>B</b>	2 days	£157.50

Turnaround times are from the point at which samples are entered into TDL's laboratory information management systems, and provide a guide for the issue of results. Some tests are run in laboratory departments that do not operate at weekends.

## Allergy

### Component testing

Using ImmunoCAP Allergen Components can help refine the understanding of sensitisation, by assessing a person's sensitisation pattern at the molecular level. When used in conjunction with traditional extract-based IgE testing, these provide information at the individual component level.

For more information, please contact the Immunology Department on **020 7025 7917**.

## Allergy

### Allergy Profile 1 (Food & Inhalants)

**Total IgE** with individual IgE allergens for:

**Grass Mix, inc.:** Cocksfoot, Meadow fescue, Meadow, Rye, Timothy

**Weed Mix, inc.:** Common ragweed, Giant ragweed, Western ragweed

**Dust Mix, inc.:** Blatella germanica, Dermatophagoides pteronyssinus, Dermatophagoides farinae, Hollister-Stier Labs

**Mould Mix, inc.:** A. alternata, Aspergillus fumigatus, Candida albicans, Cladosporium herbarum, Helminthosporium halodes, Penicillium notatum

**Tree Mix, inc.:** Box elder, Common silverbirch, Hazel, Oak, London plane, Maple, Sycamore

**Single Allergens (19):** Beef, Bermuda grass, Cat dander, Clam, Common silver birch, Cow's milk, Crab, Dog dander, Egg white, Egg yolk, Fish (Cod), Hazelnut, Horse dander, Latex, Nettle, Peanut, Shrimp/Prawn, Soya bean, Wheat

**TAT: 2 days**

1A £578.50

**B B**

### Allergy Profile 2 (UK Aero Allergen)

**Total IgE** with individual IgE allergens for:

Alternaria	Derma farinae
Aspergillus	Dog dander
Birch pollen	House dust mite
Cat dander	Horse dander
Cladosporium	Timothy grass
Common ragweed	

**TAT: 2 days**

2A £319.00

**B B**

### Allergy Profile 3 (Food)

**Total IgE** with individual IgE allergens for:

Codfish	Egg yolk	Sesame
Cow's milk	Kiwi	Soya
Egg white	Peanut	Wheat

**TAT: 2 days**

3A £289.00

**B B**

### Allergy Profile 4 (Nuts & Seeds)

**Total IgE** with individual IgE allergens for:

Almond	Peanut	Pumpkin seed
Brazil nut	Pecan	Sesame seed
Cashew	Pine nut	Sunflower seed
Hazelnut	Pistachio	Walnut
Macadamia nut	Poppy seed	

**TAT: 2 days**

4A £409.00

**B B**

### Allergy Profile 5 (Children's Panel)

**Total IgE** with individual IgE allergens for:

Cat dander	Egg white	Soya bean
Cod	Egg yolk	Timothy grass
Cow's milk	Hazelnut	Wheat flour
Dog dander	Peanut	
Dust mite	Silver birch	

**TAT: 2 days**

5A £289.00

**B B**

## Allergy

### Allergy Profile 6 (Shellfish)

**Total IgE** with individual IgE allergens for:

Clam	Lobster	Scallop
Crab	Octopus	Squid
Crawfish/Crayfish	Prawns/Shrimp	

**TAT: 2 days**

**6A** £260.00

**B B**

### Allergy Profile 7 (Finfish)

**Total IgE** with individual IgE allergens for:

Codfish	Sardine/Pilchard	Swordfish
Mackerel	Salmon	Tuna
Plaice	Sole	

**TAT: 2 days**

**7A** £260.00

**B B**

### Allergy Profile 8 (Cereal – singles)

**Total IgE** with individual IgE allergens for:

Barley	Rye
Oat	Wheat

**TAT: 2 days**

**8A** £152.00

**B B**

### Allergy Profile 9 (Antibiotics)

**Total IgE** with individual IgE allergens for:

Amoxicilloyl	Pen G
Ampicilloyl	Pen V
Cefaclor	

**TAT: 2 days**

**9A** £119.00

**B B**

### Allergy Profile 10 (Insects)

**Total IgE** with individual IgE allergens for:

Common wasp –	Paper wasp
Yellow jacket	Yellow hornet
Bee	White faced hornet

**TAT: 2 days**

**10A** £185.00

**B B**

### Allergy Profile 11 (Combined Shellfish/Finfish)

**Total IgE** with individual IgE allergens for:

Cod	Scallop
Prawn/Shrimp	Squid
Salmon	Tuna

**TAT: 2 days**

**11A** £208.50

**B B**

### Allergy Profile 12 (Milk & Milk Proteins)

**Total IgE** with individual IgE allergens for:

Alpha-lactalbumin –	Goat's milk
milk proteins	Mare's milk
Beta-lactoglobulin –	Sheep's milk
milk proteins	Whey (cow and ewe)
Casein – milk proteins	
Cow's milk	

**TAT: 2 days**

**12A** £229.50

**B B**

## Allergy

### Allergy Profile 13 (Stone fruit/Rosaceae family)

**Total IgE** with individual IgE allergens for:

Almond	Pear
Apple	Plum
Apricot	Raspberry
Cherry	Strawberry
Peach	

**TAT: 2 days**

13A £229.50

**B B**

### ALEX<sup>2</sup> Allergy Test (Venous)

ALEX<sup>®</sup> Allergy Explorer rapidly tests for up to 300 allergens simultaneously and providing a comprehensive analysis, from a single sample (0.5µl). The panel of allergens includes pollen, mites, cat and dog fur, insect venoms, moulds and yeasts, food and latex, supplemented with total IgE.

**TAT: 3-4 days**

ALEX £331.00

**B** (Serum)

### ISAC Panel (Venous)

Simultaneous measurement from single sample (0.5µl) of specific antibodies to more than one hundred allergen components from more than 48 preselected allergen sources.

**TAT: 3 days**

ISAC £331.00

**B**

### Allergic Rhinitis/Asthma Profile

**Total IgE** with individual IgE allergens for:

Cat dander	Aspergillus fumigatus
Dog dander	Cladosporium herbarum
Common silver birch	Mugwort
Timothy grass	London plane
Dust mite -	Peanut
Dermatophagoides	Egg white
pteronyssinus	Cow's milk
Alternaria alternata	

**TAT: 2 days**

ALRN £309.00

**B B**

### Atopic Dermatitis/Eczema Profile (14 allergens)

**TOTAL IGE** with individual IgE allergens for:

Cod fish	Apple
Cow's milk	Dust mite -
Egg white	dermatophagoides
Soyabean	pteronyssinus
Peanut	Cat dander
Hazelnut	Dog dander
Shrimp	Timothy grass
Wheat	Common silver birch

**TAT: 2 days**

ALEC £331.00

**B B**

### Gluten Sensitivity Profile

Gluten Single IgE Allergen	Immunoglobulin A
Gliadin Antibodies (IgG)	Tissue Transglutaminase
(deamidated)	IgA (Coeliac)
HLA Tissue Typing Coeliac	
Disease – DQ2/DQ8	

**TAT: 10 days**

GLUT £369.50

**A B B**

## Allergy

### Individual allergens

Allergens, when requested individually are priced as single tests, sample 1 x **B** (up to 5 allergens).

Protein allergens are manufactured by ThermoFisher (Phadia) and are IgE specific.

#### GRASS POLLENS

Bahia grass [g17](#)  
Barley [g201](#)  
Bermuda grass [g2](#)  
Brome grass [g11](#)  
Canary grass [g71](#)  
Cocksfoot [g3](#)  
Common reed [g7](#)  
Cultivated oat [g14](#)  
Cultivated rye [g12](#)  
Cultivated wheat [g15](#)  
Johnson grass [g10](#)  
Maize, Corn [g202](#)  
Meadow fescue [g4](#)  
Meadow foxtail [g16](#)  
Meadow grass, Kentucky blue [g8](#)  
Redtop, Bentgrass [g9](#)  
Rye-grass [g5](#)  
Sweet vernal grass [g1](#)  
Timothy grass [g6](#)  
Velvet grass [g13](#)  
Wild rye grass [g70](#)

#### WEED POLLENS

Alfalfa [w45](#)  
Camomile [w206](#)  
Careless weed [w82](#)  
Cocklebur [w13](#)  
Common pigweed [w14](#)  
Common ragweed [w1](#)  
Dandelion [w8](#)  
Dog fennel [w46](#)  
False ragweed [w4](#)  
Firebush (Kochia) [w17](#)  
Giant ragweed [w3](#)  
Goldenrod [w12](#)  
Goosefoot, Lamb's quarters [w10](#)  
Japanese Hop [w22](#)  
Lupin [w207](#)  
Marguerite, Ox-eye daisy [w7](#)  
Mugwort [w6](#)  
Nettle [w20](#)  
Parietaria officinalis [w19](#)

Parietaria judaica [w21](#)  
Plantain (English), Ribwort [w9](#)  
Rape [w203](#)  
Rough marshelder [w16](#)  
Saltwort (prickly), Russian thistle [w11](#)  
Scale, Lenscale [w15](#)  
Sheep sorrel [w18](#)  
Sunflower [w204](#)  
Wall pellitory [w19](#)  
Wall pellitory [w21](#)  
Western ragweed [w2](#)  
Wormwood [w5](#)  
Yellow dock [w23](#)

#### TREE POLLENS

Acacia [t19](#)  
American beech [t5](#)  
Australian pine [t73](#)  
Bald cypress [t37](#)  
Bayberry [t56](#)  
Box-elder [t1](#)  
Cedar [t212](#)  
Cedar elm [t45](#)  
Chestnut [t206](#)  
Common silver birch [t3](#)  
Cottonwood [t14](#)  
Cypress [t222](#)  
Date [t214](#)  
Elder [t205](#)  
Elm [t8](#)  
Eucalyptus, Gum-tree [t18](#)  
European ash [t25](#)  
Grey alder [t2](#)  
Hackberry [t44](#)  
Hazel [t4](#)  
Horn beam [t209](#)  
Horse chestnut [t203](#)  
Italian/Mediterranean/Funeral cypress [t23](#)  
Japanese cedar [t17](#)  
Linden [t208](#)  
Maple leaf sycamore, London plane [t11](#)

Melaleuca, Cajeput-tree [t21](#)  
Mesquite [t20](#)  
Mountain juniper [t6](#)  
Mulberry [t70](#)  
Oak [t7](#)  
Oil Palm [t223](#)  
Olive [t9](#)  
Pecan, Hickory [t22](#)  
Peppertree [t217](#)  
Pine [t213](#)  
Privet [t210](#)  
Queen palm [t72](#)  
Red cedar [t57](#)  
Red mulberry [t71](#)  
Scotch broom [t55](#)  
Spruce [t201](#)  
Sweet gum [t211](#)  
Walnut [t10](#)  
White ash [t15](#)  
White hickory [t41](#)  
White pine [t16](#)  
Willow [t12](#)  
Virginia live oak [t218](#)

#### MICROORGANISMS

*Acremonium kiliense* [m202](#)  
*Alternaria alternata* [m6](#)  
*Aspergillus flavus* [m228](#)  
*Aspergillus fumigatus* [m3](#)  
*Aspergillus niger* [m207](#)  
*Aspergillus terreus* [m36](#)  
*Aureobasidium pullulans* [m12](#)  
*Botrytis cinerea* [m7](#)  
*Candida albicans* [m5](#)  
*Chaetomium globosum* [m208](#)  
*Cladosporium herbarum* [m2](#)  
*Curvularia lunata* [m16](#)  
*Epicoccum purpurascens* [m14](#)  
*Setomelanomma rostrata*  
(*Helminthosporium halodes*) [m8](#)  
*Malassezia spp.* [m227](#)  
*Mucor racemosus* [m4](#)

## Allergy

*Penicillium chrysogenum*

(*P. notatum*) m1

*Penicillium glabrum* m209

*Phoma betae* m13

*Rhizopus nigricans* m11

*Staphylococcal enterotoxin A* m80

*Staphylococcal enterotoxin B* m81

*Staphylococcal enterotoxin C* m223

*Staphylococcal enterotoxin TSST*

### Essential Red Cell Fatty Acids Omega-3/Omega-6

Omega-3 is the name given to a family of polyunsaturated fatty acids, which the body needs but cannot manufacture itself. Omega-3 fats are used as the building blocks for fat derived hormones such as prostaglandins and leukotrienes.

The hormones with an Omega-3 base tend to reduce inflammation, while those that have an Omega-6 base increase inflammation. In the cell membrane the competition between these two essential fats has a direct bearing on the type of local hormone produced and the level of inflammation in the cell.

