

DATAR
CANCER GENETICS

A MULTI-CANCER
SCREENING TEST

Rx Only

TrucheckTM

Intelli

What is Trucheck Intelli?

Trucheck Intelli is an advanced blood test that detects **Circulating Tumor Cells (CTCs)**, which may indicate higher risk of presence of solid organ cancers. This screening tool is recommended for asymptomatic individuals aged 40 and older, supporting earlier risk identification before clinical symptoms appear.

Important:

Trucheck Intelli is a **screening tool, NOT a diagnostic test**. A positive result does not confirm a cancer diagnosis but indicates higher risk and the need for further evaluation.

Limitations of the test:

- The test is designed for solid organ cancers only and cannot detect blood cancers (leukemia) or cancers of the lymphatic system (such as lymphoma).
- Trucheck Intelli does not replace single-organ screening tests including mammography, colonoscopy or other guideline recommended investigations.

Test Performance & Accuracy

88.24%
Sensitivity

Correctly identifies 88 of 100 cancer cases
(12% false negative rate)

96.3%
Specificity

Correctly identifies 96 of 100 cancer-free individuals
(4% false positive rate)

Understanding False Results:

A false negative result means cancer may be present but was not detected by the test. A false positive result means the test indicates an increased risk even though no cancer is present. In either case, additional clinical testing is required to clarify your status.

Understanding Your Results

What Your Test Result Means

CTCs Not Detected

Lower Risk Status

This indicates a lower likelihood of the presence of cancer at the time of testing. Annual Trucheck Intelli testing is recommended for ongoing monitoring and early risk assessment.

CTCs Detected

Higher Risk - Action Required

The result indicates an increased risk of the presence of cancer and requires further clinical evaluation through appropriate cross-sectional imaging and consultation with a healthcare professional. The organ of origin may or may not be identified.

Please Note:

Follow-up testing may show no evidence of cancer even after a positive result. In such cases, your physician may recommend close monitoring and repeat testing over time. Please carefully consider whether you are comfortable with this possibility before proceeding with the test.

Eligibility Criteria

Patient Eligibility

- Men and women aged 40 years and older, who have never been diagnosed with any cancer
- Currently asymptomatic (no cancer symptoms)
- No clinical or radiological suspicion of cancer

Age 35–40 with following conditions

- Family history of cancer or known carrier status
- Hereditary germline mutations
- Obesity or Type 2 diabetes
- History of infectious diseases (HPV, Hepatitis B/C)
- Documented exposure to carcinogens

Patient Ineligibility

- Current or past cancer patients (any type)
- Patients in remission after cancer treatment
- Monitoring one cancer while checking for others
- Ruling out cancer in benign conditions
- Clinical or radiological suspicion of cancer
- Blood transfusion within 72 hours
- History of lymphoma, leukemia, polycythemia, plasmacytoma, multiple myeloma, essential thrombocythemia
- Organ or bone marrow transplant recipients
- Pregnant individuals
- Immunocompromised status (HIV, immunotherapy)

Important Information

What You Need to Know

Clinical Study Performance:

Test performance characteristics are based on rigorous case-control clinical studies. However, real-world performance has not yet been established, and the company makes no claims that real-world results will mirror clinical study outcomes.

Biological Complexity:

Cancer screening and risk identification involves complex biological dynamics that is not fully understood. Always consult a qualified physician about whether Trucheck Intelli is appropriate for your individual circumstances before blood sample collection.

Continuous Improvement:

Test specifications are periodically upgraded as part of our commitment to advancement—updates may occur without notice.

Take Control of Your Health Journey

Early detection saves lives. Consult with your healthcare provider to determine if Trucheck Intelli is right for you.
