ABOUT ME

I studied UX-UI design and back-end development at Noroff School of Technology in Norway. I spent a while learning how people use software before I moved to building the parts they don't see.

These days I mostly write JavaScript on the server side. REST APIs, database schemas, deployments. I like the kind of problem-solving where you figure out how data should flow and where things will break before they do.

Having a design background changes how I approach back-end work. I care about who's consuming an API, not just whether it returns a 200.

I'm a recent graduate looking for a junior back-end role where I can build real things and learn from experienced engineers.

WORK EXPERIENCE

Feb 2009 – May
2017

Sales Manager, Technology

- Managed client relationships and led a small team.

EDUCATION

Jun 2024

Noroff School of Technology and Digital Media UX designer

Jun 2025

Noroff School of Technology and Digital Media UI Designer

Jun 2026

Noroff School of Technology and Digital Media Back-end Development

PROJECTS

UI Projects

Solar Smart

- In this project, the Solarsmart brand is involved in renewable energy technology by using energy obtained from sunlight in solar panels.
- The brand needs to maintain and enhance its brand reliability by keeping up with technology and competitors in order to preserve its position in the market. For this, the logo, brand style guide, website, and design system need to be up to date.

UX Projects

Eco Travel

- A travel app designed to help users find sustainable accommodations, transport and activities. Researched user needs through surveys and literature review, built the concept using design thinking methodology.

Backend Projects

Reception Management

- WeDeliverTECH Dashboard — Front-End Project
- Built a delivery tracking dashboard with real-time late alerts. Developed using

OOP principles and managed the workflow with Scrum sprints.

- (JavaScript, HTML/CSS).

E-Commerce System

- Full-Stack Project
- Built a REST API with JWT authentication and a MySQL database in Third Normal Form. Created a separate admin front-end with ExpressJS and EJS, communicating with the back-end exclusively through the API.
- Tech: Node.js, Express, Sequelize, MySQL, EJS, JWT,

SKILLS

Back-End: JavaScript, TypeScript, Node.js, Express.js, REST APIs, JWT Authentication, Sequelize

Databases: MySQL, MongoDB, Database Design (3NF)

Front-End: HTML, CSS, React, EJS, Vite

Design: UX Research, UI Design, Figma

Tools & Methods: Git, npm, Docker, Postman, Scrum, OOP, Server Deployment