The Omega-6 to Omega-3 ratio in the cell membranes is key to the development of inflammatory disorders such as rheumatoid arthritis and heart disease. Diets low in oily fish and high in grains will promote inflammation and affect good health.

The ratio of Omega-6 to Omega-3 in the West is around 15 to 1, fifteen times more Omega-6 on the cell membrane promoting inflammation. Having twice as much Omega-6 is considered by most experts to be the optimal amount but a ratio of 2:1 is not easy to produce by diet alone. Many people are aware of the health benefits of Omega-3 but the supplementation to achieve optimal health is erratic. Being able to test for Essential Red Cell Fatty Acids (Omega-6/Omega-3 ratio) identifies a person's current status and is sufficiently specific to allow an accurate supplementation recommendation to be made.

Results show the Omega Ratio with a clear recommendation for the required level of Omega Supplementation (if any) to achieve optimal levels.

# Self-collection samples

The TDL Self-Collect range of testing has been gathering increased and important attention for healthcare services. Self-collection is being adopted across different target areas of healthcare: sexual health screening, wellness testing, genetic conditions, lifestyle review, pre-operative work ups, etc. Self-collection sampling allows patients to collect samples at home, and together with Royal Mail Tracked postal returns, facilitates safe and effective delivery of samples throughout the UK to the laboratory.

As part of the ongoing development of the TDL self-collection service, the sample collection kits ensure that TDL is aligned to regulatory requirement around ISO:13485 kit manufacture and UKCA marking across the UK. This requirement for UKCA marked kits also addresses the need for clinically approved stability and comparative performance. The interest being generated for this service ensures best attention, continued development, with regular review of the repertoire, and where possible more tests will be added to the available Self-Collection list.

The TDL Self-Collect capillary blood and sample kits include a helpful range of diagnostic and screening tests. These sample collection kits are not home test kits that provide an immediate result for the patient. Samples collected at home are all returned to the laboratory for testing, using Royal Mail Tracked 24 postal services. Results are returned directly to the healthcare organisation, doctor or healthcare

professional – not to the patient. Self-Collect kits need to be UKCA marked (or dual marked with UKCA/CE) to represent the product claims that kits are being used for the collection of samples in a non-clinic setting.

The Self-Collect kit itself allows for combinations of sample types (urine, stool, swabs) – and the range of UKCA marked kits are listed on page 157. Instructions for sample collection are enclosed in each collection kit. The best results are obtained by patients who closely follow the instructions that are provided, and by collecting enough blood drops to sufficiently fill the microtainer tube(s) in their kit. A request form or specially provided tube label must be returned with the collected sample. It is exciting that the scope of this service, together with its performance and quality standards, will be revised, developed, and updated on a regular basis.

For more details relating to this service, please email [UKCAkits@tdlpathology.com](mailto:UKCAkits@tdlpathology.com)

## Self-collection samples

### Quality is key

- **Components:** verified for the specific intended use of the kit and linked to the accredited tests performed in the laboratory.
- **Instructions:** monitored for ease of use, version controlled, with regular feedback for ongoing improvement.
- **Quality:** Management of technical files, regulatory submissions and manufactured to the required ISO:13485 medical device manufacturing standards.
- **Supply:** Assembled within the UK. Both individual kit fulfilment services and larger size kit orders are available.
- **Security:** Test kits are security sealed.
- **Accompanying information:** Request forms cannot be inserted into the sealed kits. An accompanying envelope (TDL will provide) or other clearly visible method must be sent with each kit to clearly display the request form.
- **Laboratory testing:** Verified diagnostic tests performed in an ISO:15189 accredited clinical laboratory

We recommend that all healthcare organisations and healthcare professionals using our TDL Tiny™ and TDL Self-Collect kits are up to date with latest diagnostic testing guidelines and relevant updates, including but not limited to those published by:

- UKHSA Standards for Microbiology Investigations (SMI)
- British Association of Sexual Health and HIV Guidelines (BASHH)
- Royal College of Obstetrics and Gynaecology Guidelines (RCOG)
- NICE Evidence-based recommendations on faecal immunochemical tests (DG30)
- British Society of Haematology Evidence Based Guidance (BSH)
- Association of Clinical Biochemistry (ACB)

## Self-collection samples

### TDL's range of kits

#### Respiratory virus PCR

KIT CODE	KIT TYPE	SAMPLE TYPE
KT293	Respiratory Virus Swab Collection Kit (2mL)	Oropharyngeal and Nasal swab

# Cervical Screening

The cervical cytology laboratory provides a rapid service for liquid based cervical samples.

Human papilloma virus (HPV), Chlamydia and Gonorrhoea testing is carried out routinely from ThinPrep vials and can be requested at the time the cervical sample is taken.

## Laboratory hours

The laboratory department is open 8.00am to 6.00pm. Out-of-hours results are available on 020 7307 7373.

## Urgent samples

It is helpful if requests for urgent samples can be discussed with the Senior Management Team prior to sending. Please contact the laboratory on [cytology.reporting@tdlpathology.com](mailto:cytology.reporting@tdlpathology.com) in the first instance.

## Use of service/Information required

Request forms must include 3 patient identifiers (this can be patient's full name, date of birth, hospital number or reference number). Samples will not be processed without a request form. TDL Request Forms do not include the information required for NHS requests for cervical cytology and should not be used for NHS requests. For further information on NHS requests please contact [hsl.csl.queries@nhs.net](mailto:hsl.csl.queries@nhs.net).

**Appropriate clinical information providing previous treatment/histological diagnosis is essential to ensure correct management recommendations can be given in the patient report. Tick boxes are provided to assist you.**

The specimen container must be clearly labelled with patient details. Forms and samples which are mismatched will result in the sample being returned to the sender for correction.

Sample takers are requested to check the expiry date of the vial prior to taking the sample. The laboratory are unable to process samples if the expiry date has passed.

## Clinical advice

The Consultant Cytopathologists and the Consultant Biomedical Scientist work together to provide clinical and technical advice, including recommendations for follow-up, HPV testing and management of complex cases. TDL will provide recommendation for patient management, but not undertake to provide a direct referral. No result will be entered onto the NHS CSP database and will therefore not be part of an individual's NHS screening record. Failsafe and management of the patient and their follow up, including referral for colposcopy where indicated, would need to be arranged by their referring clinician. To contact the department directly, please call 020 7307 7387 or email [cytology.reporting@tdlpathology.com](mailto:cytology.reporting@tdlpathology.com).

## Cervical Screening

### RECORD...

...the patient's 3 identifiers to include date of birth on the vial, and the patient information and medical history on the cytology requisition form. TDL Request Forms do not include the information required for NHS requests and should not be used for NHS requests.

### OBTAIN...

...an adequate sample from the cervix using a Cervex Brush (broom-like device). Insert the central bristles of the brush into the endocervical canal deep enough to allow the shorter bristles to fully contact the ectocervix. Push gently and rotate the brush in a clockwise direction five times.

### RINSE...

...the Cervex Brush immediately into the PreservCyt Solution vial by pushing it into the bottom of the vial 10 times, forcing the bristles apart. As a final step, swirl the brush vigorously to further release material. Visually inspect the Cervex Brush to ensure that no material remains attached. Discard the brush.

**Do not leave the head of the Cervex Brush in the vial. Check the vial is in date before use.**

### TIGHTEN...

...the cap so that the black torque line on the cap passes the black torque line on the vial. Do not over-tighten.

### PLACE...

...the vial and request form in a specimen bag for transportation to TDL.

## Cervical Screening

### ThinPrep® PAP Test Cervex Brush Protocol

#### Prepare all equipment before starting the procedure

- Note expiry date on sample collection vial. Do not use expired vials. Samples received in an expired vial will not be processed.
- Ensure the entire plastic seal is removed from the lid of the vial and discarded.
- Complete patient details on both the request form and the vial. Specimens may be returned or discarded if details are missing from the vial.
- Remove the lid from the vial before taking the sample.
- Use of lubricant is not recommended.

#### DO

- If excessive mucus is present, this should be gently removed before sampling.
- Use either the Cervex Brush (broom-like device) on its own or in combination with an endocervical brush.
- The Cervex Brush should be rotated 5 times in a clockwise direction. The Plastic spatula should be rotated through 360 degrees and the endocervical brush rotated through one quarter to one half turn.
- Immediately rinse the collected material into the vial.
- Replace the lid and tighten so that the black torque line on the cap passes the black torque line on the vial to avoid leakage.
- Keep the unlabelled portion of the sample vial free of labels so that the contents can be seen.
- If barcoded labels are used these must be applied horizontally around the vial.
- Samples should be sent to the laboratory without delay.

#### DON'T

- DO NOT leave the head of the Cervex Brush in the vial.
- DO NOT routinely clean the cervix or take a cervical swab before taking a cervical sample.
- An endocervical brush should never be used in isolation.
- DO NOT under any circumstances use a wooden spatula.
- DO NOT leave the collection device sitting in the vial whilst dealing with the patient.
- DO NOT over-tighten the lid on the vial.
- DO NOT place multiple labels on the outside of the vial.
- DO NOT apply barcoded labels vertically on the vial.
- DO NOT use expired vials.
- DO NOT delay the sending of vials to the laboratory. The sample needs to be processed within 6 weeks of collection.
- DO NOT use excessive lubricant – please avoid if possible.

## Cervical Screening

### Gynaecological Samples

The Cytology department processes cervical samples directly referred from all sectors of practice – Health screening, Occupational health, GP's, Consultants, Colposcopy units, Clinics, Hospitals and other Laboratories.

Liquid Based Cytology (LBC) is processed using the Hologic ThinPrep system.

Information for sample takers is available by contacting the department. Important: the head of the cervical broom must NOT be left in the vial. The use of lubricant interferes with LBC sampling and may result in an inadequate sample. Use of

lubricant is NOT recommended as it can affect the processing quality of the sample. Supplies of ThinPrep vials are available by contacting the Laboratory Service Centre on 020 7307 7373.

### STI Screening from Hologic Thin Prep Vial

Tests are priced individually. Please request tests individually. Requests for additional test can be made by contacting the laboratory by telephone on **020 7307 7373** or by email to **addons@tdlpathology.com**.

### Infection by PCR (single tests)

## Cervical Screening

### Human papillomavirus (HPV)

Human papillomavirus (HPV) is a common virus which infects the skin and may be transmitted through sexual contact. There are over 200 types of HPV which are split into two groups depending on whether they are linked to an increased risk of cervical cancer. These are described as high risk HPV subtypes or low risk HPV subtypes.

Infection with a high-risk HPV (hrHPV) has been established as a necessary cause of cervical cancer. This has led in recent years to the inclusion of hrHPV testing as an adjunct to cervical cytology in organised cervical screening programmes.

Compared to cervical cytology, hrHPV testing has been shown to reduce the risk of developing cervical cancer through increased sensitivity. The high negative predictive value of hrHPV testing and lower false negative rate provides assurance to woman and clinicians that the risk of developing cervical cancers between screening tests, is rare.

#### What does this change mean?

It means that HPV testing is the **FIRST LINE TEST**. It will be carried out as a single test, with a single result reported as Detected/Not Detected.

- If HR-HPV is **NEGATIVE** (Not Detected) – this means no further testing is needed for your patient and they may return to Routine Recall.
- If HR-HPV is **POSITIVE** (Detected) – this means that **CYTOLOGY** will be processed from the same ThinPrep Vial.

#### **A further specimen is not required.**

Patient recall (management) will be determined by the individual screening history and current test results.

All TDL requests for HPV are processed as follows:

- If HPV is requested as a single test and the result is Negative/Not Detected, cervical cytology (PAPT) would only be processed if specifically requested. Should HPV and PAPT be undertaken, there would be a charge for both the HPV and the PAPT.
- If the HPV result is HR-HPV Detected, cervical cytology (PAPT) will be processed, even if the PAPT has not been requested. The PAPT will not be charged.

### Understanding the significance of HPV testing

The benefit of a negative HPV result is its negative predictive value (NPP). A negative HPV result indicates that a patient is a very low risk of developing cervical disease. However neither HPV testing not negative cervical cytology are able to reduce the risk to zero. The negative predictive value of both DNA and mRNA testing is the same.

## Cervical Screening

**Requests for Cervical Cytology as a single test are no longer processed without testing for HPV. In these circumstances, the HPV test will be charged in addition to the Cervical Cytology. Requests for HPV as the PRIMARY TEST will reflex to Cervical Cytology if HR-HPV is Detected/Positive at no additional charge.**

### Requests for HPV Primary Screening as a single test

TEST	CODE	SAMPLE REQS	TAT	PRICE
<b>HPV (A group of 14 HR mRNA types)</b>	<b>HPVH</b>	<b>TPV</b>	3 days	£73.50

If HR-HPV is DETECTED/POSITIVE, cervical cytology (PAPT) will be processed **without charge**. The PAPT will be processed from the same vial.

