ABOUT ME

I studied UX/UI design and back-end development at Noroff School of Technology in Norway, which gives me a complete view of how digital products get built. I design interfaces based on how people actually use software, and I build the systems behind them — REST APIs, database schemas, deployments in JavaScript. Working across both sides means I design with technical constraints in mind and build with the end user in mind. I like solving problems where user needs and technology meet, and I bring both perspectives to every product I work on. I'm looking for a role where I can put this combination to work and deliver real impact from day one.

WORK EXPERIENCE

Feb 2009 – May
2017

Sales Manager, Technology

- Managed client relationships and led a small team.

EDUCATION

- 2026 **Noroff School of Technology and Digital Media** Back-end Development
- 2025 **Noroff School of Technology and Digital Media** UI Designer
- 2024 **Noroff School of Technology and Digital Media** UX Designer

PROJECTS

UI Projects

Solar Smart

- Brand and product design for a renewable-energy company using solar-panel energy. Delivered an up-to-date logo, brand style guide, website, and design system to maintain brand reliability and market position.

UX Projects

Eco Travel

- A travel app designed to help users find sustainable accommodations, transport and activities. Researched user needs through surveys and literature review, built the concept using design thinking methodology.

Backend Projects

E-Commerce System (Full-Stack)

- Built a REST API with JWT authentication and a MySQL database in Third Normal Form. Created a separate admin front-end with ExpressJS and EJS, communicating with the back-end exclusively through the API. Tech: Node.js, Express, Sequelize, MySQL, EJS, JWT.

WeDeliverTECH Dashboard

- Built a delivery tracking dashboard with real-time late alerts. Developed using OOP principles and managed the workflow with Scrum sprints (JavaScript, HTML/CSS).

SKILLS

JavaScript, TypeScript, Node.js, Express.js, REST APIs, JWT Authentication, Sequelize, MySQL, MongoDB, Database Design (3NF), HTML, CSS, React, EJS, Vite, UX Research, UI Design, Figma, Git, npm, Docker, Postman, Scrum, OOP, Server Deployment
