

Building a sustainable future from the ground and up

A climate-friendly solution, incorporating approximately 90% repurposed rubber from end-of-life-tires. The rubber is carefully crushed and selected for reuse. Thanks to their innovative and recyclable EPP base, they are significantly lighter and easier to handle than conventional alternatives. Their durable design makes them suitable for both indoor and outdoor use.

Benefits of Safe Tiles SBR

- ✓ Accessible for children and adults with disabilities
- ✓ Lifetime of 15+ years, see maintenance instructions
- ✓ Lightweight and easy to handle (thanks to the EPP base)
- ✓ Superior cushioning and shock absorption