### Requests for HP20 as a single test

TEST	CODE	SAMPLE REQS	TAT	PRICE
<b>HPV (28 individually typed LR &amp; HR DNA subtypes)</b>	<b>HP20</b>	<b>TPV</b>	3 days	£115.00

HPV low and high risk DNA subtypes will be reported individually (9 low and 19 high risk). If High Risk DNA subtypes are positive then Cervical Cytology (PAPT) using the same vial will be processed **without charge**.

### Requests for HPVT as a single test

TEST	CODE	SAMPLE REQS	TAT	PRICE
<b>HPV (28 individually typed low risk (LR) &amp; high risk (HR) DNA subtypes and reflexed mRNA for types 16, 18, 31, 33 and 45)</b>	<b>HPVT</b>	<b>TPV</b>	5 days	£146.00

If one or more of DNA types 16, 18, 31, 33, 45 are DETECTED/POSITIVE, reflex testing for expression of E6/E7 oncogenes will be undertaken and Cervical Cytology (PAPT) will be processed **without charge**. The PAPT will be processed from the same vial.

### Requests for Cervical Cytology (PAPT)

TEST	CODE	SAMPLE REQS	TAT	PRICE
<b>Cervical Cytology</b>	<b>PAPT</b>	<b>TPV</b>	6 days (combined report)	£88.00
<b>Cervical Cytology + HPVH</b>	<b>PAPT + HPVH</b>	<b>TPV</b>	6 days (combined report)	£161.50

If PAPT is requested as a single test, HR-HPV will be undertaken additionally, and a combined report will be issued. **PAPT and HPVH will be charged as two separate tests.**

### Requests for Cervical Cytology (PAPT) with selected HPV (HPVH or HP20 or HPVT)

TEST	CODE	SAMPLE REQS	TAT	PRICE
<b>Cervical Cytology + HPVH</b>	<b>PAPT + HPVH</b>	<b>TPV</b>	6 days (combined report)	£161.50
<b>Cervical Cytology + HP20</b>	<b>PAPT + HP20</b>	<b>TPV</b>	6 days (combined report)	£203.00
<b>Cervical Cytology + HPVT</b>	<b>PAPT + HPVT</b>	<b>TPV</b>	6 days (combined report)	£234.00

Where HPV result is reported with Cervical Cytology, a recommendation for patient management will be given, based on the combined findings.

# Self-collection HPV samples

## TDL Self-Collection HPV Test

Human Papillomavirus (HPV) is the primary cause of nearly all cervical cancer. In most cases, the HPV virus is harmless and causes no symptoms. Most women who acquire HPV are able to clear the infection through their own immune systems. Persistent presence of high-risk types of HPV can cause cervical lesions which over time may develop into cancer if untreated. Testing for HPV determines the presence, or absence, of HPV and will determine whether the HPV type present is high risk for CIN and cervical cancer.

The Self-Collection HPV Test provides women with the option to self-collect a vaginal specimen that is then sent to the laboratory for testing. There is well documented high level of concordance between the HPV DNA results from self-collected and clinician-collected specimens.

The Self-Collection HPV Test is validated, using a CE marked sample collection device for vaginal cell collection. This sample is then sent to the laboratory for processing for 19 high risk HPV DNA subtypes. A negative result means that these high-risk subtypes HPV were not detected and the patient is at extremely low risk of developing high-grade cervical disease/CIN2+ before their next routine visit.

A positive HPV result might indicate an increased risk of developing CIN/cervical cancer, and the report from the laboratory will provide a clear recommendation for follow-up/colposcopy.

The value of HPV DNA testing in cervical cancer screening and disease detection has been proven over and over again. Self-collection of specimens for HPV testing is not intended to replace existing patient management pathways but allows for:

- Those who wish to test following a change of sexual partner
- Option for identifying individual high risk DNA subtypes
- Personal preference to self-collect vaginal samples
- An acceptable option for women who avoid having regular cervical smears
- Self-collection for HPV increases acceptability and coverage rate of cervical cancer prevention

Results will always be sent to the requesting clinician, clinic or healthcare organisation.

### HPVY

Self-Collected HPV DNA incorporating a collective of high risk subtypes.

### HPVZ

Self-Collected HPV DNA with **individual** reporting of all High Risk subtypes (16, 18, 31, 33, 45, 35, 39, 51, 52, 56, 58, 59, 66, 68, 26, 53, 69, 73, 82).

For more information, or to order Self-Collection HPV Test Packs, please contact Annette Wilkinson on **020 7307 7373** or [annette.wilkinson@tdlpathology.com](mailto:annette.wilkinson@tdlpathology.com)

TEST	CODE	SAMPLE REQS	TAT	PRICE
<b>HPV (19 high risk DNA subtypes, reported as types 16, 18 or Others) (Self-collect)</b>	HPVY	Qvintip vaginal swab	3 days	£73.50
<b>HPV (Individually typed high risk DNA subtypes) (Self-collect)</b>	HPVZ	Qvintip vaginal swab	3 days	£115.00

# Non-Gynae Cytology

## Non-Gynaecological Cytology

### Cerebrospinal fluid (CSF)

Ideally CSF should be submitted fresh or as an air dried cytospin slide, unstained and in a plastic transport slide box. A minimum of 3mls should be submitted either in fresh form or spun on multiple slides for cytopathologists' review and opinion. Please contact TDL Cytology for advice if required on 020 7307 7323 /7373.

### Fluids

All available material should be submitted in a sterile container without fixative as quickly as possible. If any delay is anticipated, the material should be submitted in cytolyt fixative.

### Urines

To prevent cell degeneration it is advisable to collect urine samples in a sample pot containing preservative (available from TDL Supplies). Use of preservative will ensure the cellular material is preserved up to 48 hours.

### Ideally 10 mls (excluding preservative)

from a freshly fully voided urine (when the bladder is emptied) mid-morning sample should be submitted for cytological assessment. If microbiology or chemistry investigations are also required, **please submit separate urine samples** and mark the vials accordingly. A mid-stream urine sample is NOT recommended for cytological assessment as it could lead to a low cellular yield. If a delay of greater than 24 hours in reaching the laboratory is anticipated samples should be refrigerated at 4°C.

### Sputum

Sputum should be collected on at least three occasions if underlying lung carcinoma is suspected. A single sputum is sufficient for microbiological assessment. Sputum should be sent to the laboratory immediately following production, or stored in a universal container containing cytolyt cell fixative if there is a likely delay. Please note that this is only acceptable if sputum is only for Cytology. Microbiology cannot be performed on fixed material. Early morning sputum is ideal, but contamination with food, toothpaste and tobacco should be avoided.

TEST	CODE	SAMPLE REQ	TAT	PRICE
<b>Fluid Cytology</b>	CATF	<b>Fluid</b> <sup>4</sup>	3 days	£162.50
<b>Urine Cytology (Urine cytology containers available from TDL Supplies)</b>	URCY	<b>Urine</b> (30mls) <sup>21</sup>	2 days	£151.50

# Histopathology

TDL's Histopathology service supports a full range of pathology sub-specialities.

To prevent tissue degeneration, it is advisable to collect histopathology samples in sample pot(s) containing preservative, usually formalin, to at least ten times the volume of the tissue sample (available from TDL Supplies). Use of preservative will ensure that the tissue architecture and microscopic appearances of specimens are preserved.

Patient demographics, together with clinical and sample details need to be provided with the specimens. Testicular investigations for reproductive investigations are best submitted fixed in Bouins solution. Requests for products of conception require the patient's signed consent/instruction regarding sensitive disposal when the histopathology is complete. Please contact **020 7307 7380** or **020 7307 7373** for information or any query relating to histopathology.

All specimens are initially stained with H&E.

However special stains and immunohistochemistry (IHC) may be recommended if additional information is needed to provide a more detailed analysis.

The choice of stain depends on the findings on initial assessment, the clinical context and the preference of the pathologist within their specialist expertise.

IHC may be added when routine or regular histological testing is not sufficient to form a diagnosis. There are additional charges for special stains and immunohistochemistry, as below.

Special stains		Immunohistochemistry	
1SS	£26.50	1IMM	£59.00
2SS	£52.50	2IMM	£118.00
3SS	£79.00	3IMM	£176.50

# Non-invasive prenatal testing

## Non-invasive prenatal testing (NIPT)

Non-invasive prenatal testing (NIPT) screens for the presence of specific chromosome disorders in the developing fetus. The test analyses fragments of cell-free DNA in maternal plasma that have been released from both maternal and placental cells.

By analysing the proportions of cell-free DNA fragments derived from different chromosomes or chromosome regions, NIPT can screen for the presence or absence of specific chromosome disorders.

NIPT is more accurate than first trimester maternal serum screening and ultrasound in identifying pregnancies with or without these disorders.

TDL Genetics uses the NIPT assay VeriSeq NIPT Solution v2, which is manufactured by Illumina and is processed at our laboratory in London.

### Targeted screening for specific common chromosome disorders

Our NIPT assay is designed to screen for:

- Trisomy 21 (Down syndrome), which is associated with moderate to severe intellectual disability, congenital heart defects and other malformations;

- Trisomy 18 (Edwards syndrome) and trisomy 13 (Patau syndrome), which are associated with severe brain and cardiac malformations. There is a high risk of stillbirth or death during infancy; and
- Sex chromosome aneuploidy (abnormalities in the number of X or Y chromosomes), which can be associated with malformations and infertility, Turner syndrome (45,X) and Klinefelter syndrome (47,XXY). Triple X syndrome and XYY syndrome can also be detected. This screen is optional (no additional cost).

In addition, NIPT can also assess fetal sex. This is optional (no additional cost).

NIPT does not screen for non-chromosome disorders, familial mutations, malformations, fetal growth or fetal viability.

SCAN ME

Find out more about NIPT on the TDL website:

Full Blood Count* (Haemoglobin, White Cell Count, Red Cell Count, Platelets) (Self-collect) <b>NEW</b>	TFBC	<b>A</b> (TDL Tiny)	1 day	£49.00	41, 159
Fungal investigations (non-superficial extended culture)	FUN	All specimens other than Skin, Hair and Nails	3-21 days	£81.00	47
Fungal investigations (superficial/ dermatophyte PCR test)	DERM	Skin, Hair, Nails	3-7 days	£81.00	47
FXIII A Subunit	F13S	<b>C</b> (Frozen) <sup>9,18</sup>	14 days	£386.00	42
G6PD	G6PD	<b>A</b>	4 days	£101.00	43
Gabapentin	GABA	<b>B</b> <sup>4</sup>	5 days	£102.50	138
Galactomanan (Aspergillus Antigen)	SGAL	<b>B</b>	2 weeks	£165.50	47
Galactose-1-Phosphate Uridyltransferase	GAL1	<b>H</b> <sup>5,6</sup>	2 weeks	£258.00	33
Galactosidase – Alpha*	GALA	<b>J</b> *	6 weeks	£313.50	33
Gall Stone Analysis	RSTA	<b>STONE</b>	10 days	£191.00	33
Gamma GT	GGT	<b>B</b>	1 day	£28.00	33
Ganglionic Acetylcholine Receptor Antibodies	GACA	<b>B</b>	9 weeks	£119.00	84
Ganglioside GM1, GD1B, GQ1B Abs	GANG	<b>B</b>	5 days	£243.00	84
Gardnerella vaginalis (Thin Prep)	GVPC	<b>TPV</b>	2 days	£93.00	170
Gardnerella vaginalis by PCR	GVPC	<b>FCRU / PCR / TPV</b>	2 days	£93.00	72
Gastric Parietal Autoantibodies	GASP	<b>B</b>	2 days	£54.00	84
Gastrin	GAST	<b>A</b> (Plasma frozen)	5 days	£121.00	33
Gastrointestinal Pathogen Profile by PCR (Self-collect)	EORD	Stool/faecal container	2 days	£224.00	92, 159
Gaucher Disease full gene sequencing	GENE	<b>A</b> <sup>9</sup>	6 weeks	£750.00	121

Turnaround times are from the point at which samples are entered into TDL's laboratory information management systems, and provide a guide for the issue of results. Some tests are run in laboratory departments that do not operate at weekends.

