

CHARACTERISTICS

Luminaire control with wireless devices.

On, off and control of light intensity.

Control and creation of groups, scenes and animations.

'Smart Lighting'. Incorporation of sensors.

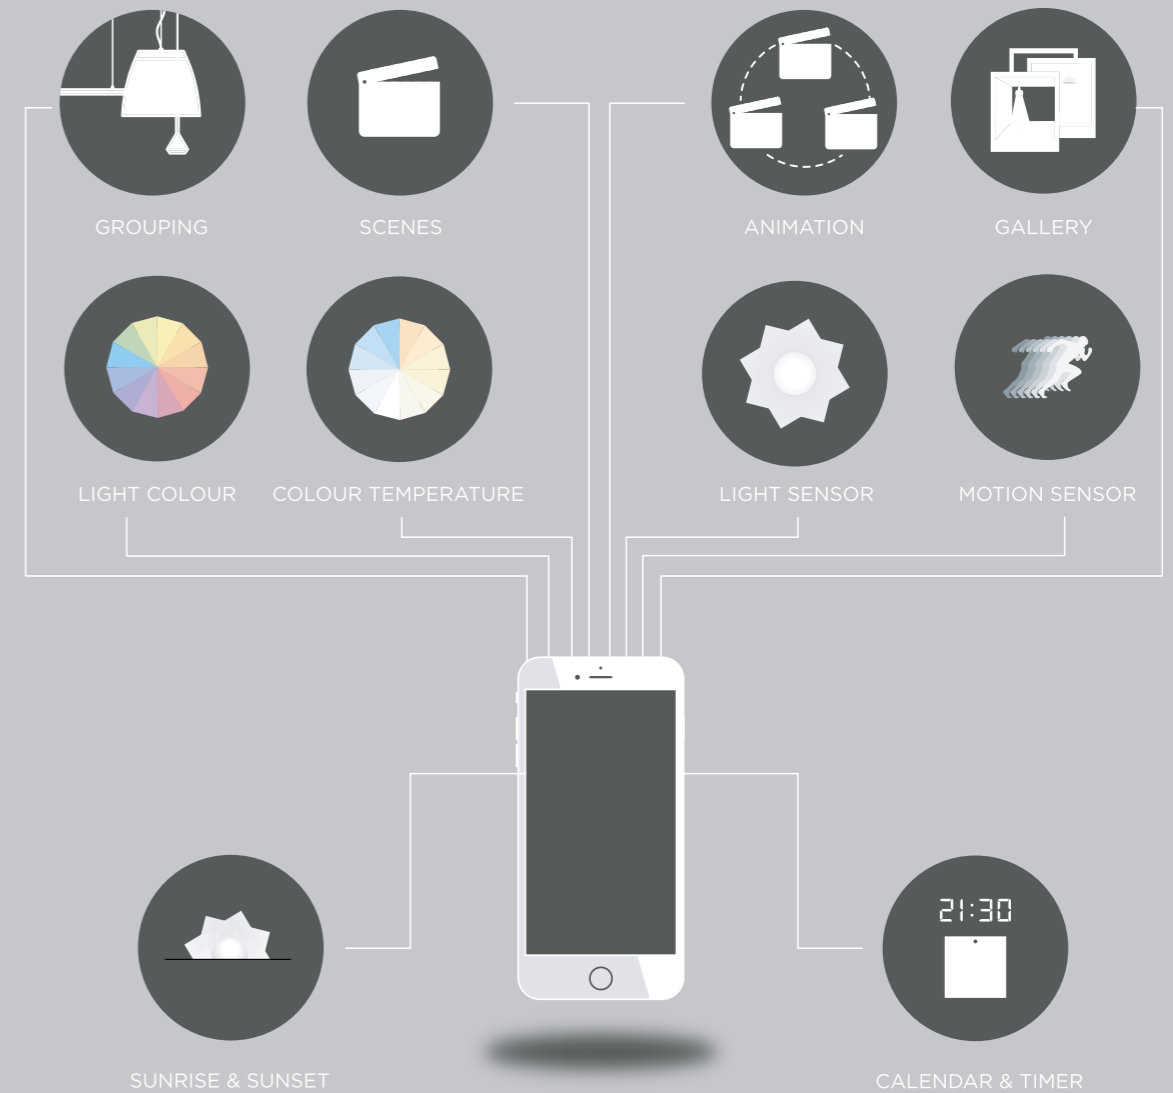

CCT Change technology.

Sunrise & Sunset Schedule programming.

LIGHT WITHIN YOUR REACH

POCHE-Control is a system that controls the functioning and features of our installation, thus helping to create the best light environment design. Groups of luminaires can be switched on and off, and scenes and animations can be created from any mobile device, by integrating technologies such as smooth dimming, color temperature changing and remotely programming the lighting activity of your area.

POCHE-Control communication protocol common in home automation (or smart home) which enables intelligent objects to communicate and use the same common language between them. It is already implemented in smart homes and buildings and its system is constructed with forward and backward compatibility in mind.

ADVANCED LIGHTING CONTROL

INDIVIDUAL/GROUP CONTROL

Individually control or group luminaires together, so they can quickly and simply undertake joint light functions.

SCENES

Design light scenes for different activities: Working, watching a film, a romantic date...

The set configurations will control the luminaires to reproduce the desired atmosphere, depending on the occasion.

ANIMATIONS

Create dynamic atmospheres to generate changes from one scene to another.

TIME PROGRAMMING

Establish a routine so that the light interacts with the space, depending on your personal timetable.

LIGHTING WITH 'SMART' TECHNOLOGY

POCHE-Control takes advantage of the technical potential of our luminaires, especially those with smooth dimming and Tunable White technology. The system permits configuring the correct light colour temperature and intensity to adapt to human needs in interior spaces. We can convert the space into a dynamic environment thanks to the active role of the light. All of this can be done easily from our device.

Further, thanks to the built-in Sunrise & Sunset Schedule, the APP analyses the time of sunrise and sunset -according to our location obtained by GPS- to achieve optimal light control throughout the whole day. This functionality can be combined with natural light sensors, to take advantage of the sunlight and favour energy saving.
