

REBIN TECH · PRE-SEED 2024

Turning Electronic Waste Into Global Value

AI-powered platform simplifying electronic waste collection, intelligent valuation, logistics, and global resource recovery for individuals, businesses, and organizations.

Built on 3+ years of real-world electronic waste trading and sourcing experience.

THE PROBLEM

Electronic Waste Is Everywhere.

Every day, devices are retired and stored — not recovered. The value inside stays hidden, and the volume keeps growing.

Repair Shops

Broken phones, batteries, and motherboards accumulating on shelves.

Businesses & Institutions

Computers, servers, and printers stored because disposal is difficult.

Universities & Schools

Lab equipment and devices retired each semester with no recovery path.

Hospitals & Government

Specialized electronics requiring compliant, certified disposal.

Households

Old devices in drawers — never recycled, never recovered.

Today's Disposal Process Is Broken.

Four critical failures

No Central Marketplace

Suppliers and buyers operate in silos with no shared platform.

Unclear Pricing

No standardized valuation every deal requires lengthy negotiation.

Storage Costs

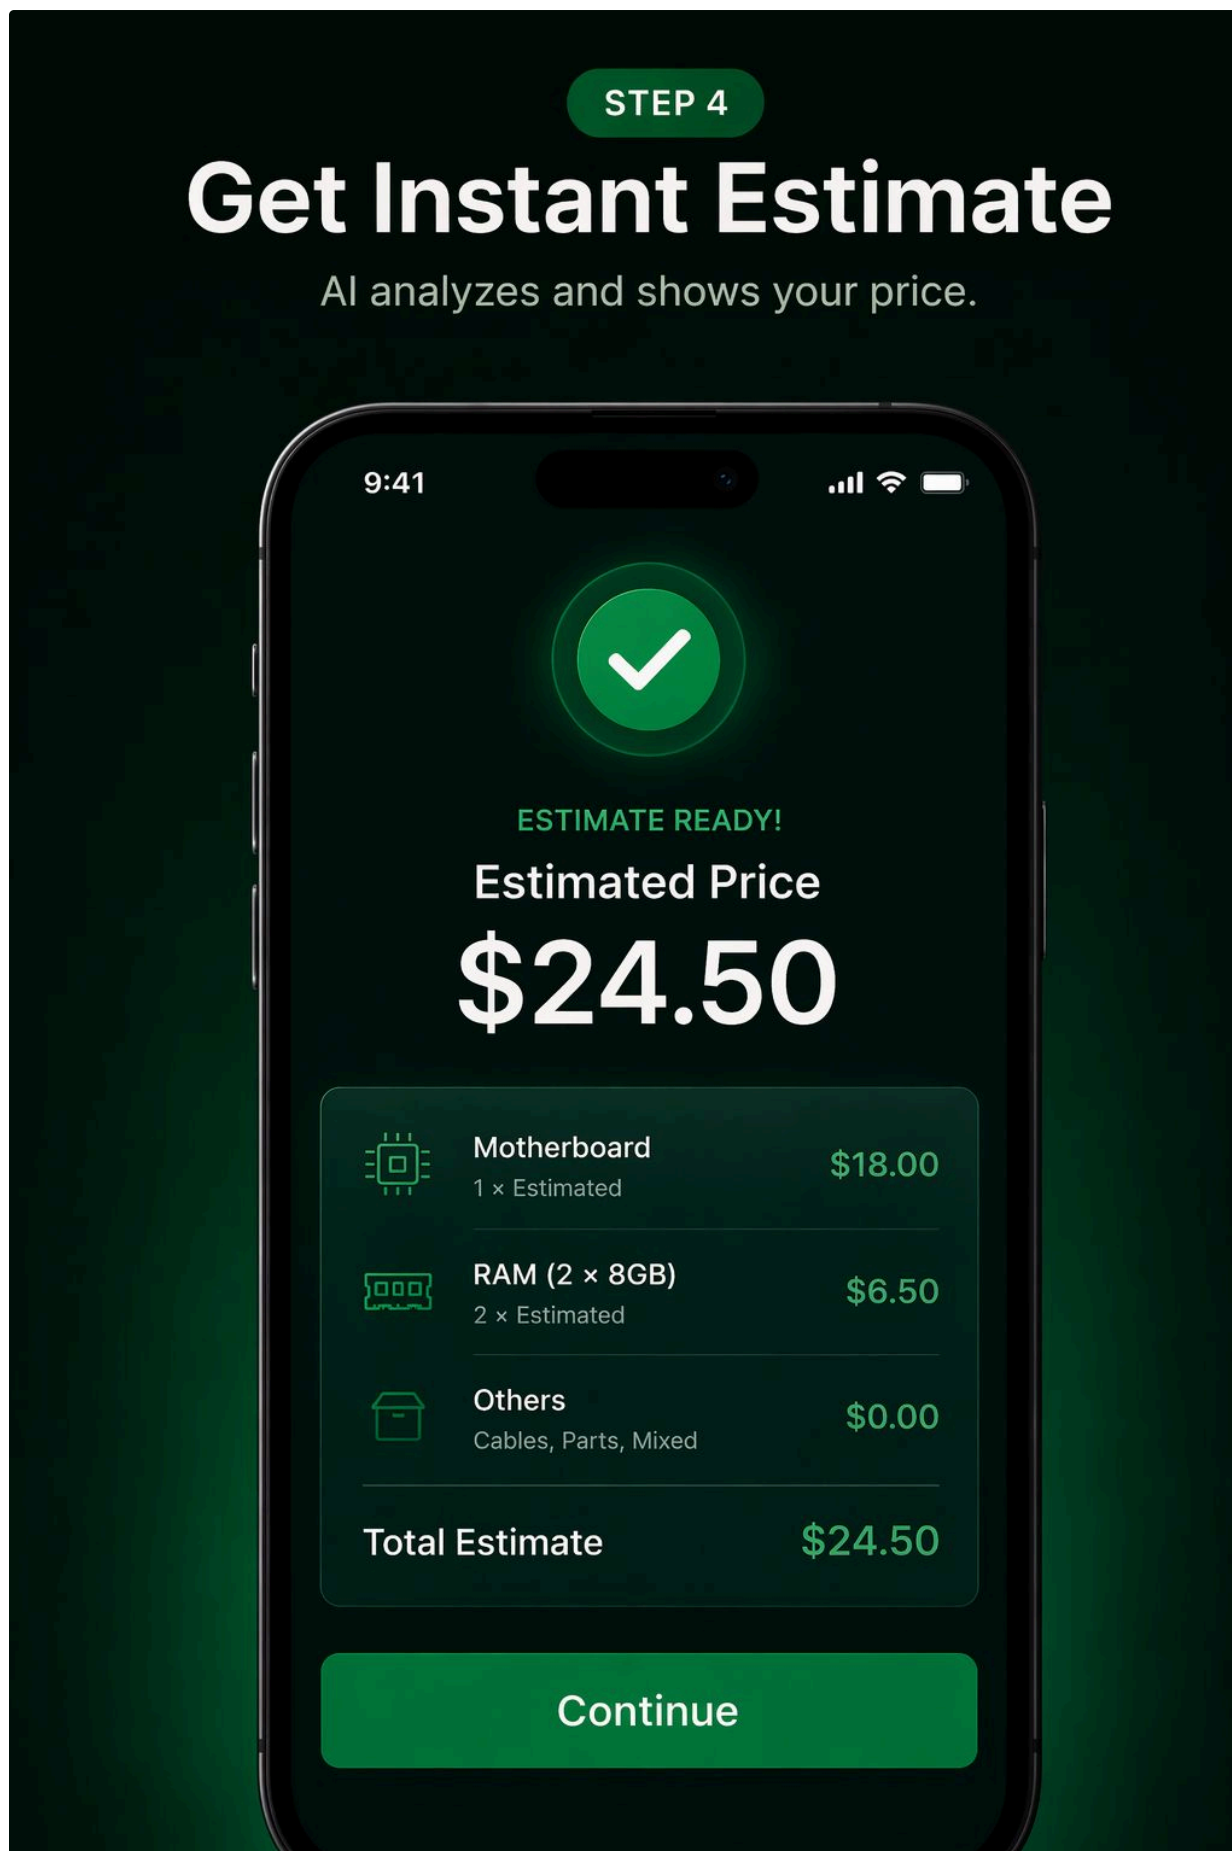

Businesses hold e-waste for months, incurring space and compliance costs.

Slow, Manual Process

Entirely offline no tracking, no accountability, no efficiency.

One Platform. Every Step.

A smarter way to manage electronic waste—from collection to global value recovery.

Easy Collection

Schedule pickups or drop-offs in minutes.