## Alphabetical test index

TEST	CODE	SAMPLE REQS	TAT	PRICE	PAGE
Genetic Reproductive Profile (Male)	GRP	A H <sup>9</sup>	10-15 days	£936.50	121
Genetics: TDL Genetics					109-136
Gentamicin Assay	GENT	B <sup>4</sup>	1 day	£115.00	137
Gilbert Syndrome – common UGT1A1 repeat variation	GENE	A <sup>9</sup>	2-3 weeks	£300.00	122
Glialdin Antibodies (IgG) (deamidated) (Self-collect)	AGAB	B (TDL Tiny)	2 days	£98.50	84, 160
Glialdin Antibodies (IgG) (deamidated) (Venous)	AGAB	B	2 days	£98.50	84
Globulin (Calculated)	GLOB	B	1 day	£33.50	33
Glomerular Basement Membrane Abs	AGBM	B	2 days	£77.00	84
Glucagon	GLUG	A (Plasma)	10 days	£224.00	34
Glucose	RBG	G	1 day	£29.00	34
Glucose Challenge Test/Mini-GTT	RBGM	G	1 day	£33.50	137
Glucose Tolerance Test (Extended Plus)	GTTX	7 x G, 7 x RU	1 day	£294.00	137
Glucose Tolerance Test (Extended)	GTTE	5 x G, 5 x RU	1 day	£262.50	137
Glucose Tolerance Test (Short)	GTTS	2 x G, 2 x RU	1 day	£102.50	137
Glucose Tolerance Test/OGTT	GTT	3 x G, 3 x RU	1 day	£160.00	137
Glucose Tolerance with Growth Hormone	GTT + GHDF	3 x B <sup>35</sup> , 3 x G, 3 x RU	1 day	£266.50	137
Glucose Tolerance with Insulin	GTTI	3 x B, 3 x G, 3 x RU	1 day	£398.00	137
Glucose-6-Phosphate Dehydrogenase (G6PD) Deficiency – full G6PD gene sequencing	GENE	A <sup>9</sup>	3-4 weeks	£700.00	122
Glutamic Acid Decarboxylase Antibodies (GAD 65)	GAD	B	5 days	£161.00	84
Gluten Sensitivity Evaluation	GSA	B	2 days	£170.00	84
Gluten Sensitivity Profile	GLUT	A B B	10 days	£369.50	84, 89, 141, 146
Gluten/Coeliac Genetic Profile 2	GSA2	A B	10 days	£357.00	84
Glycan Determinants	ZZ27	B	2 days	£70.50	142
Glycogen storage disease type 2 (Pompe) variant analysis	POMP	A	4 weeks	£1,037.50	122
Gonorrhoea – PCR swab	SGON	PCR	2 days	£80.00	72
Gonorrhoea – Thin Prep	TGON	TPV	2 days	£93.00	72, 170
Gonorrhoea – Urine	CGON	FCRU	2 days	£80.00	72
Gonorrhoea Culture – Cervix	GONC	CS <sup>+++</sup>	3-5 days	£81.00	47, 72
Gonorrhoea Culture – Other site	GONO	CS	3-5 days	£81.00	47, 72
Gonorrhoea Culture – Rectal	GONR	CS	3-5 days	£81.00	47, 72
Gonorrhoea Culture – Throat	GONT	CS	3-5 days	£81.00	47, 72
Gonorrhoea Culture – Urethral	GONU	CS	3-5 days	£81.00	47, 72
Granulocyte Immunology	GRIM	A A (or 2 x 6ml) B	2 weeks	£448.00	84
Group B Strep – Vaginal and Rectal (Self-collect)	GBSX	Blue gel Amies swab x2	3-5 days	£55.00	47, 160
Group B Strep – Vaginal and Rectal (STM)	GBSX	2 x STM	3-5 days	£55.00	48

TB Culture (Urine)	TBUR	3 x EMU	up to 8 weeks	£189.00	49
TB PCR (PCR detection of Mycobacterium tuberculosis complex and mutations for Rifampicin resistance)	TBPC	All samples except blood cultures and urine, as clinically requested.	1 day	£199.00	49
TB Quantiferon®-TB Gold*	TBQ4	Special tubes or H <sup>1</sup>	3 days	£119.00	87

Turnaround times are from the point at which samples are entered into TDL's laboratory information management systems, and provide a guide for the issue of results. Some tests are run in laboratory departments that do not operate at weekends.

## Alphabetical test index

TEST	CODE	SAMPLE REQS	TAT	PRICE	PAGE
<b>TB Slopes – Confirmation and Sensitivity</b>	TBSL	<b>TB slope</b> (LJ medium-green) <sup>6</sup>	up to 8 weeks	£210.00	49
Tegretol (Carbamazepine)	CARB	<b>B</b>	1 day	£65.50	139
Teicoplanin Assay	TEIC	<b>B</b>	5 days	£121.00	137
Temazepam	TEMA	<b>B</b> <sup>4</sup>	4 days	£134.00	139
Testicular Tumour Profile (LDH, AFP, HCQG)	TTP	<b>B</b>	1 day	£134.00	106, 108
Testosterone (Self-collect)	TEST	<b>B</b> (TDL Tiny) or <b>F</b> (TDL Tiny)	1 day	£55.00	60, 161
Testosterone (Total), LC MS Mass Spec <b>NEW</b>	MSTT	<b>B</b>	5-7 days	£113.00	60
Testosterone (Venous)	TEST	<b>B</b>	1 day	£55.00	60
Testosterone (Free) (Self-collect)	FTES	<b>B</b> (TDL Tiny) or <b>F</b> (TDL Tiny)	3 days	£113.00	60, 161
Testosterone (Free) (Venous)	FTES	<b>B</b>	3 days	£113.00	60
Tetanus Antibody	TETA	<b>B</b>	5 days	£112.00	87, 95
TH1/TH2 Cytokine Profile	1TH2	<b>H H H</b> *	Send Mon-Thurs only	£374.50	62
TH1/TH2 Cytokine Ratio	6RF	<b>H H H</b> <sup>5</sup>	1 week	£388.00	61
TH1/TH2 Intracellular Cytokine Ratios with IVIG	21RF	<b>H H H</b> <sup>5</sup>	1 week	£650.50	61
TH1/TH2 Intracellular Cytokine Ratios with IVIG, Prednisolone	20RF	<b>H H H</b> <sup>5</sup>	1 week	£813.00	61
TH1/TH2 Intracellular Cytokine Ratios with Prednisolone	22RF	<b>H H H</b> <sup>5</sup>	1 week	£650.50	61
Thalassaemia Screen	HBEL	<b>A</b>	4 days	£106.00	43
Thallium (Blood)	THAL	<b>A</b> / <b>H</b>	1 week	£78.50	166
Thallium (Urine)	URTH	<b>RU</b>	1 week	£78.50	166
Theophylline	THEO	<b>B</b>	1 day	£57.50	139
Thiopurine Methyl Transferase	TPMT	<b>A</b> <sup>5</sup>	5 days	£151.00	37
Thrombin Time	THRO	<b>C</b> <sup>18</sup>	1 day	£35.00	42
Thrombotic Risk Profile	PROP	<b>A A B C C C</b> <sup>18</sup>	5 days	£760.00	43, 45, 128, 130
Thyroglobulin Abs	TGAB	<b>B</b>	1 day	£56.50	60
Thyroglobulin Assay	TGA	<b>B</b>	1 day	£97.00	60
Thyroid Abs (Thyroglobulin + Thyroid Peroxidase Abs) (Self-collect)	THAB	<b>B</b> (TDL Tiny)	2 days	£92.00	60, 87, 161
Thyroid Abs (Thyroglobulin + Thyroid Peroxidase Abs) (Venous)	THAB	<b>B</b>	1 day	£92.00	60, 87
Thyroid Cancer NGS Panel	GENE	<b>A A</b> <sup>9,11</sup>	4 weeks	£1,100.00	128
Thyroid Peroxidase Antibodies/Anti TPO	TPEX	<b>B</b>	1 day	£56.50	60, 87
Thyroid Profile 1 (FT4/TSH) (Self-collect)	TF	<b>B</b> (TDL Tiny)	1 day	£77.00	60, 161
Thyroid Profile 1 (FT4/TSH) (Venous)	TF	<b>B</b>	1 day	£77.00	60, 64
Thyroid Profile 2 (Venous)	TF2	<b>B</b>	2 days	£184.00	60, 64
Thyroid Profile 3 (FT3/FT4/TSH) (Self-collect)	TF3	<b>B</b> (TDL Tiny)	1 day	£109.50	60, 161
Thyroid Profile 3 (FT3/FT4/TSH) (Venous)	TF3	<b>B</b>	1 day	£109.50	60, 64
Thyroxine (T4)	T4	<b>B</b>	1 day	£50.50	60
Thyroxine Binding Globulin	TBG	<b>B</b> (Frozen)	10 days	£128.50	60
Timothy Grass Components	ZZ19	<b>B</b>	2 days	£301.50	143
Tissue for culture	TISS	<b>Tissue sample</b>	up to 14 days	£89.50	49

## Alphabetical test index

TEST	CODE	SAMPLE REQS	TAT	PRICE	PAGE
Tissue Polypeptide Antigen	TPA	<b>B</b>	1 week	£181.50	37
Tissue Transglutaminase IgA (Coeliac) (Self-collect)	TAA	<b>B</b> (TDL Tiny)	2 days	£66.50	87, 161
Tissue Transglutaminase IgA (Coeliac) (Venous)**	TAA	<b>B</b>	2 days	£66.50	87
Tissue Transglutaminase IgG	TAAG	<b>B</b>	5 days	£78.50	87
Tobramycin Assay (Provide Clinical Details)	TOBR	<b>H</b>	3 days	£216.00	137
Toluene (Blood)	TOL	<b>J</b> (Contact Referrals)	10 days	£149.00	166
Toluene (Urine)	UTOL	<b>RU</b>	10 days	£192.00	166
Topiramate (Topamax)	TOPI	<b>B</b> <sup>4</sup>	4 days	£115.00	139
Torch Screen	TORC	<b>B</b>	2 days	£198.50	103, 105
Total Acid Phosphatase	APT	<b>B</b>	5 days	£52.50	37
Total Bile Acid/Bile Salts	BILS	<b>B</b>	1 week	£85.00	37
Total IgE	IGE	<b>B</b>	1 day	£60.00	37, 141
Total Immune Function Evaluation	TIE	<b>A</b> + <b>B</b> <sup>5,10</sup>	7 days	£369.50	87
Total Immunoglobulin E	IGE	<b>B</b>	1 day	£60.00	87
Total Testosterone, LC MS Mass Spec <b>NEW</b>	MSTT	<b>B</b>	5-7 days	£113.00	60
Toxocara Antibodies (IgG)	TFAT	<b>B</b> <sup>9</sup>	5 days	£82.50	87
Toxoplasma Antibodies (IgG, IgM)	TFAM	<b>B</b> <sup>9</sup>	1 day	£82.50	87, 92
Toxoplasma Antibody Full Evaluation (IgM, Dye Test, IgG Avidity)	TDYE	<b>B</b> <sup>9</sup>	10 days	£150.00	87
Toxoplasma by PCR	TXAG	<b>A</b>	5 days	£172.00	87
TPHA	TPPA	<b>B</b>	2 days	£40.50	75, 87
Trace Metal (Blood) Profile	TRAC	<b>A</b> <b>B</b> <b>H</b> <b>K</b>	7-10 days	£313.50	165-166
Transferrin	TRAN	<b>B</b>	1 day	£86.00	37
Transferrin Electrophoresis	TREL	<b>B</b>	2 weeks	£276.00	37
Treacher Collins Syndrome and Related Disorders NGS Panel	GENE	<b>A</b> <b>A</b> <sup>9</sup>	6 weeks	£1,600.00	129
Trichinella Serology	TRIC	<b>B</b>	5 days	£103.50	87
Trichloroacetic Acid (Urine)	UTCA	<b>RU</b>	5 days	£145.00	166
Trichomonas vaginalis (Thin Prep)	TVPC	<b>TPV</b>	2 days	£93.00	170
Trichomonas vaginalis (PCR)	TVPC	<b>FCRU / PCR / TPV</b>	2 days	£93.00	75
Trichomonas vaginalis (TV) – Urine or Vaginal (Self-collect)	TVPC	Aptima urine or multisite swab	2 days	£93.00	75, 162
Triglycerides	TRI	<b>B</b>	1 day	£33.50	37
Trimethylaminuria (Fish Odour Syndrome)	FOS	<b>J</b>	6 weeks	£389.50	37
Trimipramine	TRIM	<b>A</b>	5 days	£96.00	139
Triple Swab Female STI Profile (Vaginal/Throat/Rectal Swabs) (PCR)	3SWA	PCR swab x 3 (label by site)	2 days	£165.50	75, 78
Triple Swab Female STI Profile (Vaginal/Throat/Rectal Swabs) (Self-collect)	3SWA	Aptima multisite swab x 3 (label by site)	2 days	£165.50	75, 162
Tropical Screen (from 6 weeks post-travel)	TROP	<b>B</b> <b>B</b> <sup>9,14</sup>	10 days	£229.50	92-93
Tropomyosins	ZZ31	<b>B</b>	2 days	£103.50	143

Turnaround times are from the point at which samples are entered into TDL's laboratory information management systems, and provide a guide for the issue of results. Some tests are run in laboratory departments that do not operate at weekends.

