

- Chimneys and vents for gas appliances should also be cleared following a major snow or ice storm to enable proper venting, two-way air flow and to prevent equipment malfunction or CO poisoning. Make sure to locate your vents before the first storm of the season.

Don't

Do

- Remove snow and ice from the meter or appliance vent pipe carefully with a broom or by hand; do not kick your meter to break or clear ice. Do not use a shovel because it can damage the meter. After clearing snow from your roof, double-check to make sure your meter and vents are clear.
- Do not shovel snow up against the meter or vent pipe.
- Remove icicles from overhead eaves and gutters to assure dripping water does not splash and freeze on the meter or vent pipes. Contact a qualified roofing vendor if you cannot safely remove the snow and ice yourself.
- Clear a path to the meter so emergency responders and our employees have access.
