WHAT IS THE GUIDE FOR?

Target Audience

 Primary school teachers – to help integrate STEM education into their curriculum effectively.

 School administrators and policymakers – to develop and sustain strategic partnerships.

 Businesses and research organizations – to contribute expertise, mentorship, and industry insights.

 Universities and higher education institutions – to offer research collaborations, STEM training, and student outreach programs.

This guide has been developed under the STEM-IN project, financed by the Erasmus+, which aims to foster collaboration between schools, businesses, universities, and research organizations to enhance STEM education. As part of this project, the guide serves as a practical tool to help stakeholders establish, maintain, and sustain effective partnerships that integrate STEM learning into education systems.

Through this guide, educators and institutions can access best practices, real-world case studies, structured methodologies, and practical templates to support the development of impactful STEM collaborations. The recommendations provided herein are based on research, expert interviews

WHAT IS A STEM PARTNERSHIP?

A collaborative initiative between schools and external organizations to enrich STEM education by integrating real-world experiences, resources, and expertise into the learning process.

1 SCHOOL-BUSINESS PARTNERSHIP

These partnerships enable schools to connect with companies that provide real-world STEM applications, mentorship, and career exploration opportunities

2 SCHOOL-UNIVERSITY COLLABORATIONS

Universities partner with schools to provide research-based insights, advanced STEM training for teachers, and student-led innovation projects.

3 RESEARCH-BASED PARTNERSHIPS

Schools collaborate with research organizations to integrate cutting-edge scientific developments into STEM education and create innovative learning models.

STEM PARTNERSHIPS

Real life examples

01.

SCHOOL-BUSINESS PARTNERSHIP

This type of partnership involves schools working with businesses, corporations, or startups to bring industry knowledge and technological expertise into classrooms. Businesses provide mentorship, career exposure, and hands-on learning opportunities for students. They may also donate resources such as lab equipment, digital tools, or offer internships. This partnership helps students understand how STEM skills apply to real-world work environments.

SIEMENS STEM DAYS (GERMANY):

Siemens collaborates with schools to conduct hands-on workshops where students learn about renewable energy, automation, and smart technologies. The company provides industry professionals who mentor students and guide them through real-world engineering challenges. You can read more [HERE](#).

GOOGLE'S CODE NEXT (USA):

Google partners with schools in underserved communities to teach coding through a blend of in-person and virtual mentorship programs, giving students direct exposure to tech careers. You can read more [HERE](#).

Real life examples

02.

SCHOOL- UNIVERSITY COLLABORATIONS

Universities play a crucial role in shaping future STEM professionals, and partnering with them allows schools to tap into research, state-of-the-art laboratories, and expert faculty. These collaborations provide professional development for teachers and allow students to engage in research-based learning. Schools can host university students as mentors or invite professors for guest lectures.

OXFORD UNIVERSITY'S STEM OUTREACH (UK)

Oxford University is committed to widening its intake of students from all backgrounds. The university organizes workshops and laboratory experiences where high school students collaborate with researchers on real scientific experiments. You can read more [HERE](#).

MIT SCHELLER TEACHER EDUCATION PROGRAM (USA)

MIT works with high schools to design interactive STEM curriculum materials and provides teachers with professional training. The MIT Scheller Teacher Education Program and The Education Arcade focus on creating playful, powerful learning experiences using the affordances of new educational technologies. You can read more [HERE](#).

Real life examples

03.

RESEARCH-BASED PARTNERSHIPS

Research organizations work with schools to introduce students and teachers to the latest scientific discoveries and breakthroughs. These partnerships help bring innovation into classrooms through interactive research projects and experimental learning opportunities. It provides access to the latest research findings and their educational applications, as well as engages students in authentic research experiences and fosters curiosity.

CERN'S PHYSICS EDUCATION PROGRAM (SWITZERLAND)

The CERN Convention recognised the important role that the Laboratory could play in training future scientists and engineers. Indeed, CERN offers a unique environment for learning and training – a rich and stimulating melting pot of people and ideas including exceptional opportunities. You can read more [HERE](#).

NASA'S STEM ENGAGEMENT (USA)

NASA makes vital investments in a diverse portfolio of learning opportunities and activities designed to reach as many U.S. students as possible – from kindergarten through graduate school. NASA seeks to build the next generation STEM workforce and broaden student participation in STEM fields. You can read more [HERE](#).

STEM EDUCATION IS NOT JUST ABOUT LEARNING SCIENCE AND TECHNOLOGY

It's about fostering
curiosity, problem-
solving, and
innovation.

ESTABLISHING A STEM PARTNERSHIP

Creating and maintaining strong STEM partnerships requires a structured approach. Schools and organizations should focus on developing long-term relationships that benefit all stakeholders while fostering engaging, hands-on STEM experiences for students. Below is a detailed framework for establishing and sustaining impactful STEM collaborations.