## Alphabetical test index

TEST	CODE	SAMPLE REQS	TAT	PRICE	PAGE
Troponin I (High sensitive)	TROC	B	1 day	£100.00	37
Troponin T (High sensitive)	TROT	B	1 day	£108.50	37
Trypanosome (Chagas) Antibodies	CHGA	B <sup>9,14</sup>	10 days	£151.00	88
Trypsase	STRY	B	2 days	£157.50	37, 141
TSH (Self-collect)	TSH	B (TDL Tiny)	1 day	£55.00	60, 162
TSH (Venous)	TSH	B	1 day	£55.00	60
TSH-Receptor Antibodies	TSI	B	4 days	£165.50	60, 88
Tuberous Sclerosis (TSC1 + TSC2)	GENE	A A <sup>9</sup>	7 weeks	£1,200.00	129
Tularaemia Antibodies	TULA	B <sup>14</sup>	5 days	£107.00	88
Tumour Necrosis Factor – Alpha	TNF	B (Frozen) <sup>4</sup>	2 weeks	£185.00	37
Urate (Uric acid)	UA	B	1 day	£33.50	37
Urea (Self-collect)	UREA	B (TDL Tiny)	1 day	£33.50	37, 162
Urea (Urine)	UURE	CU	1 day	£33.50	38
Urea (Venous)	UREA	B	1 day	£33.50	37
Urea and Electrolytes	U/E	B	1 day	£56.50	38, 40
Urea/Creatinine/eGFR (Self-collect)	TCU	B (TDL Tiny)	1 day	£44.50	38, 162
Ureaplasma urealyticum (Thin Prep)	UGEN	TPV	2 days	£93.00	170
Ureaplasma urealyticum by PCR	UGEN	FCRU / PCR / TPV	2 days	£93.00	75
Uric Acid (Serum)	UA	B	1 day	£33.50	38
Uric Acid (Urine)	UURI	CU	1 day	£44.50	38
Urinary Bladder Cancer Antigen	UBC	RU (Freeze within 48 hours)**	5 days	£93.00	38, 106
Urinary Methyl Histamine	UHIT	RU (Frozen)	2 weeks	£129.50	88
Urinary Tract/Renal Cancer NGS Panel	GENE	A A <sup>9,11</sup>	4 weeks	£1,100.00	129
Urine (Microscopy Only)	UMIC	RU	1 day	£52.50	49
Urine Chemistry and Microscopy (Self-collect)	UMIC	Urine (Universal). Mid stream.	1-2 days	£52.50	49, 162
Urine Chemistry, Microscopy and Culture (Self-collect)	UCEM	Urine (Universal & Boric). Mid stream.	1-2 days	£68.50	50, 162
Urine Cytology (Urine cytology containers available from TDL Supplies)	URCY	Urine (30mls) <sup>21</sup>	2 days	£151.50	174
Urine EtG (Ethyl glucuronide)	ETG	RU	1 week	£113.00	163
Urine for Extended Culture	UCXD	MSU <sup>+++</sup>	up to 7 days	£147.00	50
Urine for Microscopy and Culture	UCEM	MSU <sup>+++</sup>	1-2 days	£68.50	50
Urine Microalbumin/Creatinine Ratio	UMA	RU	1 day	£77.00	38
Urine Organic Acids	UORG	RU (Frozen)	3 weeks	£300.50	38
Urine Steroid Screen (Steroid Hormones)	USTE	CU <sup>9</sup>	2 weeks	£841.50	38
Urine Sugar Chromatography	UCRO	RU (Frozen)	3 weeks	£184.00	38
Urticaria Test (Histamine Releasing)	CURT	B	3 weeks	£171.00	88
Usher Syndrome NGS Panel	GENE	A A <sup>9</sup>	6 weeks	£1,600.00	129
Vaginitis/BV Profile (Culture & PCR)	STD8	PCR and STM	3 days	£150.00	75
Vaginitis/BV Profile using Culture & PCR Swab (Self-collect)	STD8	Aptima multisite swab and Blue gel Amies swab	3-5 days	£150.00	75, 162
Valium (Diazepam)	DIAZ	A	7 days	£109.50	139
Valproic Acid (Epilem)	VALP	B	1 day	£57.50	139

Zellweger Syndrome NGS Panel	GENE	A A <sup>9</sup>	6 weeks	£1,600.00	129
Zika Abs IgM and IgG – Antibody detection from 15 days	ZKAB	B	Up to 14 days	£129.50	88, 92, 104
Zika RNA by PCR in Semen	ZIKS	<b>Semen</b>	Up to 14 days	£318.00	88, 92, 104
Zika RT PCR – Window of detection from 1-7 days from onset of symptoms	ZIKA	B	Up to 14 days	£228.50	88, 92
Zika RT PCR – Window of detection from 1-14 days from onset of symptoms	ZIKU	RU	Up to 14 days	£228.50	88, 92
Zinc (Serum)	ZINC	K	2 days	£51.50	152, 165
Zinc (Urine)	URZN	CU	5 days	£55.00	152, 165
Zinc (Whole Blood)	RBCZ	A or H	5 days	£54.00	152
Zwig Endotest®	ENDT	Endotest saliva collection kit	25 days	£850.00	60, 129

# TDL Referral laboratories

For certain specialist tests TDL has developed a selected network of TDL Group and Reference Laboratories. These Group or specialist laboratories can be identified by a code assigned to reports. The quality of these laboratories is recognised by UKAS, or similar accrediting bodies for the laboratories outside the UK.

## TDL Referral laboratories

A3P Biomedical AB [980]

Addenbrooke's Hospital – BGU and Immunology [899]

Alder Hey Children's NHS Foundation Trust  
– Biochemistry Department [880]

Analytical Services International Ltd,  
St George's University of London –  
Forensic Toxicology Service [994]

Animal and Plant Health Agency – Veterinary labs [911]

Bio Predictive [Original report]

Bioscientia (Germany) [868]

Birmingham Children's Hospital NHS Foundation Trust  
– Clinical Chemistry [970]

Birmingham University Hospital NHS  
Foundation trust [895]

Brucella Reference Unit – Liverpool  
Clinical Laboratories, Royal Liverpool  
and Broadgreen Hospital [947]

Cambridge Clinical Laboratory [867]

Cambridge Life Sciences [997]

Cambridge Nutritional Science Ltd [Original report]

Cardiff and Vale University Health Board  
– Porphyria Service Cardiff [834]

Cardiff and Vale University Health Board –  
The Analytical Toxicology Department [998]

Douglass Hanly Moir Pathology  
(Australia) [Original report]

Epsom and St Helier University Hospital NHS Trust  
– Biochemistry Department [968]

Epsom and St Helier University Hospital NHS Trust  
– Immunology Department [968]

Epsom and St Helier University Hospital NHS Trust  
– Microbiology Department [951]

Eurofins – Biomnis (France) [950]

Great Ormond Street Hospital –  
Department of Chemical Pathology [964]

Great Ormond Street Hospital –  
Enzyme Unit, Chemical Pathology [964]

Great Ormond Street Hospital –  
Immunology Department [924]

Great Ormond Street Hospital –  
Neurometabolic Unit [964]

Guildford RSCH Trace Element Laboratory,  
SAS Trace Element Centre [955]

HCA Healthcare UK – HCA Laboratories [982]

HFL Sport Science (LGC Group) [861]

Igenomix UK [Original Report]

Imperial College Healthcare NHS Trust – Charing Cross  
Hospital, Chemical Pathology Department [912]

Imperial College Healthcare NHS Trust – Charing Cross  
Hospital, Infection and Immunity Department [962]

Imperial College Healthcare NHS Trust –  
Charing Cross Hospital, Medical Oncology [912]

Imperial College Healthcare NHS Trust –  
Hammersmith Hospital, Molecular Endocrinology [931]

Imperial College Healthcare NHS Trust,  
St Mary's Hospital – Virology Department [912]

Institute of Aquaculture – University of Stirling [1000]

Institute of Neurology – Neurogenetics Unit [975]

King's College Hospital – HMDC Laboratory  
for Molecular Haemato-Oncology [943]

Labor Augsburg MVZ GmbH (Germany) [900]

Latis Scientific [927]

LogixX Pharma Ltd [Original report]

London School of Hygiene & Tropical Medicine  
– Diagnostic Parasitology Lab [933]

Matrix Diagnostics [896]

Mayo Clinic Laboratories (Netherlands) [894]

## TDL Referral laboratories

- Meningococcal reference unit (Men RU)  
Manchester – Manchester Royal Infirmary [949]
- Micropathology Ltd [920]
- National Blood Service – Colindale,  
Red Cell Immuno Haematology Department [910]
- NHS Blood and Transplant – Birmingham [856]
- NHS Blood and Transplant – H & I Laboratory [855]
- NHS Blood and Transplant – Tooting [854]
- Norfolk and Norwich University Hospital NHS Foundation  
Trust – SAS Metabolic Bone Laboratory [993]
- Oxford University Hospital NHS Foundation Trust  
– Churchill Hospital [983]
- Queens University Hospital, Belfast –  
Institute of Clinical Science [853]
- Reflab (Denmark) [988]
- Reproductive Immunology Centre [839]
- Rosalind Franklin University (USA) - [Original report]
- Royal Berkshire Hospital NHS Foundation Trust  
– Clinical Biochemistry [849]
- Royal Devon and Exeter NHS Foundation Trust [838]
- Royal Surrey County Hospital –  
SAS Peptide Hormone Section [959]
- Sandwell and West Birmingham NHS Trust  
– City Hospital Birmingham,  
Clinical Biochemistry Department [970]
- Sheffield Children's NHS Trust –  
Clinical Chemistry [847]
- Sheffield Teaching Hospital NSH Foundation Trust  
– Protein Reference Laboratory Unit and  
Immunology Department [966]
- Southmead Hospital – Antimicrobial  
Reference Laboratory, Bristol [915]
- St George's University Hospital NHS Foundation Trust  
– Cell Marker Department [846]
- Synnovis – Guy's Hospital,  
Biochemistry Genetics Laboratory [930]
- Synnovis – King's College Hospital,  
Clinical Biochemistry [914]
- Synnovis – St Thomas' Hospital  
Haemophilia Centre [956]
- Synnovis – St Thomas' Hospital Immunohistology [961]
- Synnovis – St Thomas' Hospital Purine  
Research Laboratory [925]
- The Epilepsy Society (Chalfont Centre) [837]
- The Leeds Teaching Hospital NHS Trust –  
Endocrinology Laboratory (including SAS Steroid  
Centre), Department of Specialist Laboratory  
Medicine, St James University Hospital) [992]

# TDL Terms and Conditions of Business from 1st Jan 2025

The definitions which apply to these Terms and Conditions are set out in clause 19.

## 1 THE SERVICES

- 1.1 These Terms and Conditions and any applicable Service-Specific Terms will apply to any services or consumables that The Doctors Laboratory Limited or TDL Genetics Limited provides to the Client, unless those services are the subject of a separate written agreement signed by TDL and the Client. These Terms and Conditions and any applicable Service-Specific Terms apply to the exclusion of any other terms presented by the Client or implied by custom or course of dealing.
- 1.2 By submitting a Pathology Request, a request for any other services described in the Laboratory Guide or in any other proposal provided by TDL, or an order for any Consumables described in the Laboratory Guide (in each case an **'Order'**), the Client offers to purchase those Tests, other services or Consumables on these Terms and Conditions and any applicable Service-Specific Terms from TDL. TDL may accept or reject any Order.
- 1.3 A contract between TDL and the Client for the provision of Services and / or Consumables, incorporating these Terms and Conditions, and any applicable Service-Specific Terms, and the Order (an **'Agreement'**) takes effect when TDL confirms acceptance of the Client's Order in writing, logs the relevant Pathology Request in its laboratory information management system, or begins performing the Services (whichever occurs first). Any request for add-on Tests (as described in the Laboratory Guide) constitutes a request for further Services under that Agreement, which TDL may accept or decline. In the event of a conflict between the Order and these Terms and Conditions, the Terms and Conditions will take priority.
- 1.4 By Ordering a Service referred to in any Service-Specific Terms, the relevant Service-Specific Terms will apply to that Service in addition to these Terms and Conditions. In the event of a conflict between these Terms and Conditions or the Order and the Service-Specific Terms, the Service-Specific Terms will take priority.
- 1.5 TDL will provide the Services under the Agreement:
- 1.5.1 in accordance with Good Industry Practice;
- 1.5.2 in accordance with the UKAS medical laboratory accreditation standard (ISO 15189); and
- 1.5.3 using suitably skilled and experienced staff.
- 1.6 TDL will use reasonable efforts to achieve the Test turnaround times quoted in the Laboratory Guide, but does not warrant that it will achieve those times in the case of any particular Sample.
- 1.7 The Laboratory Guide sets out Sample rejection criteria. If the Sample meets those criteria, or if TDL considers that the Sample is otherwise unsuitable for Testing or

TDL is unable to conduct the Testing then TDL may decline to carry out the Testing under the Agreement and will be entitled to dispose of the Sample.

