

Draw Your Tiny Code

A creative drawing activity that introduces DNA as tiny instructions inside our cells in a soft, child-friendly way.

Inside your body is a tiny code called DNA.

It helps make you you.

It can help shape your hair, your eyes, your smile, and many special things about you.

Let's imagine your tiny code with colors, shapes, and drawings.

This activity introduces DNA as tiny instructions inside our cells using simple language, drawing, and conversation.

What Makes Me Me?

Look in the mirror or think about yourself. What special things do you notice?

★ My eyes are: _____

★ My hair is: _____

★ My smile is: _____

★ My skin tone is: _____

★ Something special about me: _____

★ Something I share with my family: _____

★ Something that feels just like me: _____

DNA is not the only thing that makes you *you*. Your choices, your feelings, and the love around you matter too.

Draw Your Tiny Code

If your DNA looked like a secret drawing, what would it look like? Use colors, swirls, shapes, symbols, and tiny patterns to create your own tiny code.

What color would your tiny code be?

Would it have stripes, dots, swirls, or zigzags?

Would it look calm, bright, playful, or gentle?

What special things would it help tell about you?

My tiny code helps make my: _____

My tiny code reminds me of: _____

Talk About Your Tiny Code

Discussion Prompts:

What part of your drawing do you like best?

What colors did you choose, and why?

What special things does your tiny code help tell?

What do you share with your family?

What makes you wonderfully you?

Your DNA carries tiny instructions, but you are also shaped by love, learning, kindness, and the choices you make every day.

My favorite thing about me is: _____

Families can share many beautiful traits – and every child is wonderfully unique.
