**Nutrients**

## Nature Nutrients – Fulvi Doc (75%)

### **BENEFITS TO SOIL & PLANTS:**

- Are potent natural chelating agents converting metallic elements into easily absorbable, bio-available nutrients.
- Have the smallest molecular size of all, allowing rapid translocation of dissolved minerals through the plant cell walls.
- Has a very high Cation Exchange Capacity (CEC) of 1,400.
- Dissolve minerals and trace elements, improves availability of rock minerals, rock phosphates and lime.
- As an organic electrolyte balances & energises all cells.
- Enhance cell division and elongation.
- Detoxify pollutants in the soil.
- Improve water retention.
- Drought protection
- Build high brix levels in plants.
- Less wilting
- Improve Drought resistance of plants.
- Anti-freeze effect
- Enhance photosynthesis, especially during long cloudy periods.
- Increase permeability of plant membranes and improve nutrient uptake.
- Increase stomata opening to enhance transpiration.
- Improve microbial enzyme production.
- Fully organic & non-toxic.
- Are compatible with all fertilisers including liquid calcium nitrate, phosphate fertilizers, and sulphate-based trace elements.
- Can be combined with herbicides to enhance uptake and neutralise toxic residues – reducing glyphosate usage rates.

**This does not mean you do not use fertilisers! It means you use less, and where possible use friendlier blends.**