- 1.8 As part of its Services TDL will, on request, arrange for collection of Samples from locations within the M25 motorway. Such collection service is included within the price of the Test unless otherwise specified by TDL. Collection of Samples from locations outside the M25 is by special arrangement, and may incur an additional charge. Where collection by TDL has not been requested and agreed, the Client will be responsible, at its own cost, for the transport of Samples to TDL. Where TDL arranges collection of Samples it will use reasonable efforts to achieve the timescales it quotes for collection, but does not warrant that it will achieve those timescales in the case of any particular collection.
- 1.9 TDL may destroy or dispose of a Sample after completing the Testing or on termination of the Agreement, unless otherwise agreed in writing with the Client.
- 1.10 In providing the Services, TDL shall comply with all Applicable Law relating to anti-bribery and anti-corruption, including the Bribery Act 2010. TDL shall not, and shall ensure that its staff do not, engage in any activity which would constitute an offence under the Bribery Act 2010.
- 1.11 TDL is committed to trading ethically, with zero tolerance for modern slavery (including forced labour or human trafficking of any kind), human rights violations, and child labour. In performing its obligations under the Agreement, TDL will comply with all Applicable Law and applicable internal policies relating to anti-slavery and human trafficking.
- 1.12 TDL's laboratories are operated by members of the TDL Group. TDL uses those laboratories to undertake the Tests, except where TDL refers the Tests to suitably accredited laboratories operated outside the TDL Group. The UKAS accreditation numbers for the TDL Group laboratories in the UK are as follows: 8059 (HSL Analytics LLP) Genetics and Molecular Sciences, 8169 (HSL Analytics LLP) Blood Sciences, 8860 (HSL Analytics LLP) Infection Sciences, 8812 (The Doctors Laboratory Limited) Haematology, Blood Transfusion, Biochemistry, Microbiology, Molecular Biology, 10199 (The Doctors Laboratory Limited) Andrology, 8511 (HSL Analytics LLP) Cytology, 9706 (The Doctors Laboratory Limited) Urine Cytology.
- ## 2 SUPPLY OF CONSUMABLES
- 2.1 TDL shall supply Consumables to the Client in accordance with the terms of the Agreement.
- 2.2 The Consumables shall: (i) be of satisfactory quality (within the meaning of the Sale of Goods Act 1979) and fit for any purpose held out by TDL; and (ii) comply with all Applicable Law.

## TDL Terms and Conditions of Business from 1st Jan 2025

- 2.3 TDL shall not be liable for Consumables' failure to comply with clause 2.2 if: (i) the Client makes any further use of those Consumables after notifying TDL of such failure; (ii) the defect arises because the Client failed to follow TDL's instructions for the storage, use or maintenance of the Consumables or (if there are none) good practice regarding the same; (iii) the Client alters or repairs those Consumables without TDL's prior written consent; (iv) the defect arises as a result of fair wear and tear, deliberate damage, negligence, or abnormal storage or working conditions; or (v) the Consumables differ from their description as a result of changes made to ensure they comply with Applicable Law.
- 2.4 In the event the Consumables do not comply with clause 2.2, TDL shall provide replacement Consumables without undue delay. This shall be the Client's only remedy for such non-compliance. The terms of this clause 2 shall apply to any such replacement Consumables provided by TDL.
- 2.5 TDL shall ensure that the Consumables are properly packed and secured in a manner to enable them to reach their destination in good condition, and in a manner which complies with Applicable Law.
- 2.6 If the Client or the Client's carrier will collect the Consumables from TDL's premises, delivery shall be completed when TDL places the Consumables at the Client's disposal at TDL's premises. In all other cases, delivery shall be completed on the loading of the Consumables at the premises where they are loaded onto transport for carriage.
- 2.7 TDL may deliver Consumables by instalments, which may be invoiced and paid for separately. Time for delivery of Consumables is not of the essence of the Agreement and delays in the delivery of Consumables shall not entitle the Client to refuse to take delivery. TDL shall have no liability for any failure or delay in delivering Consumables to the extent that any failure or delay is caused by the Client's failure to comply with its obligations under the Agreement.
- 2.8 Title and risk in the Consumables shall pass to the Client on delivery, except that any biofreeze bottles provided by TDL shall remain the property of TDL at all times, regardless of any use by the Client of the biofreeze bottles.
- 2.9 The Client must not resell the Consumables or provide them to any third party without TDL's prior written consent.
- 2.10 The Client shall ensure that: (i) any Consumables provided by TDL are only used by healthcare professionals who are appropriately qualified and trained in the proper use of such Consumables; and (ii) the healthcare professionals use the Consumables in accordance with any instructions relating to the use of the Consumables provided by TDL and in any

event with the degree of skill and care reasonably to be expected of a healthcare professional experienced in the use of such Consumables.

### 3 PRICE AND PAYMENT TERMS

- 3.1 The price payable by the Client for the Services and / or the Consumables will be the most recent price confirmed by TDL to the Client in writing or by telephone prior to the Client submitting its Order. If TDL has not confirmed the price for the Services and / or Consumables, the price will be that indicated in the Laboratory Guide.
- 3.2 As at the date of these Terms and Conditions many of TDL's services are VAT exempt. All of TDL's prices are stated exclusive of VAT and where VAT is chargeable on the Services and/or Consumables the Client will pay it at the applicable rate.
- 3.3 Invoices are normally issued on a monthly basis, but TDL reserves the right to issue them more frequently. The Client will pay TDL's invoices under the Agreement within 30 days of the date of the invoice, without any deduction or set off. At TDL's option, interest may be charged on late payments at the statutory rate prescribed from time to time by regulations under the Late Payments of Commercial Debts (Interest) Act 1998. Invoices paid from outside the UK must be paid by either direct bank transfer or by cheque drawn on a UK branch. All payments will be made in pounds sterling.
- 3.4 If the Client disputes any invoice: (i) the Client shall notify TDL in writing as soon as practicably possible and in any event not later than 90 days after the date of the invoice, specifying the reasons for disputing the invoice; (ii) the Client shall pay to TDL all amounts not disputed by the Client as set out in clause 3.3 above; and (iii) the parties shall attempt to resolve the dispute promptly and in accordance with clause 18.1 below.
- 3.5 If the Client does not dispute an invoice in accordance with clause 3.4 above then the amount stated on the invoice shall be deemed payable by the Client and the Client shall not be entitled to dispute the amount invoiced.
- 3.6 Without affecting any of its other rights, TDL may suspend or cease provision of the Services and / or Consumables if the Client fails to pay an invoice due to TDL, or if the total of the sums payable by the Client to TDL under any agreements between the Client and TDL meets or exceeds any credit limit that TDL communicates to the Client from time to time.

### 4 CONFIDENTIALITY

- 4.1 TDL agrees that it will hold and maintain the confidence of:
- 4.1.1 all information of a confidential nature which is received by TDL from the Client or its patients in connection with the Services; and

## TDL Terms and Conditions of Business from 1st Jan 2025

4.1.2 all Test results, invoices and other information of a confidential nature issued by TDL to the Client or its patients in connection with the Services, and, save with the Client's consent or as otherwise permitted under the Agreement, will not disclose such information other than to its professional staff, independent consultants and/ or persons to whom it has delegated the performance of the Services and who require the information for such purpose. Where TDL has been provided with the details of a patient's private medical insurance in connection with the Services, TDL will be entitled to assume (and the Client so warrants) that both the Client and the patient consent to the disclosure of information relating to that patient to the insurer concerned.

4.2 The restrictions in clause 4.1 will not apply to information which: (i) was in TDL's possession prior to disclosure by the Client; or (ii) is now or hereafter comes into the public domain other than by default of TDL; or (iii) was lawfully received by TDL from a third party acting in good faith having a right of further disclosure; or (iv) is required by law to be disclosed by TDL; or (v) which is required by a regulatory or accreditation body to be disclosed to it for the purpose of regulating or accrediting the TDL Group.

### 5 CLIENT RESPONSIBILITIES

5.1 Except where TDL obtains the Sample directly from the patient during a home visit or at TDL's patient reception facility, the Client will ensure that the Sample is obtained from the patient, packaged, and labelled in accordance with Applicable Law good clinical practice and, if applicable, TDL's written instructions.

5.2 Except where TDL agrees to arrange transport of the Sample to TDL's laboratory, the Client will ensure that the Sample is transported to TDL's laboratory in accordance with Applicable Law and good clinical practice. Where TDL agrees to arrange transport of the Sample the Client will ensure that the Samples are ready for collection by TDL or its carrier at the agreed times.

5.3 The Client will ensure that all necessary consents and permissions are obtained and all necessary information provided to the patient, which is required under Applicable Law or good clinical practice in order to permit the performance of the Testing, and any other Services, and the use of the Protected Data as contemplated in the Agreement.

5.4 The Client will provide TDL with any information reasonably necessary for performing the Services and / or supplying Consumables, including by ensuring that the Pathology Request contains sufficient information regarding the Sample, the relevant patient, and the persons to whom the Test results are to be reported, and will ensure that any information the Client provides to TDL in connection with the Services and / or Consumables is accurate and complete.

### 6 LIABILITY

6.1 Nothing in the Agreement will limit or exclude any liability that cannot be limited or excluded under Applicable Law, for example liability for death or personal injury caused by negligence .

6.2 In these Terms and Conditions 'liability' means any liability whether in contract, tort (including negligence), misrepresentation, breach of statutory duty or otherwise, which arises in connection with the Services, the Consumables or under or in connection with any Agreement.

6.3 The liability of TDL and the Client will each be limited to £2,000,000 in total. This limit applies per Agreement and in aggregate for all Agreements made in a calendar year.

6.4 Neither TDL nor the Client will have any liability for:

6.4.1 loss of profit or revenue;

6.4.2 loss of anticipated savings;

6.4.3 loss of reputation or goodwill; or

6.4.4 indirect, special or consequential loss.

6.5 TDL will have no liability for any delay or failure in performance of the Services or provision of the Consumables arising from the Client's delay or failure in performing its obligations under the Agreement.

6.6 All of the warranties which TDL gives in relation to the Services and / or the Consumables are expressly set out in these Terms and Conditions. All other warranties, whether implied or express, are excluded from the Agreement where it is lawful to exclude them.

6.7 In this clause 6, references to TDL include the members of TDL's Group, and for the purpose of the limit in clause 6.3 the liabilities of TDL and the TDL Group Members will be counted in aggregate. The members of TDL's Group may enforce this clause 6.

### 7 FORCE MAJEURE

If the performance of any obligation under the Agreement (except for an obligation to pay) is prevented, restricted or interfered with by reason of circumstances beyond the reasonable control of that party obliged to perform it (a '**Force Majeure Event**'), the party so affected will be excused from any resulting failure or delay in performance, and the time for performance will be extended by an amount of time equal to the duration of the Force Majeure Event. The party so affected will use reasonable endeavours to mitigate the effect of the Force Majeure Event on its performance of its obligations. If the Force Majeure Event delays or prevents performance of a party's obligations for more than three months, either party may terminate the Agreement on written notice to the other.

## TDL Terms and Conditions of Business from 1st Jan 2025

### 8 DATA PROCESSOR AND DATA CONTROLLER

- 8.1 When TDL processes Protected Data on behalf of the Client in providing the Services the parties agree that the Client will be the controller and TDL will be the processor. The Annex to these Terms and Conditions sets out when TDL processes Protected Data on behalf of the Client. Clause 17 describes the circumstances where TDL will use Protected Data on its own behalf as controller.
- 8.2 When TDL processes Protected Data as processor, clauses 9 to 16 will apply in relation to the Protected Data. Where TDL processes Protected Data as controller, clause 17 will apply instead.
- 8.3 The Client will comply with the Data Protection Laws in relation to the Protected Data, and ensure that all instructions given by it to TDL in respect of Protected Data will at all times be in accordance with Data Protection Laws.