1 Identify Needs and Goals

- **Assess STEM gaps in your school.** Identify areas where your school needs additional resources, training, or support (e.g., coding workshops, STEM career exposure, hands-on experiments).
- **Set clear objectives.** Define what you aim to achieve, such as increasing student interest in STEM careers, integrating industry technologies, or improving teacher STEM training.
- **Align with curriculum standards.** Ensure that the partnership supports national or regional STEM education objectives.

✓ **Tip** - Conduct a survey among teachers and students to determine their biggest challenges and needs in STEM education.

2 Find the Right Partner

- Consider a diverse range of partners. Look for businesses, universities, government agencies, and nonprofit organizations with a vested interest in STEM education.
- Match partners with your school's needs. If you need more digital resources, a tech company may be ideal for hands-on science projects, a university lab could be a great fit.
- Leverage existing networks. Use platforms such as Scientix, or EU STEM Coalition to find potential partners.

✓ **Tip** - Attend local STEM networking events or join LinkedIn groups focused on STEM education to connect with potential partners.

3 Approach and Engage Partners

- Create a strong pitch. Highlight the mutual benefits of the partnership, such as skill development for students, future workforce cultivation, and corporate social responsibility for businesses.
- Personalize your outreach. Research the organization and tailor your proposal to align with their mission and expertise.
- Offer flexible engagement opportunities. Some partners may prefer one-time events (e.g., guest lectures), while others may commit to ongoing mentorship programs.

✓ **Tip** - Use the email template included in this guide for outreach.

4 Develop a Collaboration Plan

- Define specific roles and responsibilities. Clearly outline what the school and the partner will contribute (e.g., schools provide space and student coordination; partners provide expertise and equipment).
- Set measurable outcomes. Establish KPIs such as student participation rates, the number of STEM activities held, or the number of students pursuing STEM careers post-partnership.
- Decide on the format of collaboration. Whether it's industry site visits, hands-on workshops, teacher training, or virtual mentorship programs.

✓ **Tip** - Use a Memorandum of Understanding (MoU) to formalize the collaboration. A template is provided in this guide.

5 Formalize the Partnership

- Draft and sign an MoU or Collaboration Agreement. Ensure all expectations, timelines, and commitments are clearly documented.
- Establish a communication plan. Regular check-ins between schools and partners ensure smooth collaboration.
- Assign a STEM coordinator. Having a dedicated contact person for managing the partnership streamlines operations.

✓ **Tip** - Hold an official kick-off meeting to align all stakeholders and define next steps.

THOUGHTS FROM THE EXPERTS

To create a practical and impactful STEM Partnership Guide, it was essential to listen to those who are shaping the future of education—teachers, school leaders, university experts, and industry professionals. That’s why, as part of the STEM-IN project, structured interviews and surveys were conducted across partner countries to capture the authentic voices of those working in schools, universities, and businesses.

These conversations provided rich, real-world perspectives on what makes STEM partnerships succeed—and where they often fall short. Experts highlighted both systemic challenges and untapped opportunities, all pointing toward a shared vision: that STEM education must be hands-on, engaging, and deeply collaborative.

Schools voiced a strong desire for support in accessing modern technologies and forming long-term relationships with external partners. Universities emphasized the need for sustainable frameworks and increased funding to maintain meaningful engagement with schools. Meanwhile, businesses expressed readiness to contribute but noted a lack of clear structures for partnership and communication.

The insights collected aim to equip educators, administrators, and decision-makers with the knowledge, and actionable strategies needed to build strong, sustainable partnerships that bring STEM to life for every learner.

From Schools

Educators are eager to integrate STEM into their curricula but face significant barriers, particularly a lack of resources (lab equipment, digital tools) and limited teacher training. Despite these constraints, there is strong enthusiasm for partnerships with external institutions, especially when they offer hands-on experiences and access to emerging technologies like AI, robotics, and VR.

“We need not just resources, but structured collaboration—programs that allow real exchange, mentorship, and visibility of STEM careers.”
— Primary School Teacher, Lithuania

Schools identified workshops, STEM kits, and mentorship from university students or professionals as the most valuable forms of support. Teachers noted that such engagement boosts both student curiosity and confidence in STEM subjects, particularly among underrepresented groups.

From Universities

University representatives emphasized the potential of structured, well-funded partnerships. They cited student-led research, teacher training, and university-led STEM workshops in schools as the most impactful formats.

Universities also stressed the value of integrating emerging technologies into school curricula and called for a more prominent role of digital pedagogy in teacher education programs.

Many voiced the need for systematic support from national policies and better visibility of funding schemes for STEM outreach.

