About us

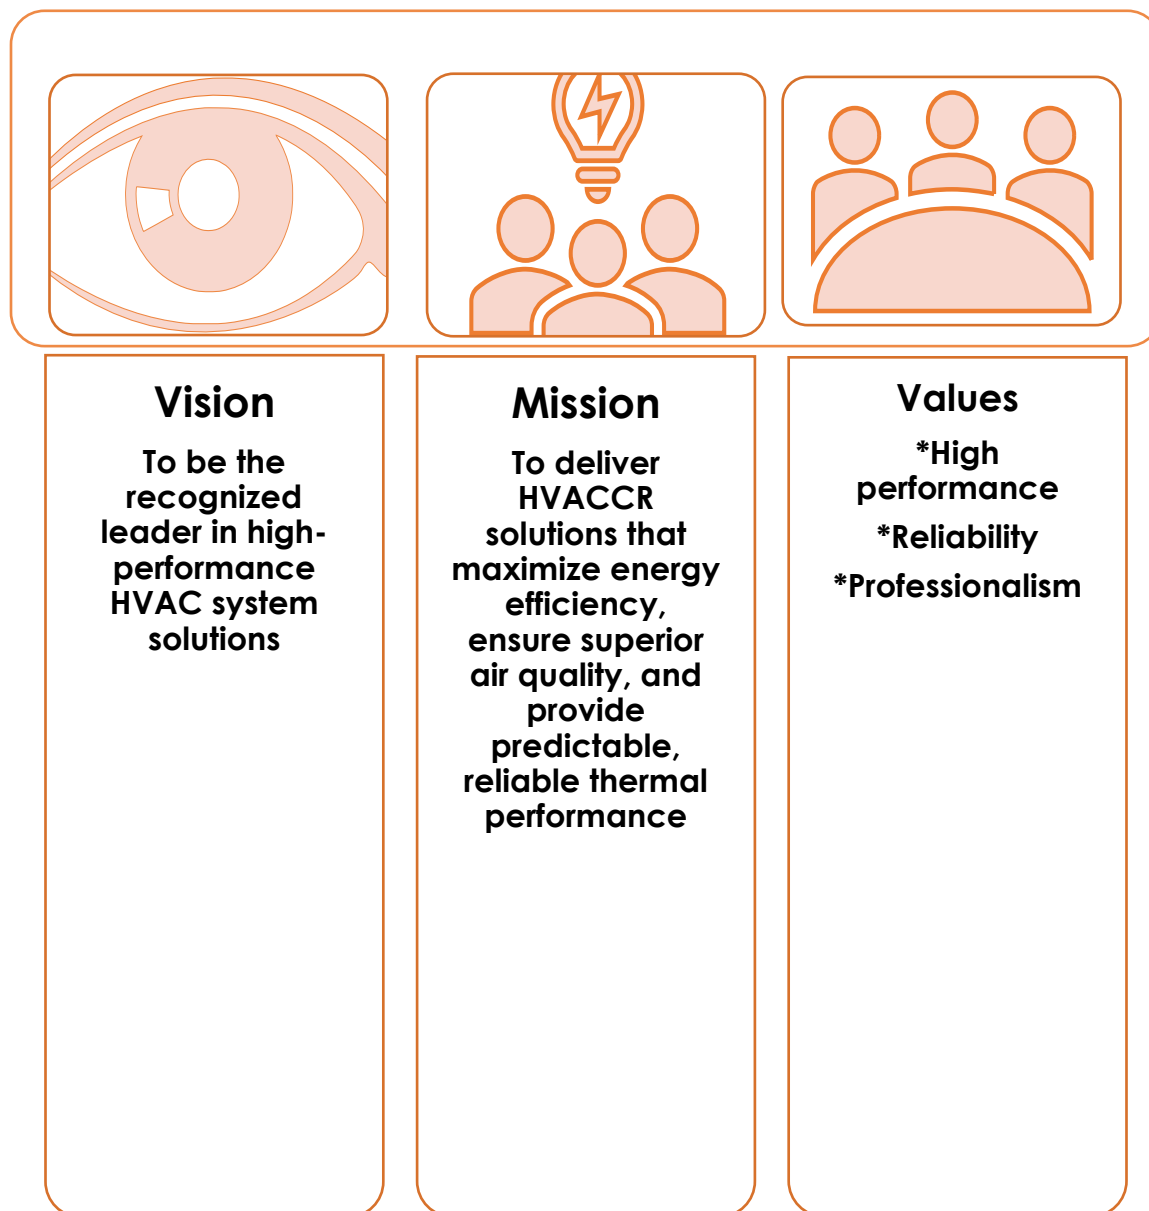

Chronoxflow Engineering (Private) Limited is a professional Heating, Ventilation, Air-conditioning and Refrigeration (HVACR) engineering and services company dedicated to delivering reliable, energy-efficient, and cost-effective solutions. Our work spans residential, commercial, industrial, and healthcare environments, where precision, safety, and performance are essential.

With a strong foundation in engineering professionalism and technical expertise, we specialise in the design, installation, maintenance, and optimisation of HVACR systems. Our team consists of qualified technicians, engineers, and project professionals who work together to ensure every project is completed to the highest industry standards and in full compliance.

We are committed to solving complex mechanical challenges, improving indoor air quality, and enhancing system efficiency through modern technology, innovative design, and data-driven maintenance practices. Our customer-focused approach means we prioritise clear communication, transparent pricing, and dependable support throughout the entire project lifecycle.

From emergency repairs to turnkey installations and long-term maintenance solutions, we deliver excellence with every job. Our mission is simple: to create safe, comfortable, and sustainable environments through engineering expertise and uncompromising service quality.

Vision, Mission & Values

Our 4 business units

1. Engineering and Turnkey Design

Our Engineering and Turnkey Design team provides clients with complete, end-to-end solutions that transform requirements into fully operational, energy-efficient systems. Using our technical expertise and advanced engineering design tools, we conduct full lifecycle engineering from initial assessments, load calculations, and conceptual design, to detailed mechanical drawings, equipment selection, and integration with building services. Our turnkey capability means we manage every stage of the project.

2. New Installations and Upgrades

We provide professional HVACR installations and system upgrades for new builds, expansions, and replacements. Our team handles everything from site assessment and equipment selection to full integration with electrical, civil, and control systems. We install a wide range of HVACR solutions, including VRV/VRF systems, chilled water plants, cold rooms, and ventilation systems. For existing facilities, we offer upgrades that improve efficiency and reliability. All work is completed to industry standards, ensuring safe, reliable, and high-performance operation.

Our 4 business units

3. Maintenance

We offer comprehensive HVACR maintenance services designed to keep systems running efficiently, safely, and reliably. Our maintenance programs include routine inspections, cleaning, lubrication, filter changes, performance testing, and early identification of faults to prevent costly breakdowns. By applying industry best practices and using quality-approved parts, we help clients extend equipment lifespan, reduce energy consumption, maintain compliance with regulations, and ensure consistent indoor comfort and environmental control.

4. Repairs and emergency work

We deliver fast, reliable HVACR repairs and emergency response to restore system performance with minimal downtime. Our team quickly diagnoses faults, replaces failed components, and resolves breakdowns such as refrigerant leaks, electrical failures, and temperature control issues. We prioritise safety, clear communication, and efficient turnaround to keep your facility operational at all times.