### 9 DATA PROCESSING INSTRUCTIONS

- 9.1 When TDL processes Protected Data as processor, TDL will comply with the obligations of processors under the Data Protection Laws.
- 9.2 Unless required to do otherwise by Applicable Law, TDL will (and will take steps to ensure each person acting under its authority will) process the Protected Data only in accordance with the Client's documented instructions as set out in the Order, pursuant to these Terms & Conditions, and in the Annex (the '**Processing Instructions**').
- 9.3 If Applicable Law requires TDL to process Protected Data other than in accordance with the Processing Instructions, TDL will notify the Client of any such requirement before processing the Protected Data (unless Applicable Law prohibits TDL from doing so).
- 9.4 TDL will promptly inform the Client if TDL becomes aware of a Processing Instruction that, in TDL's opinion, infringes Data Protection Laws. TDL will have no liability for any processing in accordance with those Processing Instructions after giving the notice. TDL's obligations under this clause 9.4 do not limit the Client's obligations under clause 8.3.

### 10 DATA SECURITY MEASURES

In relation to the processing of the Protected Data, TDL will implement and maintain, at its cost and expense, appropriate technical and organisational measures to ensure for the Protected Data a level of security appropriate to the risks presented by the processing, taking into account the state of the art, the cost of implementation and the nature, scope, context and purpose of the processing of the Protected Data, as well as the risk of varying likelihood and severity of the rights and freedoms of natural persons.

### 11 USING STAFF AND OTHER PROCESSORS

- 11.1 TDL will not engage any processor to process the Protected Data on the Client's behalf (a '**Sub-Processor**') without the Client's authorisation of that specific Sub-Processor. The Client will not unreasonably withhold, condition or delay such consent. By accepting these Terms and Conditions the Client authorises the appointment of the Authorised Sub-Processors.
- 11.2 TDL will ensure that each Sub-Processor is appointed under a written contract containing materially the same obligations as clauses 9 to 16 (inclusive).
- 11.3 TDL will ensure that all persons authorised to process Protected Data are subject to a binding obligation to keep the Protected Data confidential (except where disclosure is required in accordance with Applicable Law, in which case TDL will, where practicable and not prohibited by Applicable Law, notify the Client of any such requirement before such disclosure).

### 12 ASSISTANCE WITH THE CLIENT'S COMPLIANCE AND DATA SUBJECT RIGHTS

- 12.1 Taking into account the nature of the processing, TDL will implement and maintain reasonable measures to assist the Client to respond to the Data Subject Requests relating to the Protected Data that TDL processes on the Client's behalf. TDL will refer such Data Subject Requests it receives to the Client promptly, and in any event within five Business Days of receipt of the request.
- 12.2 TDL will provide such assistance as the Client reasonably requires (taking into account the nature of processing and the information available to TDL) to the Client in ensuring compliance with the Client's obligations under Data Protection Laws with respect to: (i) security of processing, (ii) data protection impact assessments, (iii) prior consultation with the relevant regulator regarding high risk processing, and (iv) notifications to the regulator and/or communications to data subjects by the Client in response to any Personal Data Breach. The Client will pay TDL's charges for providing the assistance in this clause 12, such charges to be calculated on a time and materials basis at TDL's applicable daily or hourly rates in force from time to time.

### 13 INTERNATIONAL DATA TRANSFERS

- 13.1 The Client agrees that TDL may transfer Protected Data to countries outside the United Kingdom for the purpose of providing the Services, provided all transfers by TDL of Protected Data to such recipients are in accordance with such safeguards or other mechanism(s) for transfers of personal data as may be permitted under the Data Protection Laws from time to time. The Client agrees that TDL may implement such safeguards by entering into standard data protection clauses authorised under the Data Protection Laws, subject to clause 13.2

## TDL Terms and Conditions of Business from 1st Jan 2025

13.2 Where the Client requires TDL to transfer Protected Data for the purpose of providing the Services to a country outside the United Kingdom which is not subject to an adequacy regulation under the Data Protection Laws (a **Third Country**) then:

13.2.1 the Client will enter into (or where relevant use reasonable endeavours to procure that the applicable third party recipient of the Protected Data enters into) standard data protection clauses with TDL authorised under the Data Protection Laws for the international transfer of personal data that provide sufficient safeguards for the relevant transfer, on terms acceptable to TDL (acting reasonably); and

13.2.2 where the data protection clauses referred to in clause 13.2.1 are not entered into, the Client will procure that prior to the transfer the relevant data subjects provide valid consent to the transfer for the purposes of the Data Protection Laws, and the Client will provide evidence of such consents to TDL on request.

### **14 RECORDS, INFORMATION AND AUDIT**

14.1 TDL will maintain, in accordance with the Data Protection Laws binding on TDL, written records of all categories of processing activities carried out on behalf of the Client.

14.2 TDL will, in accordance with the Data Protection Laws, make available to the Client such information as is reasonably necessary to demonstrate TDL's compliance with its obligations as a processor under these Terms and Conditions and the Data Protection Laws and allow for and contribute to audits, including inspections, by the Client (or another auditor mandated by the Client) to the extent reasonably necessary for that purpose, subject to the Client:

14.2.1 giving TDL reasonable prior notice and in any event not less than 30 days' notice of such information request, audit and/or inspection required by the Client;

14.2.2 ensuring that all information obtained or generated by the Client or its auditor(s) in connection with such information requests, inspections and audits is kept strictly confidential (save for disclosure to the relevant regulator or as otherwise required by Applicable Law); and

14.2.3 ensuring that such audit or inspection is undertaken during normal business hours, with minimal disruption to TDL's business, any Sub-Processor's business and the business of other customers of TDL.

### **15 BREACH NOTIFICATION**

TDL will, without undue delay, notify the Client of a personal data breach involving the Protected Data, and provide the Client with details of the personal data breach.

### **16 DELETION OR RETURN OF PROTECTED DATA AND COPIES**

TDL will, at the Client's written request, either delete or return all of the Protected Data to the Client in such form as the Client reasonably requests within a reasonable time after the end of the provision of the relevant Services related to processing, and delete existing copies (unless storage of any data is required by Applicable Law, in which case TDL will inform the Client of any such requirement). Where TDL will process that Protected Data as controller under clause 17, TDL may retain the Protected Data.

### **17 PROTECTED DATA THAT TDL PROCESSES AS A CONTROLLER**

17.1 TDL may process Protected Data as controller in the circumstances and for the purposes set out in TDL's Privacy Notice. In particular TDL may:

17.1.1 retain and submit the Protected Data to a Health Authority in the United Kingdom for the purposes of a Public Health Programme operated by that Health Authority, or to a regulator for the purpose of complying with regulatory obligations; and

17.1.2 retain and process Protected Data in its laboratory records in order to meet the requirements of the UKAS medical laboratory accreditation standard (ISO 15189) and implement the guidelines of the Royal College of Pathologists for the retention and storage of pathological records and specimens.

17.3 When TDL processes Protected Data to provide Non-Invasive Prenatal Tests, TDL does so as a controller.

17.4 When TDL processes personal data on its own behalf as controller, it will do so in accordance with the obligations of data controllers under the Data Protection Laws and with the applicable terms of the Agreement.

### **18 GENERAL**

18.1 Disputes

18.1.1 If any dispute arises relating to the Agreement or any breach or alleged breach of the Agreement, the parties will make a good faith effort to resolve such dispute without recourse to legal proceedings. If, notwithstanding such good faith efforts, the dispute is not resolved either party may submit the dispute to the jurisdiction of the English Courts.

18.1.2 Except to the extent clearly prevented by the area of dispute, the parties will continue to perform their respective obligations in respect to any existing Agreements while such dispute is being resolved.

18.2 Variation

## TDL Terms and Conditions of Business from 1st Jan 2025

- 18.2.1 TDL may amend these Terms and Conditions by updating the Laboratory Guide and providing the Client with a copy of the update or publishing it on TDL's website. Such amendments will only apply to an Order submitted after the date of the update, and the Client will be deemed to accept those amendments by submitting an Order after that date.
- 18.2.2 Except as set out in clause 18.2.1, any amendments to the Agreement will not be effective unless in writing and signed by an authorised signatory on behalf of each of the parties. The terms of the Agreement may be varied by agreement of the parties but without the consent of any third party whether or not the rights of such third party are affected by such variation. The Client will not unreasonably withhold, delay or condition its agreement to any variation to the Agreement requested by TDL in order to ensure the Services and TDL (and each Sub-Processor) can comply with any change in Applicable Laws.
- 18.3 Rights and waiver
- All rights granted to either of the parties will be cumulative and not exhaustive of any rights and remedies provided by law. The failure of either party to enforce (or delay in enforcing) at any time for any period any one or more of the terms of the Agreement will not be a waiver of such term or of the right of such party at any time subsequently to enforce all the terms of the Agreement.
- 18.4 Severability
- If any provision of the Agreement is or becomes invalid, illegal or unenforceable in any respect under any law, the validity, legality and enforceability of the remaining provisions will not be in any way affected.
- 18.5 Sub-contracting and Assignment
- TDL may assign or sub-contract the performance of the Agreement (in whole or in part) or any one or more of the Tests to be performed hereunder to any member of the TDL Group or any suitably accredited laboratories including those listed in the Laboratory Guide. The Client may not assign the Agreement or any of its rights or obligations hereunder without the prior approval of TDL.
- 18.6 Relationship of the parties
- It is acknowledged and agreed that TDL and the Client are independent contractors and nothing in the Agreement will create or be construed as creating a partnership or a relationship of agent and principal between the parties. The Client acknowledges and agrees that, in requesting Services from TDL, it is not acting as agent for any patient or patients to which the Services relate.
- 18.7 Notices
- All notices given under the Agreement will be in writing and will be delivered by hand or sent by prepaid first class post or by prepaid first class recorded delivery or by email transmission. All notices will be delivered at or sent, in the case of TDL, to: post The Halo Building, 1 Mabledon Place, London WC1H 9AX, email notices@tdlpathology.com and, in the case of the Client to the address and/or email address set out in the Order (or such other address as that party will notify in writing to the other for this purpose). A notice sent by post will be deemed to be served at 9.00 am on the second Business Day following the date of posting; a notice sent by email transmission will (provided the sender receives no error message indicating that delivery has been unsuccessful) be deemed to have been served at the time it is transmitted, if transmitted within business hours (9.00 am to 6.00 pm on a Business Day) or, if transmitted outside business hours, as soon thereafter as such business hours commence. This clause does not apply to the service of any proceedings or any documents in any legal action or, where applicable, any arbitration or other method of dispute resolution.
- 18.8 Entire agreement
- The Agreement is the entire agreement between the Client and TDL and supersedes and extinguishes all prior and contemporaneous agreements, promises, assurances, discussions, representations and understandings between them, whether written or oral, relating to its subject matter. Each party acknowledges that it has not entered into the Agreement in reliance on, and will have no remedies in respect of, any statement, representation, assurance or warranty (whether made innocently or negligently) that is not expressly set out in the Agreement except in the case of fraudulent misrepresentation.
- 18.9 Third parties
- The Agreement is not intended to create any rights for, nor be enforceable by, any third party except as set out in clause 6, and where the Client and the Doctors Laboratory Limited agree that these Terms and Conditions will apply to any Orders, that agreement is also for the benefit of and enforceable by TDL Genetics Limited.
- 18.10 Governing law
- The Agreement and any dispute arising out of or in connection with it (including non-contractual disputes and claims) or its subject matter or formation will be governed by and construed in accordance with English law and each of the parties submits to the exclusive jurisdiction of the English Courts.