“We are ready to collaborate, but partnerships need time, funding, and a clear shared mission.”
— STEM Program Coordinator, Spain

From Industry

Companies clearly see the value in engaging with schools but often lack structured channels to do so. They identify problem-solving, engineering, and digital literacy as the most critical skills for future employees and are open to mentoring, internships, and school visits.

Barriers include limited time, lack of shared goals, and unclear communication between sectors.

However, companies emphasized the potential of long-term partnerships, especially when outcomes are clearly defined and mutually beneficial.

“Schools should be bold. Reach out, propose ideas, and be ready to co-create.”

**— Digital Engineering Lead,
Lithuania**

Shared Vision for the Future

Across all sectors, there is consensus that **partnerships are not a luxury—they are essential**. When schools, universities, and businesses co-create learning experiences, they can bridge the gap between education and the real world. To do this effectively, all stakeholders called for:

- **Dedicated funding streams for cross-sector STEM programs**
- **Teacher training in digital and sustainability-focused STEM**
- **Partnership models that are structured, scalable, and adaptable**
- **Recognition of schools as equal innovation partners, not passive recipients**

The message is clear: strong STEM partnerships are a cornerstone of future-ready education. And by listening to the voices of those on the ground, we can build systems that are not only innovative—but also inclusive, practical, and impactful.

LEVERAGING DIGITAL TOOLS & EMERGING TECHNOLOGIES

Technology is transforming education, and STEM learning is at the heart of this revolution. The integration of Artificial Intelligence (AI), Augmented Reality (AR), Virtual Reality (VR), gamification, and online learning platforms can elevate traditional STEM education, making it more interactive, engaging, and future-ready.

Incorporating cutting-edge technologies in STEM teaching enables students to engage in immersive learning experiences that mirror real-world applications. These tools help to break complex concepts into visual, interactive, and hands-on experiences, making STEM subjects more exciting and accessible for students of all learning styles.

Let's dive into these:

-  Artificial Intelligence (AI)
-  Augmented Reality (AR) & Virtual Reality (VR)
-  Gamification
-  Online Learning & Collaboration Platforms

ARTIFICIAL INTELLIGENCE (AI) IN STEM

AI-powered tools personalize learning experiences and provide students with real-time feedback, helping them master STEM concepts at their own pace.

- AI-powered tutoring (e.g., ChatGPT, IBM Watson Tutor) enables students to receive instant explanations and problem-solving assistance.
- AI-based assessments analyze student performance and suggest personalized improvement plans.
- Machine learning projects introduce students to real-world AI applications, preparing them for careers in data science and engineering.

✓ **Best Practice** - The AI4K12 initiative provides AI-focused STEM curricula to integrate AI learning into classrooms. Learn more: [AI4K12](#)

Here are some great **FREE** applications worth exploring!

Application	Description	The link
Google Teachable Machine	Helps kids train their own AI models using images, sounds, and poses.	<u>HERE</u>
AI for Oceans	A simple game teaching kids how AI can be used for environmental conservation.	<u>HERE</u>
Quick, Draw! (Google AI)	A fun doodling game that teaches kids how AI learns from human inputs.	<u>HERE</u>
Machine Learning for Kids	Provides hands-on projects where students train their own AI models using Scratch.	<u>HERE</u>

AUGMENTED REALITY (AR) & VIRTUAL REALITY (VR) IN STEM

AR and VR allow students to experience STEM beyond textbooks, making abstract concepts tangible and interactive.

- VR-based science simulations (e.g., Labster) allow students to conduct chemistry and biology experiments safely in a virtual environment.
- AR-enhanced engineering and physics models bring theoretical concepts to life by overlaying digital elements onto real-world objects.
- Virtual field trips enable students to explore the inside of a human cell, travel through space, or visit historical scientific sites.

✓ Best Practice - The zSpace platform enables hands-on AR/VR STEM learning in classrooms. Learn more: [zSpace](#)

Here are some great FREE applications worth exploring!

Application	Description	The link
Google Expeditions	Allows students to take virtual field trips and explore the world.	<u>HERE</u>
National Geographic Explore VR	Provides immersive experiences to explore nature and geography.	<u>HERE</u>
VR Spacewalk (ISS Experience)	Let students experience what it's like to be an astronaut.	<u>HERE</u>
Titanic VR	A free educational VR app for history and science exploration.	<u>HERE</u>

Here are some great FREE applications worth exploring!

Application	Description	The link
Merge Cube	Allows students to hold digital 3D objects in their hands using AR.	<u>HERE</u>
QuiverVision	Kids can bring their coloring pages to life with interactive animations.	<u>HERE</u>
JigSpace	Let students explore 3D models of objects, from the human body to mechanical designs.	<u>HERE</u>
Google AR Animals	Allows students to place 3D animals in their environment using Google Search.	Search for any animal in Google on a mobile device and select "View in 3D."

