2 Reagent System

Features

Easy maintenance

- Two reagent system with low running costs.
- Auto clog prevention design.
- Using only one maintenance reagent.

High accuracy

- Bidirectional stereoscopic back-swirling design: prevent re-circulation of cell particles resulting in repeat count.
- Digital filtering algorithm: Automatic identification of interference signal to correct the symmetry of RBC histogram.
- Pulse recognition algorithm.

Effective result analysis

- Real-time display of reaction curve.

Easy operations

- 10.4 inches touch screen with vivid colors and intuitive interface.
- Small footprint, lyse inside the machine.

Improved supporting systems

- Large storage of 600,000 results.