# TDL Terms and Conditions of Business from 1st Jan 2025

## 19 INTERPRETATION

19.1 In these Terms and Conditions and the Annex:

'Agreement' has the meaning given in clause 1.3;

'Annex' means the annex to the Terms and Conditions;

'Applicable Law' means the laws, regulations and judgments binding on the relevant party, as amended from time to time;

'Authorised Sub-Processors' means:

a) Health Service Laboratories LLP and any other member of the TDL Group which provides the applicable Test or Service;

b) accredited specialist centres for onward referral of esoteric assays as identified in the TDL Laboratory Guide;

c) persons who provide information technology services that TDL uses in the course of providing the Services; and

d) any Sub-Processor referred to in the Annex;

'Business Day' means a day other than a Saturday, Sunday, or public holiday in England;

'Client' means the person or organisation requesting Services and / or Consumables from TDL and for whom TDL has agreed to provide the Services and / or Consumables;

'controller', 'data subject', 'data protection impact assessment', 'personal data', 'personal data breach', 'process' and 'processor' have the meanings given to those terms in the Data Protection Laws;

'Consumables' means any goods to be provided by TDL in order for the Client to benefit from the Services;

'Data Protection Laws' means the UK GDPR, the Data Protection Act 2018, and any other Applicable Law having effect in the United Kingdom concerning privacy or the use of personal data;

'Data Subject Request' means a request made by a data subject to exercise any rights of data subjects under Data Protection Laws;

'Good Industry Practice' means the standard of skill and care reasonably to be expected from a professional provider of the Services;

'Group' in respect of any undertaking, means such undertaking and its group undertakings ('undertaking' and 'group undertaking' having the meanings given in the Companies Act 2006);

'Health Authority' means (i) a department of the UK government or of a devolved administration, (ii) an executive agency of such department, or (iii) a body exercising statutory functions in relation to public health in the UK or any part of the UK;

'Laboratory Guide' means TDL's Laboratory Guide current at the time the Client submits the Order, as supplied to the Client or, if not so supplied, available on request from TDL, including any updates or supplements issued by TDL;

'Order' has the meaning given in clause 1.2;

'Pathology Request' means a request for Testing submitted by the Client in a format TDL accepts from time to time and by any of the methods TDL accepts from time to time, whether in hard copy or via one of TDL's electronic portals;

'Privacy Notice' means TDL's detailed Privacy Notice available at [tdlpathology.com](http://tdlpathology.com);

'Processing Instructions' has the meaning given to that term in paragraph 8.2;

'Protected Data' means personal data provided to TDL by the Client or a third party on the instructions of the Client, or collected or generated by TDL in the course of providing the Services or Consumables;

'Public Health Programme' means a programme administered by a Health Authority to monitor or analyse health data for the purpose of public health or for statistical, scientific or research purposes in the public interest;

'Sample' means a pathology sample provided by the Client to TDL for Testing;

'Services' means the services to be provided under the Agreement;

'Sub-Processor' has the meaning given in clause 11.1;

'TDL' means (i) The Doctors Laboratory Limited or, (ii) TDL Genetics Limited in the case of services offered under the TDL Genetics name;

'TDL Group' means TDL Genetics Limited and The Doctors Laboratory Limited and its Group and Health Service Laboratories LLP and its Group;

'Test' means a laboratory test to be carried out by TDL on a Sample, and 'Testing' means the process of conducting that Test and reporting the results;

'UKAS' means the United Kingdom Accreditation Service, or any successor to it;

'UK GDPR' has the same meaning as it does in section 3(10) of the Data Protection Act 2018, read with section 205(4) of that Act.

19.2 References to the singular include the plural and vice versa.

19.3 Clause headings and paragraph headings are for ease of reference only and are not part of these Terms and Conditions for the purpose of construction.

19.4 References to paragraphs are to paragraphs of the Annex.

# TDL Terms and Conditions of Business from 1st Jan 2025

- 19.5 Words following the terms 'including', 'include', 'in particular', 'for example' or any similar expression shall be construed as illustrative and shall not limit the sense of the words preceding those terms.
- 19.6 The Annex is incorporated into these Terms and Conditions.

## ANNEX

### 1 Subject matter and nature of processing

- 1.1 TDL processes Protected Data as processor on behalf of the Client:
- 1.1.1 in the case of Testing, when TDL receives a Pathology Request and Sample and processes the corresponding Protected Data to carry out the Test and report the Test results in accordance with the Processing Instructions;
- 1.1.2 when TDL carries out the Client's 'fee to patient' instructions, as described below; and
- 1.1.3 in the case of any other Services or the provision of Consumables, when TDL is required to process Protected Data on the Client's behalf to fulfil the Client's instructions.
- 1.2 The subject matter and nature of TDL's processing of the Protected Data are:
- 1.2.1 Samples and Test results for the purpose of providing clinical pathology Services;
- 1.2.2 information about clinicians who order Tests, for the purposes of reporting the Test results to the Client;
- 1.2.3 information about a patient's health insurance for the purposes of administering payment for the Services; and
- 1.2.4 billing information for a patient where the Client has asked TDL to direct TDL's invoice to the patient.

### 2 Duration of processing

The duration of the processing is the time necessary to carry out the Services or provide the Consumables.

### 3 Types of personal data

- 3.1 The Protected Data may comprise the following types of personal data:
- 3.1.1 name
- 3.1.2 gender
- 3.1.3 date of birth
- 3.1.4 address
- 3.1.5 identity numbers assigned by TDL or the Client
- 3.1.6 types of Tests conducted
- 3.1.7 results of Tests
- 3.1.8 health insurance policy details

- 3.1.9 billing information
- 3.1.10 the types of data referred to in the TDL Laboratory Guide

### 4 Categories of data subjects

The Protected Data concerns patients in respect of whom TDL conducts Tests, and clinicians who request Tests.

### 5 Reporting Test results

- 5.1 TDL will report Test results using the method selected by the Client from the range of options offered by TDL or, if no method is selected by the Client, using a method selected by TDL from that range of options.
- 5.2 TDL will report the Test results using the contact details supplied to TDL in the relevant section of the Pathology Request. The Client will be responsible for ensuring that those contact details are correct.
- 5.3 Where TDL supplies Test results electronically it will ensure that the results are supplied in the format selected by the Client (from the range of options offered by TDL) and are supplied to the address indicated when the Client selects electronic results reporting. The Client will be responsible for ensuring that the selected format is compatible with the Client's information systems and for making the results available to the users of those systems.

### 6 Fee to patient

Where the Client selects the 'fee to patient' option in a Pathology Request form, the Client instructs TDL to seek payment from the patient of the fees owed by the Client in respect of that test. The Client confirms that the patient has agreed with the Client to pay those fees to TDL for the Client. The Client instructs TDL to recover the fees by invoicing the patient using the personal data provided by the Client. The Client instructs TDL on the Client's behalf to appoint debt collectors to recover the fees from the patient if the patient does not pay the invoice by the date payment falls due. The Client authorises TDL to appoint those debt collectors as Sub-Processors in accordance with clauses 9 to 16.

# TDL Terms and Conditions of Business from 1st Jan 2025

## SERVICE-SPECIFIC TERMS OF THE DOCTORS LABORATORY FROM 1ST JAN 2025 FOR HISTOPATHOLOGY SERVICES

The definitions which apply to these Service-Specific Terms are set out in clause 6.

### 1 THE HISTOPATHOLOGY SERVICES

- 1.1 These Service-Specific Terms apply to any histopathology Services that the Client places an Order for, including any support for histopathology cases at multidisciplinary team ('MDT') meetings or preparation and investigation of frozen sections.
- 1.2 These Service-Specific Terms are in addition to the Terms and Conditions.
- 1.3 In the event that TDL's pathologist reasonably determines that it is necessary for a histopathology Sample to be referred for additional analyses (including special staining, immunohistochemistry and molecular diagnostics), the Test Turnaround times referred to in the Terms and Conditions will not apply and instead TDL will carry out the necessary analyses as soon as reasonably possible. TDL will use reasonable endeavours to inform the requesting clinician that additional analyses have been requested on that Sample.
- 1.4 Where a Client requests an Urgent Test, TDL will use reasonable endeavours to contact the referring clinician promptly to provide the initial and supplementary reports as required. The Client is responsible for ensuring that TDL is notified when the Client considers that a Test is Urgent. TDL reserves the right to suspend this aspect of the Service if it considers that the Client is sending an unreasonable number of Urgent Tests and the position cannot be resolved through good faith discussions between the parties within 30 days. **'Urgent'** means a Test which has been marked as urgent in the manner and under any conditions that TDL informs the Client that Tests may be marked as urgent.
- 1.5 TDL will use reasonable efforts to make its pathologists available on reasonable notice to discuss histopathology Test results and Reports with the Client.
- 1.6 The Client acknowledges and agrees that TDL's consultants may report on Samples by remotely reviewing digital images, provided that TDL will adopt Good Industry Practice in the production and review of such images.

### 2 STORAGE

- 2.1 TDL will store the Samples in accordance with the guidelines of the Royal College of Pathologists for the retention and storage of pathological records and specimens.

### 3 SUPPORT FOR MULTIDISCIPLINARY TEAM MEETINGS

- 3.1 TDL will, where agreed between the parties, provide the Sample slides and/or images and the relevant Report and associated documentation (together the 'Sample Information') at the relevant MDT meeting, provided that the Client:
  - 3.1.1 in relation to Sample Information which has been tested less than six months ago: requests the Sample Information no less than two Business Days in advance of the date of the MDT meeting where the Sample Information is needed;
  - 3.1.2 in relation to Sample Information which has been tested six months or more ago: requests the Sample Information no less than three weeks in advance of the date of the MDT meeting where the Sample Information is needed.
- 3.2 TDL will, where between the parties, arrange for a pathologist to attend and participate in MDT meeting(s) at the Client's request, provided that:
  - 3.2.1 the request for the pathologist to attend the MDT meeting is made no less than 10 Business Days in advance of the date of that MDT meeting;
  - 3.2.2 where the pathologist is asked to attend and participate in an MDT meeting which relates to a Sample that the pathologist did not personally review or a Report that they did not personally provide, there will be an additional cost to be agreed by the parties in advance of the pathologist's attendance at the MDT meeting.

### 4 FROZEN SECTIONS

- 4.1 If the Client wishes TDL to provide a frozen section Service, the Client must submit an Order for that Service no less than 10 Business Days in advance of the requested start date for the Service. The Client's Order must include details of the case and the clinical purpose of the frozen section, for example the margin clearance, the location where the Service is to be provided, whether the Client requires TDL to provide a cryostat and consumables, and any other information TDL reasonably considers necessary.
- 4.2 Where TDL provides a cryostat or other equipment or consumables in the course of the Service (**'TDL Equipment'**), title in the TDL Equipment will remain with TDL or TDL's lessor. Risk in the TDL Equipment will pass to the Client when TDL completes the delivery and (where relevant) installation of the equipment at the Client's Facility (as defined below) and will pass back to TDL when TDL removes the TDL Equipment from the Client's Facility. The Client will not permit any

## TDL Terms and Conditions of Business from 1st Jan 2025

person to use, move or modify the TDL Equipment, except a person authorised by TDL. The Client will indemnify TDL against any costs, claims, damage or loss arising from the loss, theft or destruction of, or damage to, the TDL Equipment which occurs whilst risk in the TDL Equipment lies with the Client, except to the extent caused by TDL or TDL's personnel.

4.3 Where TDL has not agreed to provide a cryostat or other equipment or consumables necessary for performing the frozen section Service, the Client will be responsible, at its own cost, for providing those items for TDL to use. Title and risk in a cryostat or other equipment or consumables provided by the Client (**'Client Equipment'**) will remain with the Client. The Client will ensure that the Client Equipment is fit for the purpose of providing the Services at all times, provided that the Client will not be liable for any failure in the Client Equipment caused by TDL or TDL's personnel.

4.4 Where the Client Orders a frozen section Service the Client will:

4.4.1 provide at the location where the Service is to be provided a room with a suitable water supply, sink and power supply, and access to a rest area and bathroom facilities for TDL personnel providing the Services at the location (the **'Facility'**). The Client will provide this Facility free of charge for the duration of the Services and a reasonable time after the end of the Services to allow TDL to recover any TDL Equipment from the Facility;

4.4.2 TDL has the right to decline to provide this Service with no liability to the Client if the Facility is not to TDL's reasonable satisfaction and/or the Facility does not meet the UKAS accreditation standard ISO15189;

4.4.3 ensure that the cryostat and associated Consumables and the Facility it is in are suitable for the purpose of TDL providing the Services required by the Client, to TDL's reasonable satisfaction;

4.5 TDL will provide a suitably skilled and experienced biomedical scientist at the Facility to prepare the Samples, including preparing glass slides during the frozen section procedure.

### 5 PRICING

5.1 The price payable by the Client for the Services will be the price agreed between the parties. If the Client submits an Order before the price has been agreed, TDL will not carry out the Services and will not be responsible for the Sample.

### 6 INTERPRETATION

6.1 In these Service-Specific Terms, any expressions defined in the Terms and Conditions and used in these Service-Specific Terms have the meaning set out in the Terms and Conditions.

6.2 In these Service-Specific Terms the 'Terms and Conditions' means the most recent version of the Terms and Conditions of Business of The Doctors Laboratory published on TDL's website.
