

"In a time of increasing disconnection from our natural roots, our work and vision serves as a revitalizing conduit that returns us to origin.

We forge a majestic bridge between the confusing concrete jungle and the primary forests of our Mother Nature, facilitating the **transformational** journey for mind and body."

#### 1. Neuroarchitecture

This field analyzes how built environments affect emotions and behaviors. DHECO<sup>TM</sup> aims to design ecosystems that improve homeostasis by positively influencing emotional states.

#### 2. Neuroaesthetics

Focuses on the biological responses to visual stimuli in architecture and design, aiming to evoke feelings of pleasure and transcendence through thoughtful aesthetics.

### 3. Environmental Psychology

Examines the relationship between humans and their environments, highlighting how both natural and built settings shape individual behaviors and emotions.

## 4. Neuro Design

Investigates how elements like color, texture, light, and space can influence mental and physical well-being, striving for designs that foster positive emotional experiences.

### 5. Biomimetic Design

Emulates natural systems and elements in human inventions to solve complex challenges, fostering a deeper connection with nature.

## 6. Biophilic Design

Incorporates natural elements into design to enhance connectivity with the environment, reflecting our evolutionary roots.

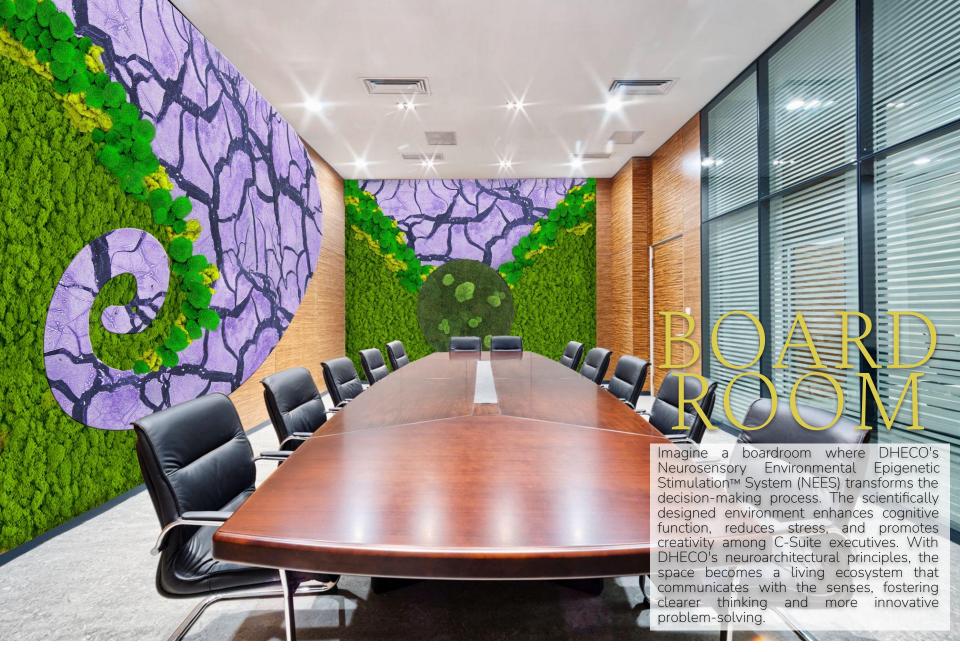

### 7. Biodesign

An interdisciplinary approach that studies biological systems to develop innovative solutions in design.

# MOSS LICHEN KHRETT 450 MILLION 2,5 BILLION 33YEARS

# Wisdom of existence, resistance and perfect evolution

- Cortisol Management: Scientific research has shown that exposure to nature can significantly help to manage cortisol and improve mental health. Our biophilic and biomimetic neurosensory designs, incorporating Moss, Lichen, and KHRETT™, leverage these findings to create spaces that promote well-being and productivity. Experience the transformative power of nature.
- Cognitive function: Science confirms with accuracy and amazement the extensive results that demonstrate that spending time in nature and using our perception in a fine-tuned way to receive its energy improves cognitive performance, memory and attention. Evolutive biology shows how we have being shaped also by the Mother Nature in terms of epigenetics.
- **Emotional well-being:** Science is not necessary to feel and describe the delicate texture, the brilliance of life in its colors and the charm of its great beauty, making Moss, Lichen and every creation of Mother Nature, evocative of calm and total peace.
- Spiritual Connection: The power of our faith and our own belief system in connection with Mother Nature represents the interaction between the power of our soul and the substance of God. Being surrounded by Mosses, Lichens and KHRETT<sup>®</sup> is a manifestation of evolution, bridging the gap between science and spirituality. These ancient life forms embody the tenacity and adaptability of life, serving as a testament to the interconnectedness of all living things.
- Reduced noise pollution: Moss, Lichen and KHRETT™ act as a natural soundproofing material, absorbing and dampening sound waves. Can be beneficial in reducing noise pollution and creating a quieter environment.

# MIMETIC DE.SI.GN

# SCIENTIFIC SUPPORT

Scientific evidence clearly shows the broad benefits of Neuroarchitecture, Neuro Aesthethics, Environmental Psychology and other sciences. The objective is to recover respect and love for Mother Nature, improve our wellness, quality of life and behavior towards other species.