Gamification enhances STEM education by increasing student engagement through game-based learning models and interactive challenges.

- Coding games and challenges (e.g., Scratch, CodeCombat) help students learn programming in an engaging way.
- Math and science gamification (e.g., Kahoot!, Prodigy) introduces competition-based learning, improving retention and problem-solving skills.
- Escape room STEM challenges encourage critical thinking and teamwork in real-time problem-solving scenarios.

✅ **Best Practice** - Code.org offers game-based coding lessons and challenges for students of all ages. Learn more: [Code.org](https://code.org)

Here are some great **FREE** applications worth exploring!

Application	Description	The link
Kahoot!	A quiz-based learning platform with interactive STEM challenges.	<u>HERE</u>
Scratch (MIT)	A beginner-friendly coding platform where kids can build interactive games and animations.	<u>HERE</u>
Prodigy Math Game	A math-based RPG game where kids solve problems to progress.	<u>HERE</u>
CodeCombat	Teaches coding using a gamified approach in Python and JavaScript.	<u>HERE</u>

ONLINE LEARNING & COLLABORATION PLATFORMS

The rise of remote and blended learning has made online platforms an essential part of STEM education. These tools enhance accessibility and collaboration, allowing students and teachers to engage with STEM content anywhere, anytime.

- Learning Management Systems (LMS) (e.g., Google Classroom, Microsoft Teams) streamline lesson delivery and student engagement.
- Collaborative coding environments (e.g., GitHub for Education) allow students to work on STEM projects remotely with peers.
- Online STEM courses and MOOCs (e.g., Khan Academy, Coursera) provide free, high-quality learning materials for students and educators.

✓ Best Practice: Microsoft's STEM Learning Hub offers free digital STEM resources for schools. Learn more: [Microsoft STEM Hub](#)

Here are some great FREE applications worth exploring!

Application	Description	The link
Google Classroom	A free platform for assigning and organizing classwork.	<u>HERE</u>
Microsoft Teams for Education	A digital hub for collaborative learning with built-in video calls.	<u>HERE</u>
Padlet	An interactive digital board where students can collaborate in real-time.	<u>HERE</u>
Flipgrid (by Microsoft)	Lets students record short video responses for classroom discussions.	<u>HERE</u>

MEMORANDUM OF UNDERSTANDING

Memorandum of Understanding (MoU)

This Memorandum of Understanding (MoU) is made and entered into as of [DD/MM/YYYY], by and between:

[Your School Name], located at [School Address], hereinafter referred to as "The School," and [Partner Organization Name], located at [Partner Address], hereinafter referred to as "The Partner."

1. Purpose

The purpose of this MoU is to establish a collaborative partnership between The School and The Partner to promote STEM education through joint initiatives, industry engagement, and academic collaborations.

2. Responsibilities

- **The Partner** agrees to provide mentorship, technical expertise, and industry insights to support The School's STEM programs.
- **The School** agrees to facilitate student participation and integrate STEM-based resources into the curriculum.
- Both parties agree to conduct at least [X] activities per academic year to foster student engagement.

3. Duration and Termination

This agreement shall remain in effect from [Start Date] to [End Date], unless terminated earlier by mutual written consent of both parties.

4. Signatures

Authorized Representative	Title	Date
[Your Name]	Representative, [School Name]	[DD/MM/YYYY]
[Partner Name]	Representative, [Partner Name]	[DD/MM/YYYY]

FORMAL EMAIL OUTREACH FOR POTENTIAL PARTNERS

Subject: Proposal for STEM Education Partnership Collaboration

Dear [Partner's Name],

I am reaching out on behalf of [Your School Name] to explore a potential collaboration in enhancing STEM education. Our school is committed to preparing students for the future, and we believe your expertise in [mention relevant area] could play a crucial role in shaping our STEM initiatives.

We would love to discuss how we can work together through:

- Guest lectures or industry visits
- STEM mentorship programs
- Joint research initiatives

Would you be available for a short meeting to explore possibilities? We look forward to your response.

Best regards,

[Your Name]

[Your School Name]

[Your Contact Information]

STEM EVENT PLANNING CHECKLIST

- ✓ **Set Clear Objectives.** Define the expected learning outcomes and key takeaways for participants.
- ✓ **Secure Funding & Sponsorships.** Identify potential sponsors or funding opportunities to support the event (if needed).
- ✓ **Confirm Guest Speakers & Industry Partners.** Connect with STEM professionals, educators, and experts early to ensure their availability.
- ✓ **Plan Logistics & Scheduling.** Organize event timelines, materials, and digital tools for seamless execution.
- ✓ **Boost Visibility & Engagement.** Promote the event through social media, newsletters, school networks, and community outreach.
- ✓ **Gather Insights & Measure Impact.** Collect participant feedback through surveys and discussions to assess success and future improvements.