AI Valuation

Instant device assessment and pricing insights.

Smart Logistics

Track every shipment from collection to destination.

Global Marketplace

Reach verified buyers and recovery partners worldwide.

Real-Time Analytics

Monitor inventory, transactions, and environmental impact.

Why ReBin Tech Wins

AI-powered technology transforming electronic waste into greater economic and environmental value.

ReBin Tech Valuation

Every device is intelligently evaluated to maximize recovery value.

Global Market Access

Connect e-waste to the most valuable opportunities worldwide.

Data-Driven Decisions

Real-time insights improve pricing, inventory, and efficiency.

Circular Value Recovery

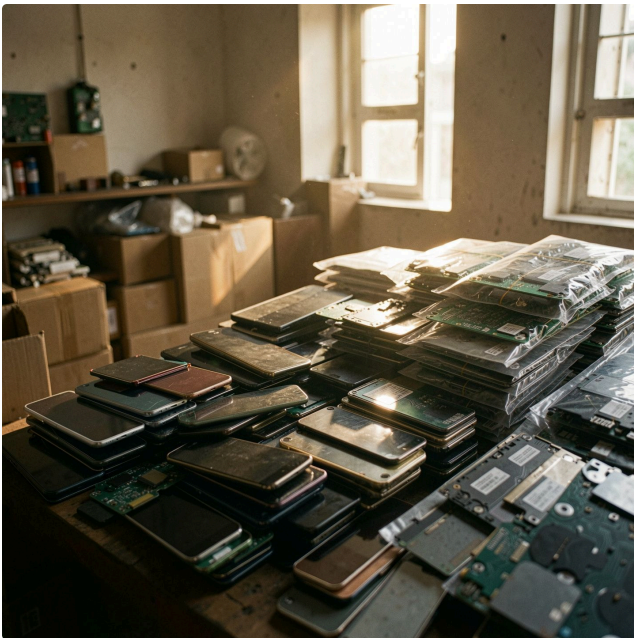

Maximize reuse, refurbishment, material recovery, and recycling.

Built to Scale

Digital platform for individuals, businesses, institutions, and enterprises.

From Concept to Real Transactions

ReBin Tech has already completed domestic and international e-waste transactions before launching the full digital platform.

Bangladesh Sourcing

Electronic waste collected and sourced through local supplier relationships.

Exported to Japan

Successfully completed international e-waste trading with a buyer in Japan.

U.S. Pilot Completed

Completed a U.S. pilot transaction with a positive profit margin.

The business model was validated through real transactions before platform development.

✓ International Trade Experience

✓ Profitable U.S. Pilot

✓ AI Platform Now in Development

Maximizing the Value of Every Device

AI evaluates every electronic device to identify valuable components, optimize recovery, and determine the best market opportunity.

Collection

Collect electronic waste from individuals, repair shops, businesses, universities, and organizations.

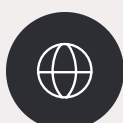

AI Evaluation

Analyze device condition and identify valuable electronic components.

Component Recovery

Recover valuable boards, chips, processors, memory, and reusable electronic components for resale and export.

Global Trade

Supply recovered components to domestic and international buyers through trusted trading networks.

Certified Recycling

Direct non-recoverable materials to certified recycling partners for environmentally responsible processing.

Not every electronic device should be recycled. AI helps recover the highest possible value before responsible recycling.

ROADMAP

Built for Long-Term Growth.

1

Phase 1 — Launch

Platform & mobile app launch

Supplier acquisition across key U.S. markets

Buyer network activation

2

Phase 2 — Scale

Expand across the United States

Grow logistics and collection capacity

AI-powered dynamic pricing live

3

Phase 3 — Global

Advanced processing & material recovery

Precious metal extraction capabilities

International expansion

Seeking \$1M Pre-Seed Investment

We are raising \$1M to scale ReBin Tech into the leading AI-powered electronic waste platform, expanding our technology, operations, and global supplier and buyer network.

AI Platform Development

Mobile & Web Application

Operations & Logistics

Global Buyer Expansion

Strategic Partnerships

\$1M

Pre-Seed Round

Use of Funds

Platform Development

Operations & Team

Sales & Marketing

Supplier & Buyer Expansion

Working Capital & Logistics

Meet the Leadership Team

A multidisciplinary team combining business strategy, AI, technology, and global operations to build the future of electronic waste.
